Our Celebrated

Rotary Cutting Veneer Machines

made in over sixty sizes, have stood the test and proved equal to any proposition to reduce logs into thin lumber and veneers.

The product is high grade.
The output is great.
The cost of operating and maintenance is reduced to a minimum.
Quite a combination, is it not ?

Timber and mill owners should get in early.
Buy a Coe Veneer Cutting and Drying outfit and prepare to supply thin lumber and veneers which have a healthy growing demand. More money in it than sawing your logs into lumber.

PERFECT SWING SHINGLE MILL

Fitted with our Automatic Trip.

OUR Swing Shingle Mill is all iron and steel and has no complicated parts to get out of order. The saw collar can be removed in five minutes, and replaced by another without changing the set of the machine, thus saving much time when the saw is dull or injured. The machine is well adapted for cutting shingles, headings, etc. Each machine is fitted with our AUTOMATIC TRIP, whereby you get an evenly cut shingle, butt and point alternative, and, being automatic, requires no attention given to it while in operation.

CONFERENCE OF NEW BRUNSWICK LUMBERMEN

The Question of Stumpage and Reforestation Discussed with the Government.—Dues to be Increased.—Formation of a Limit Holders' Association.

Upon the invitation of Hon. A. T. Dunn, Surveyor-General of New Brunswick, a large number of the leading lumbermen of the province assembled in Fredericton, on August 5th, to discuss with the Government certain matters having an important bearing upon the lumber industry. Those in attendance included the following :

Premier Tweedie.
M. Welsh, Bristol.
A. H. F. Randolph, Fredericton.
R. A. Estey, "
Donald Fraser, jr. "
Timothy Lynch, "
John A. Morrison, "
James Robinson, M.P., Millerton.
Hon. Allan Ritchie, Newcastle.
E. H. Sinclair, "
James M. Scott, Dumfries.
A. J. Beveridge, Andover.
Charles Miller, St. John.

W. H. Berry, St. Stephen.
J. D. Irving, Buctouche.
C. H. Miller, Millerton.
B. McCormick, Blackville.
J. D. Phinney, Fredericton.
Arthur Glasier, Lincoln.

Preliminary to the conference the lumbermen formed themselves into an association, to be known as the Lumbermen and Limit Holders' Association of New Brunswick. Senator King was appointed chairman and R. A. Lawlor secretary.

After organisation and discussion committees were appointed to formulate the views of the association on the lumber industry of New Brunswick and to draft by-laws and a constitution.

At a subsequent meeting R. A. Lawlor sub-

HON. A. T. DUNN,
Surveyor-General of New Brunswick.

mitted a draft of the constitution which was taken up section by section and adopted. It provides that the organization will be composed of a president, a vice-president, a secretary-treasurer, who with one member from each county, represented in the association, will constitute the executive.

H. Hilyard moved that the office and place of meeting be at St. John. Hon. Allan Ritchie moved in amendment that Fredericton be chosen. The meeting decided in favor of St. John by a vote of 21 to 14. The membership fee was fixed at $15, and it was decided to assess limit holders according the number of miles held by them. The annual meeting is to be held on the first Tuesday in August. The following officers were elected for the ensuing year :

President—H. Hilyard, St. John.
Vice Pres.—Hon. Allan Ritchie, Newcastle.
Secretary-treasurer—R. A. Lawlor, Chatham.

The following, with the above named, constitute the executive :

Northumberland—W. B. Snowball.
Restigouche—Kilgour Shives.
Gloucester—T. M. Burns, M.P.P.
Kent—J. D. Irving.
York—A. H. F. Randolph.
Charlotte—John E. Moore.
Albert—C. T. White.
St. John—George McKeen.
Kings—H. White.
Madawaska—R. A. Estey.
Queens—Senator King.
Victoria—T. Lynch.
Sunbury—F. E. Sayre.
Carleton—M. Welsh.
Westmorland—F. W. Sumner.

Messrs. Henry Hilyard, K. Shives, E. Hutchison, John E. Moore, E. F. Vickery and Senator King were appointed a committee to present a memorial to the government on the stumpage question.

THE CONFERENCE.

The conference with the Government commenced at 10.30 a.m. on Wednesday, 5th ultimo. Hon. A. T. Dunn, Surveyor-General, occupied the chair, and opened the proceedings with the following address :

GENTLEMEN,—

It affords me very great pleasure to greet so many of you, who are deeply interested in the great lumber industry of the province, an industry which, both from the standpoint of the revenues derived therefrom, and the large number of people to whom it affords employment, is of the greatest possible importance.

The reasons which actuated the Government in calling you together are set forth in the following circular :

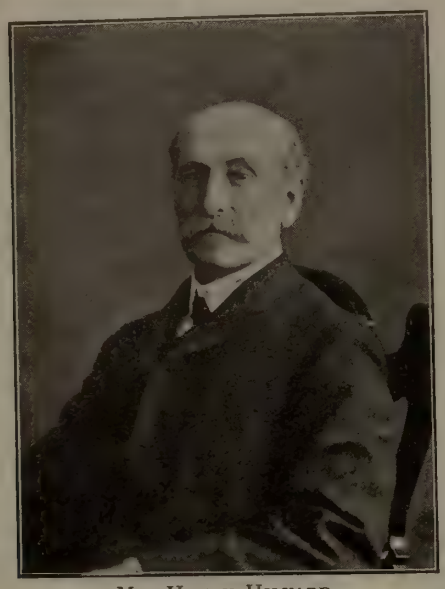
Crown Lands Office,
Fredericton, N.B., July 15, 1903.

Sir,—As you are aware, during the last session of the Legislature, it was announced by the Premier in the budget speech that it was during the present season. In view of that fact and considering the many very important questions connected with the administration of the crown timber lands of the province, such as protection against fire, re-afforestation, etc., after consultation with my colleagues, I have considered it advisable in the interest of the Department, as well as of licenses, that a conference of lumbermen and those interested in crown timber lands should be held at Fredericton for the purpose of considering these questions with a view to more fully protect and promote the interests of all concerned. I have therefore decided to fix the fifth day of August now next, at the Departmental building, Fredericton, at 10 o'clock a.m., for the purpose of such conference, and trust that you may find it convenient to attend, as I deem it most important that the meeting should be as large and representative as possible, it being my intention to secure the attendance of an expert in forestry, who will doubtless be able to furnish valuable information on this important subject.

I have the honor to be,
Your obedient servant,
ALBERT T. DUNN,
Surveyor General.

I beg to assure you that the Government, while desirous that the crown lands shall yield a fair revenue to the province, is most anxious that the stumpage shall be fixed at such a rate as will not bear hardly upon the lumber interests, or prevent those engaged in this important business from deriving an adequate return upon the capital invested.

As you are all aware, the demands upon the provincial treasury are very heavy. The grants required for roads and bridges, education, agriculture, maintenance of the Asylum, aid to hospitals, protection of the forests and the various other public services are constantly increasing, and in order to meet the pressing needs of our people in these respects, it is necessary to avail ourselves of all possible sources of revenue, and



MR. HENRY HILYARD,
President New Brunswick Lumbermen's and Limit Holders' Association.

we have therefore felt it to be our duty to consider carefully the question of an increase of stumpage, and as a result of our enquiries we have concluded that the time has arrived when a reasonable increase can properly be made.

You will, I think, agree with me that the policy of issuing long leases, which was adopted ten years ago, has resulted in material benefit to the lumbermen, while by reason of the greater inducement thereby given to the lessees to preserve and protect the forests, our timber lands are steadily increasing in value. In the larger areas of crown timber lands it is noticeable that during the last ten years fires have not proved so disastrous as formerly. The improved state of the lumber market has, of course, materially benefitted those engaged in the industry, and all will admit that it is in a much more prosperous condition than when the reduction of stumpage was made some years ago. Private land owners are reaping the benefit of this improvement by charging higher rates, and the government would be recreant to its duty if it did not proceed, though to a lesser extent, along the same lines.

In connection with this subject we have necessarily been called upon to consider whether we shall continue to exact a uniform rate of stumpage in respect of all crown lands, or whether there should be a difference in the rate, dependent upon the locality, the accessibility of the lumber, the facilities for shipment at all seasons, the nearness to markets, etc.

Your experience, gentlemen, as practical business men, will enable you to express a valuable opinion upon this question, and I shall be glad of any suggestions in reference thereto which you may be pleased to make.

The government has under consideration the appointment of permanent scalers, making them fire, game and fish wardens. My opinion is that this change will prove of public benefit. The department will be pleased to receive any suggestions which you may desire to make regarding this.

I shall also be glad to learn your views upon other subjects mentioned in my circular, and also upon any other matters connected with the lumber industry which you may think worthy of consideration by the government.

HON. A. T. DUNN,
Surveyor General.

THE PREMIER'S REMARKS.

Premier Tweedie, who spoke next, thought it was very gratifying to have such a large and representative meeting of the lumbermen of the province. He referred to the introduction a few years ago of the long term lease, which he thought had been of great benefit to the lumber interest. Since this policy had been adopted by the government lumbermen had taken greater precautions against fires and the result had been beneficial all round. The lumbering industry was by far the most important in the province, and a kind of partnership existed between the lumbermen and the government in regard to the industry. It was the duty of the government to give it every protection and encouragement. Lumbermen might say that they were not making any money at the present time, but it is a well known fact that the price of lumber is as high as ever it was, indicating that the industry is in a flourishing condition. Private owners of lands have reaped a benefit from the prosperity of the lumber industry by increasing the stumpage rate, while the government rate had remained stationary. Now it is proposed to make a change by making a slight addition to the stumpage rate. The industry he contended was in a much better condition than it was ten or fifteen years ago, and the lumbermen will be able to stand an increase of stumpage. It might be that in the future the industry would again become stagnant, and if so the government would be prepared to give relief by reducing the stumpage, as it had done on a former occasion. He hoped they would go into the question in a business like way. They were all interested in the welfare of the country, and were well aware that money contributed by them in increased stumpage would be for the benefit of the people. It was not the desire of the government to cripple any industry, but rather to encourage and assist all. He was very glad that the conference of lumbermen had been called, as it would furnish an opportunity for the discussion of other matters of interest in addition to the stumpage question.

THE FORESTRY QUESTION.

Mr. Frank C. Parker, of the New York Forestry Association, was next introduced by the surveyor-general, and addressed the meeting on reforestation. He spoke of the pleasure which it gave him to be present and meet the representative lumbermen and discuss with them the question of reforestation, in which he had been much interested for the past twenty-five years. He explained the methods employed by the New York Forestry Association for the preservation and promulgation of trees. The association planted a quantity of seed each year, and after a year or two's growth the trees are taken up and transplanted. The Association had, a short time ago, set out five hundred thousand trees in one tract and every one of them had shown good results. The question of reforestation is becoming of greater importance year by year, and he hoped the lumbermen of New Brunswick would become interested in it.

Mr. Parker answered a number of questions by Premier Tweedie, Hon. Mr. Hill and others, and gave evidence of possessing an immense fund of practical information on the subject.

On the subject of stumpage dues, Mr. F. Mooney said that he thought that under the terms of twenty-five year leases, the government had a right to increase the stumpage whenever they saw fit.

Mr. T. M. Burns thought that some allowance should be made to the lumbermen of Bathurst on account of the difficulties in shipping at that point. He did not favor a general increase of stumpage.

Mr. Sumner was of opinion that the government could not afford to discriminate in the matter of stumpage in favor of any locality.

The section of the surveyor general's address relating to the appointment of scalers and fire wardens was briefly discussed. Mr. Sumner thought the government should take the forest fire question in hand very strongly. It should be made an indictible offence for settler or sportsman to set bush fires. Fires set with the object of clearing land should be only under the supervision of the warden for that district.

Mr. Mooney did not think the proposal in regard to scalers and fire wardens went far enough. He advocated the adoption of a system like that in vogue in Norway, where men were employed in summer to go through the woods and mark all the trees that were fit to cut. With some such plan here he thought it would not be necessary to increase the stumpage.

Mr. Shives was glad to see the pulp industry

MR. R. A. LAWLOR,
Secretary New Brunswick Lumbermen's and Limit Holders' Association.

represented at the meeting. He was under the impression that the pulp men could find sufficient material in New Brunswick without cutting down a tree. He thought an arrangement could be made whereby they could use the slabs for pulp.

Mr. Mooney said he had tried that plan with the St. John mill men and it had not been a success.

The conference was looked upon as being of much benefit to both the Government and the lumbermen. It is understood that a memorial on the subject of stumpage dues is being prepared by the Association for presentation to the Government at an early date. It is also learned that the Government have decided to increase the dues, but the amount of the increase is still under consideration.

NEW BRUNSWICK TIMBER LICENSES.

ST. JOHN, N. B., August 24, 1903.

EDITOR CANADA LUMBERMAN:

DEAR SIR,—Referring to the recent conference of New Brunswick lumbermen with the Government, it may be of interest to your readers to learn some facts regarding stumpage and perpetual leases.

In the first place the stumpage charged is one dollar per thousand superficial feet, which the Government wish to increase to one dollar and fifty cents per thousand superficial feet. The lumbermen of New Brunswick claim that under the present scale they are actually paying more stumpage per thousand superficial feet to the Governmet than either Quebec or Ontario, as you will plainly see by the accompanying comparative statement.

In regard to the advantages of perpetual leases to the licensee, you are no doubt aware that the timber limits now held by lumbermen of this province were bought at a general sale at Fredericton, N.B., in 1893, and in some cases a number of miles have been purchased since for a term of twenty-five years, all of which expire at the end of the twenty-five years' term beginning at 1893. Now, if the holders of these limits are forced to give them up at the end of the above term, which has but fourteen years more to run, would it not be reasonable to believe that they will cut all the timber they possibly can, in many cases regardless of size, and they will not be so particular in protecting same from fire, etc., as they would if they had perpetual leases. I would further state that if they held the said limits under perpetual leases they would see that only the large trees would be cut, and that the forests in general would receive such protection that they would become of more value to the Government for the annual revenue derived therefrom than if allowed to be cut heavily until the end of the term and then resold to the highest bidder.

Yours truly,

A NEW BRUNSWICK LUMBERMAN.

COMPARATIVE STATEMENT OF NEW BRUNSWICK, QUEBEC AND ONTARIO (SCRIBNER) SCALES AND STUMPAGES PAID IN RESPECTIVE PROVINCES.

PULP WOOD OPERATIONS.

The Lake Superior Timber Company, of Port Arthur, Ont., are conducting extensive operations in pulp wood on their property situated along Nepigon straits and adjacent islands. Their lands are held in fee simple and therefore the wood can be exported to the United States. The illustration herewith shows camp No. 1, with two loaders in the centre of the storage boom. The wood shown is all in the main boom, and is a fair sample of the size and quality of the spruce they are cutting. They have about 8,000 cords held up on the creeks by lack of rainfall, which is expected out this month. This will make a total of 20,000 cords, or approximately 70 cargoes, shipped by the company this year, aside from piles or cordwood taken to Port Arthur and Fort William.

The past season has been very dry, but only trifling obstacles were encountered. Considerable summer cutting was done along the shores. This is the last season, we are informed, that the company will attempt summer cutting, and next season with four camps, containing about 400 men, it is expected to get out and ship at least 20,000 cords of pulp wood and 25,000 tamarac and spruce piles. Mr. Edwin F. Bishop is manager of the company.

CAMP NO. 1 OF THE LAKE SUPERIOR TIMBER COMPANY, SHOWING TWO LOADERS.

CHAMBERS OF COMMERCE CONGRESS.

[By our Special Representative.]

The sessions of the British Board of Trade and Chambers of Commerce held in Montreal were of especial interest to the lumber trade.

A large number of the Imperial delegates were directly interested in Canada's timber resources, representing the largest corporations in Great Britain.

Both Lord Brassey, the President of the Congress, and Lord Strathcona, were present throughout the proceedings.

Amongst those noticed in attendance was Mr. Shen Paget, a delegate from the Keighley Chamber, and a member of the firm of Smith & Paget's Crown Works, Keighley, machinery manufacturers. This firm has been established over fifty years and largely consumes Canadian maple, pine, spruce and birch timber. Mr. Paget is not only an ex-Mayor but an alderman and a justice of the peace.

Mr. J. C. Batley, who attended the Congress as a representative of the Heckmondike Chamber of Commerce, was up to recently a joiner and timber merchant.

Mr. S.B. Boulton, J.P., F.R.G.S., etc., of Totteridge, Herts, was the delegate representing the Timber Trade Federation of the United Kingdom. Mr. Boulton is of the firm of Burt, Boulton & Haywood, Ltd., of London, Paris and Riga, with the management of which business he has been actively connected for fifty years. The firm is engaged in the importation and sale of timber. He was vice-president of the London Chamber of Commerce for five years, and President of the West Ham Board for many years. His son, Mr. Harold E. Boulton, represented the latter board at the Congress.

Mr. Boulton was the founder of the Timber Trades Federation of the United Kingdom as well as the Federated Merchants' Freighters' Association (also connected with the timber trade), of both of which he was the first president. He advocates arbitration in labour difficulties and the closest practicable union between the colonies and the Mother Country.

Mr. Boulton is a well-known author, and a great contributor to scientific literature. In 1884 he obtained the Telford medal from the Institute of Civil Engineers for a paper on "The Antiseptic Treatment of Timber." He is 73 years of age and Deputy Leiutenant of the county of Hertfordshire.

A number of other prominent delegates at the Congress were connected with the timber trade.

J. R. H.

THE BURSTING OF EMERY WHEELS.*

Several years ago the writer was consulted regarding some points of a case in litigation occasioned by the bursting of an emery wheel and the resulting death of a workman. The question to be decided was whether the wheel was unsafe at the speed recommended by the makers, or whether the accident was due to the carelessness of the operator.

As it was just then an "off" year for experiments on fly-wheels there seemed to be no good reason why the same medicine could not be tried on emery wheels. The apparatus already described in former papers read before this Society, with some slight alterations, was adapted to the new requirements, and in the spring of 1902, fifteen wheels of various makes were tested to destruction.

TABLE.

No. of Test.	Grade Mark.	No. of Emery.	Working Speed. Revs. per Minute.	Working Speed. Feet per Minute.	Bursting Speed. Revs. per Minute.	Bursting Speed. Feet per Minute.	Speed Ratio.	Factor of Safety

Tests 6 and 7; wheels made with wire netting; tests 14 and 15, with vulcanized rubber.

For the actual details of the work credit is due to Messrs. Chandler and Krueger of the class of 1902, Case School of Applied Science. Most manufacturers of this class of wheels test them for their own information, but the results are not generally given to the public; the writer knows of no published data on this subject. At the Norton Emery Wheel Works, all wheels are tested before leaving the shop at a speed double that allowed in regular service, and occasionally wheels are burst to determine the actual factor of safety.

Emery-wheel accidents are not uncommon, but can usually be traced to the carelessness of the operator. One common cause of failure is allowing a small piece of work to slip or roll between the wheel and the rest. The writer was once present on an occasion of this kind, and although he fortunately was not in the plane of rotation, he has never forgotten his sensations.

The wheels selected for the experiments were all of the same size, being sixteen inches in diameter by one inch thick, and having a hole one and one-quarter inches in diameter.

*Papar read before Saratoga Convention of A S. M. E., by Prof. C H. Benjamin.

The object of the experiment being to determine the bursting speed of such wheels as are actually on the market, emery wheels were obtained through various outside parties without indicating to the agents or manufacturers the use to be made of them.

In this way wheels of six different makes were obtained, the label on each wheel showing usually the maker's name, the grade number or letter, the quality of emery, and the speed recommended for use. As shown in the table of results, the working speed varied in the different wheels from 1,150 to 1,400 revolutions per minute, the average being about 1,200 revolutions per minute. For a diameter of sixteen inches this corresponds to a peripheral velocity of about 5,000 feet per minute. The table also shows that the fineness of the emery varied from ten to sixty, the average being about thirty.

The wheels were held between two collars, each six and one-eighth inches in diameter and concaved, so as to bear only on a ring three-fourths of an inch wide at the outer circumference.

The method of testing, and the apparatus used, were precisely similar to those described in the paper on "The Bursting of Small Cast-iron Flywheels," by the author at a previous meeting, to which reference is made for illustrations of the apparatus.

The table shows the results of the experiments in detail, and needs but little explanation. The illustrations, Figs. 1 to 6, show characteristic fractures, and the appearance of various wheels after bursting.

Wheels numbered 1, 2, and 3 were of one make, and show a remarkable uniformity in strength. (Fig. 1.)

Nos. 4, 5, 8, and 9 were all made by one firm; the two latter wheels were of finer grain than the others, and show a correspondingly greater strength. (Fig. 3.)

Nos. 6 and 7 contained a layer of brass wire netting imbedded in the emery, and were about one-third stronger than the average of the ordinary wheels. (Fig. 2.)

The wheels numbered 10 and 11 were the weakest among those tested, but have an apparent factor of safety of between five and six. (Fig. 4.)

Nos. 12 and 13, of still another make, burst at about the average speed. (Fig. 5.) Wheels Nos. 14 and 15 were so-called vulcanized wheels, containing rubber in the bond, and intended for particularly severe service. These showed, as was expected, rather more than the average strength. (Fig. 6.)

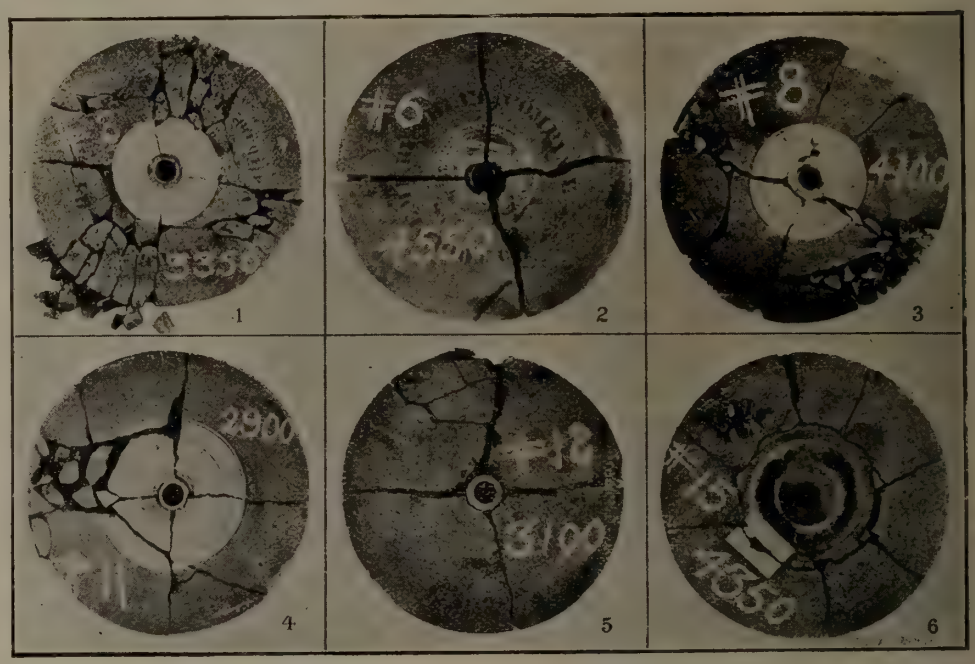
An examination of the last two columns in the table shows that the wheels burst at speeds varying from two and one-quarter to three and three-quarters the working speed, and accordingly had factors of safety varying from five to thirteen.

It is then apparent that any of these wheels were safe at the speed recommended, and would not have burst under ordinary conditions. At the same time, considering the violent nature of the service and the shocks to which they are exposed, it would seem that the factor of safety for emery wheels should be large. In comparison with those generally used in machines, a factor of eight or ten would seem small enough.

It may also be said that such a variation in strength between wheels of the same make and grade, as for instance that between Nos. 4 and 5, indicates a lack of uniformity which causes distrust.

The fractures were in the main radial, as may be seen from the cuts, the wheel splitting in three, four or five sectors as might chance.

It may be assumed that these radial cracks started from the rim where the velocity and stress were greatest, but it is a fact worthy of notice that in nearly every instance the cracks radiated from points where the lead bushing projected into the body of the wheel.



RESULTS OF EXPERIMENTS ON EMERY WHEELS.

Burglars recently made a successful raid upon the office of the Keewatin Lumber Company at Portage la Prairie, Man., breaking open the safe and securing $86 in cash.

Probably the largest stick of oak timber ever cut in the North American continent was manufactured by Messrs. Fowler & Kelsey, of Wallaceburg, Ont., the present season. It is white oak, fifty-one feet eleven inches in length and squaring forty-one by forty inches, making nearly six hundred cubic feet.

WHO'S WHO IN THE HOO-HOO?

Another grand concatenation of the Lumbermen's Hoo-Hoo order was held in Toronto on July 7th. The biographical degree of the Great Black Cat was given precisely at nine minutes past nine in the ninth storey of the Temple Building. Nine expert cats assisted by nine playful kittens escorted the chosen few through the mysteries of the onion bed.

Lumbermen mistake if they imagine this order is simply one of fun. It is a very serious order and one destined to be a great factor in the lumbering interests because of its secrecy and fraternal power in business.

The concatenation was a grand success. The frenzied wailing of the purblind kittens and the frantic waving of the tail of the Great Sacred Black Cat caused more emotional feelthan the Queen City ever saw or heard of. The high fences of the gardens were worse than the lung-tester even when the full moon shone brightly.

The most High "muck-a-mucks," in the shape of trained Buffalo black cats, were again on hand. Vice-gerent Snark Hubbard made the arrangements and they were complete.

The officers who conferred the degrees were as follows :—

Snark - - - - Harlan P. Hubbard
Senior Hoo-Hoo - A. R. Riches
Junior Hoo-Hoo - H. "Slabslaster" Munro
Bojum - - - Wm. J. Hetherington
Scrivenoter - - - W. C. Laidlaw
Jabberwock - - - Orson E. Yeager
Custocation - - J. "Rip-saw" Feist
Arcanoper - - Geo. W. Nickels
Gurdon - - - - Richard "Pad" Locke

Those invited were :—

Wm. Jno. Shortreed
Samuel R. Higgins
Gil. S. Lay
C. Max Beck, Jr.
J. Reg. Hooper
Colin C. Wallace

After the beautiful instruments made sweet music "the cats came back" and enjoyed the following luxurious repast given in the supper room :—

MENU.

B. T. T. O. T. G. S. B. C.

Soup
Oriental Fleas

"O, that a man might know the end of this day's business ere it come."—*Julius Caeser V. I.*

Dry Cornmeal
(ad. lib)
Fish
Cat o'nine tail

"Confess yourself to heaven; Repent what's past, avoid what is to come."—*Hamlet III. 4.*

Beef
(cross cut)

Rolls (From the Gang Edger) Ham (bored) — Pommes de Terre (a l'Arsuppus) (grooved) Tongue

Salad
"Picked in the Gardens East and West,"
Dessert
"Lungtester" Dressing

Cigars (From the Onion Bed) — Coffee (saw-dust) — Liquid Joy (As you like it)

Addresses were given by Messrs. O. E. Yeager, J. Feist, W. C. Laidlaw, H. P. Hubbard, J. R. Hooper, W. J. MacBeth and others. The following telegram was read from J. M. Diver, of the Cleveland-Sarnia Saw Mills Co., Sarnia Ont.: "Regret my inability to be present. Hold Lay up close and let him get all the fragrance of the Onion Bed. See that Higgins is elevated in proper shape. Make him bow his head to the instrument of torture."

Also the following from Jas. Playfair, Midland: "Yours of 5th received, but as there is one "Kitten" in the family now, think I had better stay out, for, as it is at present, have all I can look after and if two kittens in the family would have to close up. Wishing the new members all success." Regrets were received from other candidates unable to be present.

It was the expression of the members present that Toronto should have another Cancatenation before September 9th, and the date of August 28th was suggested, so as to insure a good attendance of Canadian members at the Yearly Meeting at Buffalo, Sept. 9th.

"God Save the King" was sung standing, and "On the Roof" closed with "Auld Lang Syne."

HOO-HOO ANNUAL AT BUFFALO.

There will be something doing in the Concatenated Order of Hoo-Hoo on the ninth day of September, when the twelfth concatenation will open in Buffalo.

That nine times as much pleasure and profit shall result from the coming concatenation as former conventions of the order have afforded, elaborate preparations have been made by the local committee having in charge the arrangements. July 28 the general committee met in the Builders' Exchange, and though the programme of entertainment is not yet complete, it is far enough along to justify the prediction that this Buffalo Concatenation will eclipse anything held in former years.

The following is a list of the committees that will have the affair in charge :

Ways and Means—John Feist, chairman; Curt M. Treat, C. H. Stanton, A. J. Chestnut, I. N. Stewart, O. E. Yeager, Walter Betts, D. H. Harper, A. J. Elias.

Entertainment—J. B. Wall, chairman; C.H. Stanton, M. S. Tremaine, F. W. Vetter, F. B. Emery, Curt M. Treat, E. B. Holmes, Frank Reilley, Fred Blumenstein.

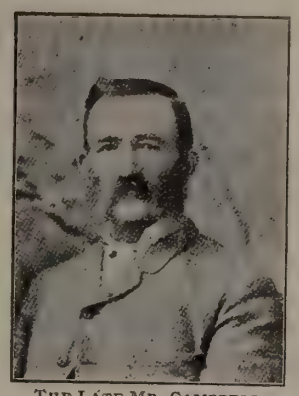
Ladies—Angus McLean, chairman; John W. Henrich, Henry M. Feist.

Reception—J. J. Mossman, chairman; M. M. Wall, Henry E. Boller, A. J. Miller, Arthur Kreinheder, Fred Sullivan, J. M. Briggs, C.R. Shuttleworth, C. H. Seymour.

—It is reported that Richard Keay & Company, who have purchased the Hanbury timber limit in Duck Mountains, Manitoba, will build a saw mill with a daily capacity of 30,000 feet.

—McFadden & Malloy, lumbermen, who are operating back of Garden River, found difficulty in securing men to work in the woods. Accordingly they went to the jail at Sault Ste. Marie, Ont., and secured the liberty of six prisoners by paying the fines that had been imposed upon them as an alternative when being sent to jail. The fines were paid, of course, upon the condition that the men would go to work in the camps.

THE LATE MR. P. C. CAMPBELL.



THE LATE MR. CAMPBELL.

A faithful officer of the Crown and a prominent and esteemed citizen of Sault Ste. Marie, Ont., has passed to the great majority, in the person of Mr. P. C. Campbell, Crown Timber Agent for Algoma district. Mr. Campbell, accompanied by his wife, came to Toronto on August 8th, and the following night was stricken with paralysis. He was removed from the Rossin House to the general hospital where he received every care which kind friends and medical aid could provide. He never regained consciousness, however, and passed away on the 14th ultimo.

Mr. Campbell was born in Aldborough, county of Elgin, on December 2nd, 1833, his parents being among the pioneer settlers of that township, having emigrated from Argyleshire in 1818. He, with the rest of the family, experienced and went through all the vicissitudes and hardships incidental to a pioneer life at that time, when the only roads were blazed paths and there were no mills, no churches, no schools. His education was such as could be obtained at home, with occasionally a few weeks at a school which his father and two neighbors maintained at their own expense. Higher education was out of the question, as it could not be obtained nearer than Little York, and neither the time nor the money could be spared for that purpose. Though largely self-educated, he filled many positions of trust and importance in the community in which he lived.

From 1853 to 1860 Mr. Campbell's time was divided between farming and lumbering. From 1860 to 1868 he was engaged in lumbering in conjunction with Mr. George Campbell, of Windsor. From 1868 to 1872 inclusive he was employed as overseer of colonization road building in Muskoka and Parry Sound, being for the last three years acting inspector, and during the winters of these years engaged in wood ranging. Resigning his employment under the Crown Lands Department in 1872, he again engaged in lumbering, meeting with heavy disaster in 1873, in common with all engaged in the lumbering business that year. In 1876 he opened a conveyancing, loan and insurance office in Wardsville, in the county of Middlesex, combining with it next year the purchase and shipping of all kinds of produce, and from 1878 to 1881 he also managed a private bank in the same village for Fawcett & Livingstone, of Mitchell, Ont. Towards the close of the latter year he went to Winnipeg, along with many others, and was one of the victims of the collapse of the boom of 1881 and 1882.

Mr. Campbell was always a pronounced Liberal, and took an active part in political life. He was elected Reeve of his native township in 1867 by a large majority. He was at the front with the volunteers as ensign of the Wardsville Infantry Company in 1865-6, being stationed at Sarnia during the Fenian Raid. In 1883 he was offered the position of Crown Timber Agent for the district of Algoma, which he accepted and occupied up to the time of his death. He was an enthusiastic Highland Scotsman and an ardent Freemason.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance.. $ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., are CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which the inserted in a conspicuous position on front page of the Weekly Edition.

ASSESSMENT OF LUMBER.

By some persons the basis upon which lumber may be assessed does not seem to be clearly understood. There is prevalent an idea that it is an injustice to assess all the lumber on land at the time the valuation is taken, inasmuch as the quantity may include almost the entire season's cut, the bulk or all of which may be shipped out within a comparatively short time.

It is doubtless within the rights of the assessor to tax all lumber in stock. Even if the lumber should be sold at time of assessment it is still assessable, for there must have been received for it the equivalent in cash or other asset which would be equally liable to assessment under the heading of personal property. If, however, there is any indebtedness against the lumber the amount of that indebtedness must be deducted from the valuation thereof.

Assessments are made upon personal property, representing the assets less liabilities. If, for instance, the assets of a particular company were twenty thousand dollars, and the liabilities fifteen thousand dollars, the amount upon which taxes would have to be paid would be only five thousand dollars. This regardless of the quantity of lumber on land.

According to the Assessment Act "Personal property shall include all goods, chattels, interest on mortgages, dividends on shares or stocks of banks and other incorporated companies, money, notes, accounts and debts at their actual value, income, and all other property except land and real estate." The person to be assessed is requested and can be compelled to furnish a statement of assets. If when received it is not satisfactory, an appeal is taken to the Court of Revision, where both sides are given an opportunity of verifying their claims. On several occasions lumbermen have succeeded, through the Court of Revision, in obtaining a reduction of their lumber assessment, especially where it has been shown that the amount carried at time of fixing the valuation was exceptionally large. More can be accomplished in this direction by diplomacy than by antagonizing the Assessment Department, particularly in view of the admitted right to assess all lumber on hand.

BAD DEBTS IN THE LUMBER TRADE.

It would be interesting to learn what percentage of earnings is set aside by the lumber trade each year as representing uncollectable debts. Though of late there have been few business failures, it is safe to say that the losses still approximate a considerable sum, as legitimate failures are not the most destructful agencies to be contended with. The suggestion, recently made to the publishers of this journal, that a "Black List" of lumber buyers be compiled, is significant.

There are a large number of responsible lumber dealers in Canada—men who have earned the confidence of the trade, and even though their resources in some cases may not be large, the manufacturer assumes little risk of loss in selling his lumber to them. Unfortunately, there are always to be found a few persons presuming to call themselves lumber buyers who possess neither money nor honesty, but who seek to profit by sharp practice. The character of the lumber business renders it susceptible to the unscrupulous acts of these so-called dealers, and during the past few years they have not decreased in number. It seems that no sooner has one of these polished individuals been brought to account and his plans thwarted than another appeared to take his place. Hence it is difficult to rid the trade of their existence. It is against this class of buyers that the lumber manufacturer would welcome some protection. Honest, energetic business men will sometimes become financially involved, but the person who is willing and anxious to meet his obligations is a source of small loss as compared to the trickster whose main object is to deceive.

The large manufacturer suffers very little through bad debts. His trade is concentrated and he is dealing usually with large firms whose standing is at all times readily obtainable. The manufacturer who ships in carload and broken lots is more liable to accept accounts of questionable character. He frequently has not the facilities for investigating promptly the financial responsibility of the prospective customer, and is also more disposed to overlook this necessary duty.

How to minimize the loss attributable to bad debts is a question that cannot readily be answered. Probably the formation of an association of the lumbermen of Canada would do much in that direction. Many mill men might also exercise greater discrimination in accepting orders from buyers. There are so many well known dealers in the country that there is little excuse for selling lumber to a person who cannot promptly give assurances of his responsibility. Mill men should not hesitate to request the buyer of whose standing he knows nothing to satisfy him that settlement for the material will be made in due course.

EDITORIAL NOTES.

Apropos of our remarks in last issue, congratulations are due to the newly-formed Government of British Columbia upon the stand taken on the timber question. The refusal to abrogate the law prohibiting the export of timber in the log will surely be found in the long run to have been in the best interests of the country. The province of Ontario stands as a notable example of the advantage of home manufacture.

It is gratifying to learn that more determined steps are being taken to punish persons guilty of stealing logs, a crime which is altogther too prevalent. It is strange that persons whose characters are above reproach in other respects, will confiscate timber as if it were of no value. On the other hand, the fact that the owner's marks are often defaced indicates a recognition of the gravity of the act. It is hoped that the punishment for the offence will be more severe in future.

The result of the sale of timber limits to be held by the Ontario Government in December next will be of more than usual significance. It will be the largest sale since 1885 and the fourth largest since Confederation. In the neighborhood of 900 square miles will be offered. The prices which buyers are willing to pay for these limits will in some degree reflect public opinion as to the value of pine timber as an investment as well as for lumber-producing purposes. During the past few years of prosperity in the lumber trade, many lumbermen have increased their holdings of timber limits. Will they continue to add to their holdings is the question which will be determined in part by the sale of December 9th. The licensees are to be allowed only ten years in which to cut the timber on some of the berths, while the ground rent has been increased to $5 per square mile and stumpage dues to $2 per thousand feet board measure. These increases mean additional revenue for the Government, at the expense of the lumbermen.

The buying power of Canadian lumbermen is steadily on the increase. The sawmilling and woodworking establishments have doubled in number within a comparatively few years. Statistics of the aggregate value of machinery and lumbering appliances purchased each year are not obtainable, but if they were the showing would doubtless create surprise by reason of its magnitude. Settlements which a few years ago were almost unknown can now boast of thriving manufacturing industries, the existence of which is due in a large measure to the growth and development of the lumber industry. A considerable quantity of imported machinery is also purchased each year, and our advertising pages bear witness to the extent to which the manufacturers across the border

are looking to Canada for trade. Several firms have established Canadian branches, and keep one or more representatives on the road here. Such manufacturers have usually met with success. In order to obtain business it is first necessary to gain the confidence of the prospective buyer, and the creation of a branch factory or show-room within the territory to be exploited is a long step in that direction. Backed by up-to-date goods, success is then assured.

BY-LAWS OF THE WESTERN RETAIL LUMBERMEN'S ASSOCIATION.

Below will be found the full text of the by-laws of the Western Retail Lumbermen's Association as approved at the last meeting in Winnipeg. These by-laws form the basis of the action that has been taken against the Association on the ground of trade restriction :

QUORUM.

1. Four members shall be a quorum of the Board of Directors, and three of the Executive Committee.

MEETINGS.

2. The Secretary-Treasurer may at any time call a meeting of the Board of Directors or of the Executive Committee, and fix the place of such meeting. Notice of the meeting of the Board of Directors or Executive Committee must be mailed to each person entitled to attend the same at least one week prior to the date fixed for holding the same.

HONORARY MEMBERS.

3. Honorary members shall not be eligible for office, but shall have the right of speaking and voting at all meetings of the Association.

SPECIAL MEETINGS.

4. The President may at any time call a special meeting of the Association, notice of which shall be mailed to each member ten days prior to the date fixed for holding the same.

LIST OF MEMBERS.

5. The Secretary-Treasurer shall, every three months, in case changes have taken place, send to each member a list of the members of the Association in good standing, both active and honorary.

PRICE LISTS.

6. Whereas it is deemed expedient and proper that all members of this Association make a price list for the point for which membership has been granted and that all lumber and timber usually sold in a retail lumber yard be charged for at not more than twenty per cent. over wholesale cost.

WHERE LUMBER MAY BE SOLD.

7. An active member may ship in carload lots or less quantity, lumber, timber or other material, to points other than that for which such dealer has membership providing the sale is made at the price governing at the point where shipment may be sent to, except that lumber, timber or other material usually sold in retail yards may not be sent on consignment for sale by him, or stored for sale at any other point than that for which membership has been obtained.

CONTRACTING NOT ALLOWED.

8. Whereas it is considered advisable to avoid any undue advantage as between active dealers, no member of this Association may be a contractor for doing work, or become security for the due completion of work contracted for, except as provided in the next section, and that specified detailed prices be given to all consumers or contractors asking for tenders.

THE EXCEPTION.

9. The Executive Committee or Board of Directors, at such points where there is only one active member established, may allow such member to enter into contracts, provided that no interference with the business relations of other members is likely to arise therefrom.

WHEN HONORARY MEMBERS MAY SELL.

10. Honarary members may sell lumber, timber or other material for building elevators, flouring mills, mining companies for their own use, the several governments of the Provinces and the Dominion in any work they may control, and to railway companies for their own use, on any terms or conditions they desire.

SELLING WHERE MILLS ARE SITUATED.

11. Honorary members operating mills in a city, town or village, may sell to contractors or consumers at the locality where the mill is situated, at the retail prices fixed for such locality.

INVESTIGATION OF COMPLAINTS.

12. All complaints as to violation of the Constitution and By-Laws of this Association, by active or honorary members, may be reported to the Secretary-Treasurer, who shall investigate the same and report to the Executive Committee or Board of Directors.

HOW COMPLAINTS MADE.

13. All complaints as to violation of the Constitution or By-Laws shall be made in writing, by an active or honorary member, to the Secretary-Treasurer, accompanied by a deposit of $5, which shall belong to the general funds of the Association if the complaint is not substantiated. If such complaint is sustained, then said sum of $5 shall be returned to the complainant.

INVESTIGATION AND EXPULSION.

14. In case any member refuses to observe the decision of the Secretary-Treasurer upon investigation of complaints or violations of the By-Laws within two weeks after being served with a written intimation thereof, the matter shall be brought by the Secretary-Treasurer before the Executive Committee or Board of Directors' who shall investigate the complaint and may reaffirm or vary or set aside the decision of the Secretary-Treasurer. In case the decision of the Secretary-Treasurer is affirmed, the offending member may be expelled forthwith. In case the decision of the Secretary-Treasurer being varied and the offending member neglects or declines to comply with the rulings made by the Executive Committee or Board of Directors within two weeks thereafter upon written notice by registered mail of the same, then such offending member may be expelled from the membership of this Association.

POWERS OF SUSPENSION.

15. The Board of Directors or the Executive Committee may suspend or expel any member, active or honorary, for violation of the Constitution or By-Laws.

SUSPENSION BY SECRETARY-TREASURER.

16. The Secretary-Treasurer may suspend a member pending the decision of the Executive Committee or Board of Directors.

MAJORITY VOTE REQUIRED.

17. At all meetings of the Association the majority of the members present shall be necessary to a decision.

CESSATION OF MEMBERSHIP.

18. Whenever any active member of the Association shall cease to comply with Article 3, Sec. 1, of the Constitution, the Executive Committee or Board of Directors may, by resolution, declare him to be no longer a member of the Association, and his membership shall thereupon cease.

WITHDRAWAL.

19. Memberships shall not be transferable, but any member may withdraw from the Association.

APPLICATIONS FOR MEMBERSHIP.

20. Applications for membership shall be made to and decided by the Secretary and upon a form furnished by him. Applicants must also send the fees with the application.

FEES.

21. Membership fees for active members shall be $25 for the first year or portion of a year, and $7.50 per annum thereafter for each yard carried on by a member. Fees for honorary members shall be $10 for the first year or fraction of a year, and $7.50 per annum thereafter. The first fee shall be payable with the application, and the annual fees thereafter on the 15th day of January in advance. No member shall be entitled to vote at the annual or special meeting unless all fees are paid.

21 (a.) That any party opening a new yard shall be required to pay to this Association the prescribed fees and dues, but that in cases where one member in full standing buys out a lumber yard from another member in good standing no membership fee be charged, and only the annual dues shall be payable for such yard so transferred. This clause shall apply only to members transferring their business from one point to another.

HOW FEES APPLIED.

22. The fees shall be paid into the general fund of the Association, and all expenses properly incurred shall be paid out of said fund.

REINSTATEMENT.

23. Any member who has been suspended or expelled may be reinstated upon such terms as the Executive Committee or Board of Directors may determine.

PURCHASES BY ACTIVE MEMBERS.

24. Active members shall make their purchases of lumber, timber and other material from honorary members only.

REPORTS TO SECRETARY.

25. Any member of this Association having knowledge of a sale by an honorary member or his agents to a non-member may notify the Secretary of this Association in writing, giving full information in reference thereto as practicable, such as date or dates of shipment and arrival, car number and initials, original point of shipment, names of consignor and consignee, the purpose for which the material was or is to be used, and such other particulars as may be obtainable.

Such notice, if filed at all, must be sent, with or without information in detail, within thirty days after receipt of shipment at point of destination, and no notice shall be filed of any such sale or shipment occurring within fifteen days after date of membership, said membership to date from the first notice of the membership succeeding the acceptance of his application.

Upon receipt of such written notice the Secretary shall immediately verify such report so far as practicable and under the direction of the Board of Directors shall notify the members of the Association of such sale or shipment by such honorary member.

NOTIFICATION OF SUSPENSION.

26. It shall be the duty of the Secretary-Treasurer to forthwith notify all interested members by mail of all suspensions, expulsions, reinstatements, and new applications accepted.

WHOLESALE COST.

27. The wholesale cost of lumber, timber or other material shall mean the wholesale cost delivered at the point in question, including freight and other charges.

28. All By-Laws heretofore in force are hereby repealed.

29. These By-Laws to come into force on and after passing them.

NATIONAL HARDWOOD LUMBER ASSOCIATION.

The Secretary of the National Hardwood Lumber Association, in a recent communication, says regarding the progress of the society : As you know, at the last annual meeting the Association was nearly $4,500 in debt. Within three months we have reduced that indebtedness to $1,800 and have at this time about $1,200 cash on hand, so that we now only lack $600 of being out of debt. The members have paid up cheerfully and promptly and we have added twenty-two new members to our list. The work of the Inspection Bureau is growing enormously and in every department the Association is making remarkable progress. Considering the objects and work of this Association, it should have many more members than it now has and we have reached a point where our work is a demonstrated success and where we can offer inducements to new members. This Association should have at least 1,000 members and it is the intention to make an earnest attempt to increase our membership. There has been such a demand for our "Year Book" that the Board of Managers have instructed me to issue a very large edition, sufficient to cover this country and Europe thoroughly. Under this advice it is my intention to issue an edition of 20,000 copies October 1st, and all the new members that we get in previous to that time will have their names published in this edition, which publication alone will be worth more than the cost of a year's dues.

VIEWS AND INTERVIEWS

The forests of India are all Goverment property, and for the past 38 years the greatest care has been exercised to preserve what is considered a most valuable asset. Reforesting is carried on most extensively, and a very large staff is employed to look after these forests. Recently Mr. R. C. Milward of the Indian Imperial Forest Service was getting pointers on forestry, and had long interviews in Toronto with Mr. Southworth and others. Mr. Milward has been granted one year's leave of absence for inquiries into the protection of forestry, and has already visited Japan, the United States and part of Canada. He will visit Germany, Russia, Norway and Sweden before returning to report. Mr. Milward has his headquarters at Derhrahdun, where the Indian School of Forestry is located. He has charge of a district about 260 miles square, and has 60 natives under him, but in the dry season, when danger from fires is greatest, he has 100 additional men. They are paid from $2 to $4 per month. They can live on a few cents weekly. The Government fixes the minimum price for all classes of timber, and then calls for tenders for, or sells by auction such trees as are marked for sale.

* * *

An experienced agriculturist writing to a Winnipeg paper urges that the Dominion government extend its forestry operations in Manitoba to take in a strip of light sandy soil, about ten miles wide and thirty long, along the Assiniboine river east of Brandon. He then continues to write of the changes he has noticed in Manitoba timber limits as follows: The last thirty years have changed our timbered limits very much in Manitoba. To the east of the Red river, by cutting wood, ties and timber and then allowing fires to burn up small trees that would in thirty-five years be another forest we have driven the forest line back for miles. Again the forest line on the south side of the Riding mountains has gradually receded from ten to twenty miles until a new line of railway is projected through a settled district, whereas the Manitoba & Northwestern railway when constructed actually skirted the timber belt from Minnedosa to Newdale, Strathclair, Shoal Lake, Birtle on to Russell. It is well known that the fine timber belts along the shores of Pelican lake, Rock lake and the Pembina river have almost disappeared. The Turtle mountains, which at one time, thirty years ago, were covered with timber down to the edge of the prairie, present to-day a strange change to one who has not been that way for a quarter of a century. The forest line has receded from one to six miles and farm houses are dotted all along the edge of the mountain, in many places apparently half way up the mountain. These encroachments on our timber belts have given us land for cultivation, but we have a surplus of prairie land in Manitoba and the territories for cultivation and we are short of forests. Timber reserves are now set apart on the Turtle mountains, as well as on the Riding mountains, and there is to be no more homesteading done. This is right, but as so many acres have been cut down the more reason there is for trying to reclaim our open sandy plains above referred to.

THE SPRUCE SUPPLY.

Hon. E. E. Ring, of Bangor, State Commissioner of Forestry, does not consider that there is any danger of an early extinction of spruce and other pulp woods at the present rate of cutting, giving it as his opinion that there is enough spruce timber in North America to last forever if properly cared for and intelligently cut. He says:

Right here in Maine there are thousands of square miles of virgin spruce forests and if they are properly cared for, and destructive fires kept out, the supply is practically inexhaustible. When I was a very young man people used to stand around, just as they do to-day, and tell, with wise shakes of the head, that the spruce would be all gone in ten or twenty years. To-day we are cutting more spruce in Maine than ever before and there is a great plenty left. But, not stopping there, visit the sorting gaps along the Penobscot and the Kennebec rivers and you will find that the logs are just as big as they were a dozen years ago. The standard remains the same.

To be sure, a large amount of small spruce is cut in these times, but it is cut for the pulp mills, which can use smaller timber than the saw mills require. Conditions have changed in the harvesting of the log crop. No longer are the land owners willing to have trees cut so as to leave a stump anywhere from four to six feet high. They insist that all trees shall be cut close to the ground. This results in a closer cutting of lots than formerly. Again, the tops of the trees are not left in the woods, as was the case before the day of the pulp mill, but are trimmed and driven down to the pulp mills to be made into paper. How many stop to think what this means? Very few. But it means this: That the amount of timber scaled in the cutting of a certain number of trees to-day is much greater than it was twenty years ago, and we get a far greater yield of timber per acre than formerly.

People, or at least the majority, when they talk about the great increase in the amount of timber cut in Maine do not stop to think that the gain is due in no small way to the discontinuance of the wasteful practices of other days. Yet that is the truth of the matter. To-day the saw is taking the place of the ax and by its use a great saving is effected. Only a man who has owned timber lands and operated upon them can realize what it means to save a foot or two on each tree felled.

In discussing the spruce supply it should be kept in mind that this tree grows much more rapidly than any other timber except, possibly, the pine. Under ordinary conditions a spruce will grow in twenty-five years from a seedling to a good pulpwood size, and five years more will put it in the saw log class. This, with the proper care of the forest, means that, as I have already said, the spruce forests of Maine are practically inexhaustible.

But in order properly to care for these vast timber tracts, so as to preserve them for the future, it is necessary that the State and all interested shall keep a watchful eye upon them. This means that an efficient corps of fire wardens must be maintained for the protection of these lands. These men must be trained in the work of preventing and extinguishing fires; they must be constantly on the watch for the first incipient blaze, in order that it shall be stamped out before making any headway. The land owners must do their part, too. They must see to it that the timber is properly cut and not wasted. They will do this—it is for their interest to do so.

THIS IS THE WAY WE SAVE MONEY FOR LUMBERMEN. THERE ARE OTHERS—WRITE US

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 32 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. IX. TORONTO, CANADA, SEPTEMBER 2, 1903 No. 31

CANADA LUMBERMAN

PUBLISHED BY

The C. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING MONTREAL.
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—TO RENT A PORTABLE SAW Mill; state charges per thousand feet. Apply Drawer 12 Hamilton.

WANTED—BASSWOOD AND HARDWOOD barrel heading, 5/4 and 8/4 beech, 2" and thicker soft maple and wormy chestnut. R. E. KINSMAN, Hamilton.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

MAPLE LUMBER WANTED

I AM OPEN TO PURCHASE LARGE OR small quantities of Hard Maple Lumber, sawn 1, 1¼, 1½, 2, 3 and 4 inch. Grade to be common and better. Terms cash when shipped. Mixed carloads taken. Millmen will please state the quantity they have of each thickness, with their lowest price. Also say how long sawn. Address care BOX 22 CANADA LUMBERMAN.

FOR SALE.

One 20" x 24" Waterous engine, 8 ft. driving wheel, 26" face. 11 ft. x 4 ft. Stillwell & Bierce Heater, feed pipe and connections to heater complete.
One 10" x 18" Engine.
One 3-k.w. 2,500 Standard Dynamo and Voltmeter, wiring and 50 lamps (complete.)
One pair twin engines, 10x16.
One No.2 Carriage and Saw Frame, 78 ft. track, and two 60" Saws.
One set Trimmers, to trim 6 to 24 ft., chains, mandrils and saws.
Also a quantity of Shafting, 2" to 4" pulley, and steam and water pipe.
One 14' x 60" Boiler; one top saw slash table.
About one mile of telephone wire, and two 'phones. For particulars, apply to BOOTH & GORDON, Azilda, Ont.

FOR SALE

TWO CARS 1", 1¼", 1½", AND 2" DRY PINE No 2 cuts and better. SOO LUMBER COMPANY, Sault Ste. Marie, Ont.

FOR SALE

TEN CAR LOADS OF DRY INCH PINE mill culls, different widths and lengths. Apply to MAITLAND, RIXON & COMPANY, Owen Sound, Ont.

Logs For Sale

5,000 GOOD LOGS, MOSTLY WHITE PINE 16 feet long, now running into the mouth of Spanish River at Georgian Bay. Also Limit for sale with or without saw mill. Limit and saw mill located on C. P. R. main line. PINE LUMBER COMPANY, Cartier Ont.

PINE LIMIT FOR SALE

13½ MILES ON PIGEON RIVER, THUNDER Bay. Limit lies on river bank 50 miles from Fort William. A splendid location for good saw mill. Dray haul will water bulk of timber. Owner quitting lumber business. Limit will be sold at a bargain. Box 790 CANADA LUMBERMAN, Toronto.

FOR SALE

LATH FOR SALE, ABOUT 150 M. KNIGHT Bros. Company, Burks Falls, Ont.

WANTED TO RENT, A SAW MILL IN A place where quantities of Hardwood, Hemlock or Pine logs can be bought. Address Box 130, Hanover, Ont.

FOR SALE

CEDAR AND TAMARACK; 200,000 ties and 20,000 telephone poles on the Vermillion River or drove to Spanish boom. JAMES MCCREARY, Larchwood, Ont.

FOR SALE—ONE 48" Hercules Water Wheel in good order, a bargain for immediate sale. Address, MACHINERY EXCHANGE, 22-24 Victoria Square, Montreal, Que.

FOR SALE

FACTORY FLOORING

KILN DRIED BIRCH, ABOUT 60 M. Box 442 CANADA LUMBERMAN.

WANTED

50,000 FEET 2" MILL RUN BROWN ASH and 100,000 to 500,000 feet Box Spruce. HURDMAN & ELMITT, Ottawa.

FOR SALE

ONE OF THE BEST PAYING AND MOST complete lumbering concerns in British Columbia, including limits, mill and plant, capacity five million per year, on which a net profit of over $20,000 per annum is being cleared. For particulars apply to X. Y. Z, care CANADA LUMBERMAN.

FOR SALE.

240 acres Timber Land, 4½ miles from Durham, Ont., with good saw, shingle and lath mills complete; also good dwelling house and stables. Railroad switch can be put in property. Land well timbered with Hemlock, Maple, Birch and Cedar. Will either sell outright or one-third interest to practical man who will manage business at reasonable salary. Apply to COCKBURN, WHALEY & CO., Guelph, Ont.

PATENT FOR SALE

BAND SAW CLAPBOARD MACHINE, THE only one in the world. Carriage has automatic setting device, only 8" stroke, with turntable. Block stands vertical and cuts all clapboards radially. Will take blocks any diameter 14" to 32 x 48" long. All clapboards cut desired thickness regardless diameter block. Will cut five times faster than any circular machine, 25 per cent. saved in saw kerf. A sound block 48" long x 3" diameter will cut out $10 worth of clapboards. Large demand in New England States. Price $45 per M pieces. Will sell entire right for Dominion. Drawings and specifications on application. A. J. BURTON, Parry Sound, Ont.

The saw mill at Carleton, N. B., owned by J. A. Gregory, of St. John, was destroyed by fire last week, together with about $1,000 worth of lumber belonging to Mr. Driscoll.

CURRENT TRADE CONDITIONS.

ONTARIO.

The lumber business is fully up to normal in volume and the outlook for the future is satisfactory. There is evidence of buying in anticipation of fall and winter requirements, some dealers being disposed to place their orders earlier than usual in order to forestall the car famine which develops every fall. The lower grades of white pine are moderately active, but there is less call for the intermediate and higher grades. Manufacturers still report numerous inquiries for box lumber. The advisability of making an advance in the price of box grades has been discussed, but the general disposition seems to be to pursue a policy of conservatism and encourage consumption by keeping prices at a reasonable basis. A slight improvement in Norway lumber is reported from the Ottawa district. There continues to be a heavy trade in hemlock at unchanged quotations, the attempt to advance certain sizes having been frustrated by offerings by the smaller mills. The hardwood market is characterized by a short supply in relation to the demand. Very few mills are carrying more than a moderate stock, while some of the largest manufacturers are almost completely sold out.

Prices of white pine lath are tending towards weakness. The demand is not as large as might be expected at this season of the year, while the supply in certain districts is comparatively large.

QUEBEC AND NEW BRUNSWICK.

The lumber trade of the Eastern Provinces continues in a healthy condition. There have been no recent sales of square or waney timber, consequently the list is unchanged. Large shipments of spruce lumber are being made to the New York market, where prices are about one dollar per thousand higher than at last writing. The demand is fully equal to the supply, with some sizes exceptionally scarce. Laths are more active and slightly higher. New Brunswick cedar shingles are still uncertain. Fancy brands bring $3.50, but the bulk of sales are probably being made at $3.40 for Boston delivery. Clears range from $2.85 to $3, and seconds from $2.25 to $2.40.

The lumbermen are sending men into the woods for the winter's operations. Wages are about the same as last year, $26 to $30 being paid for good men.

MANITOBA AND BRITISH COLUMBIA.

The movement of lumber throughout the North-West continues large. Prices generally are firm, although some dealers are said to be making a slight cut in one or two grades. There is no abatement of

the building activity in Winnipeg and a large quantity of lumber is being consumed. The situation is respect to British Columbia shingles is unchanged, the mills being closed down. On the other hand, the saw mills are working full time and are behind with orders. This is largely the result of active local building operations. A recent trial in the courts to decide the legality of loggers holding logs for wages has resulted in a victory for the loggers.

UNITED STATES.

Dealers in pine lumber were much interested in the meeting of the Mississippi Valley Lumbermen's Association held last week, for two reasons, first, that changes in the price list would be considered, and, secondly, on account of the statistics that would be presented. The Price List Committee made only unimportant changes. Dimension over 18 feet was advanced 50 cents, and piece stuff of 10-foot length was made the same price as 12, 14 and 16 foot; 6-inch No. 3 fencing, E siding and lath were reduced 50 cents, and D siding $1. The list, it may be said, remains unchanged, as the advances in some lines were offset by reductions in others. The report of the secretary showed the pine market to be in a strong position statistically, with a pronounced scarcity of box grades. Lumbermen are inclined to the opinion that all the lumber manufactured will find a market at prices now ruling.

In the East conditions continue to brighten. Box lumber and mill culls are as scarce as ever. A Buffalo dealer says that the price of 12-inch box pine is now established at $20. There is not a large call for the higher grades and occasionally a slight cut in price is reported. There is no oversupply of hemlock, which continues in active demand. Piece stuff is taken as fast as it is ready for the market. Among the hardwoods birch and basswood are in short supply; dealers are meeting with some success in selling other kinds of lumber as a substitute for basswood. A slight advance has been made in the price of maple. In New York City the hardwood market is active and firm, with the better grades of both plain and quartered oak finding ready sale at high prices.

GREAT BRITAIN.

The British lumber market does not yet show any decided tendency. It is feared that unless the consumption shall improve lower prices will rule for Baltic lumber, of which the quantity on hand in the leading centres is somewhat large. A few cargoes of pitch pine lumber have lately been received at London on consignment, which is not regarded as a favorable sign. These circumstances have affected Canadian stocks to some extent, but on the whole they are relatively firm. Good pine stocks are in a strong position, and with an increase in consumption higher prices could easily be obtained, especially for first and second qualities. There is a further slight improvement in spruce deals. Shipments from the St. Lawrence have been below the average this year and promise to be small for the balance of the season. A cargo is said to have been recently placed at London at £9 15s for 3×9 seconds and £9 for thirds. Prices of square and waney pine timber are very high, causing a curtailment in the consumption for certain purposes. At London the stock of elm timber is low, but prices realized at recent auction sales do not indicate that the market is particularly firm. There has been an improvement in flooring boards, the supply of which is light.

London dealers are making considerable shipments to South Africa. There is a fair demand there for building lumber, the price of deals ranging from 6d to 8d per foot run.

STOCKS AND PRICES.

Cedar 18-inch shingles are held in Chicago at $2.60 and $3.60, and 16-inch at $2 and $2.45.

Cleveland dealers report a great scarcity of Norway lumber and the winter will find yard assortments badly broken.

The steamer Forest Holme took on deals at Montreal for London, completing her cargo at Riviere de Loup, whence she will sail this week.

The steamer Bray Head sailed from Quebec on Saturday last with a full cargo of deals for Plymouth and Davonport, for the Imperial Government.

Lath in the cargo and carload trade at Chicago is moving moderately at $3.45 to $3.50 for white pine and Norway and $2.50 for hemlock and No. 2 pine mixed.

The Pigeon River Lumber Company, of Port Arthur, Ont., have three logging camps and one road camp in operation on their limits, and more will be started as soon as men can be secured.

Raworth Bros. have cut 1,200,000 feet of lumber at Hampton, N. B., for Flewelling Manufacturing Company. The mill has been removed to Bonny River to saw 2,000,000 feet for John E. Moore.

The receipts of lumber at the Tonawandas for the week ending August 22 were about 10,000,000 feet, bringing the total for the month to that date up to 50,000,000 ft. There is considerable lumber on its way down the lake.

The Temiskaming and Northern Ontario Railway Commission are asking for tenders up to September 25th for the delivery of 135,000 ties along the right of way between the 72nd and the 112th mile of the Temiskaming and Northern Ontario Railway. Tenders are to be addressed to P. E. Ryan, Manning Arcade, Toronto.

A sale of No. 4 boards was recently made at Duluth, Minn., at $12, which is the top of the market so far. No. 1 and No. 2 strips are claimed to have been sold at about $2 better than the ordinary price. The demand is far better for lower grades of pine than for higher qualities.

The attention of our readers, and especially dealers in shingles, is directed to the advertisement in this issue of Woods & Spicer, Limited, of Vancouver, B. C. They are anxious to hear from dealers either in the United States or Canada who handle 20 or 24 inch shingles, and no doubt they have something good to offer.

The Georgian Bay lumber firms are making preparations for work in the woods. The Victoria Harbor Lumber Company will employ about 600 men if they can be obtained. They will have three camps on the Wahnapitae river, two on the Sturgeon river and one on the French river. The total cut will probably exceed 20,000,000 feet. Pitts & Charlton will operate on the Whitefish river and expect to cut between 15,000,000 and 20,000,000 feet.

The New Brunswick Government will offer the following timber berths for sale at the Crown Lands Office, Fredericton, on Wednesday, September 9th: Two square miles on West Branch, No. 18 Brook, Little River, A. Cushing, applicant; two square miles on Green river, below Emerson Farm, R. A. Estey, applicant; two miles on Nevers Brook, branch of Caanan river, Thomas Campbell, applicant; two miles on North East Branch Pickett's Cove, C. H. Mott, applicant.

Though there is a report of light buying of various hardwood lumber in the eastern markets, it is all laid to the midsummer season, and there are already indications of a return to the former demand. All hardwoods, says the Buffalo correspondent of the American Lumberman, are doing well, unless it be white ash, which has given way to substitutes. The need of oak is so great that all grades are eagerly taken. There is a larger sale of basswood than formerly, though the price is strong at $40 for inch. Maple is running up in price and will soon be one of the expensive woods. It brings $22.50 in Michigan and reports come in that the Michigan Maple Company is turning down all orders, having sold so far ahead. Certain dealers report the receipt of chestnut and birch, but there is no regular supply of either to be had. They go out about as soon as the consumer learns of their existence.

The new list compiled by the Mississippi Valley Lumbermen's Association fixes the following prices for common boards f.o.b. Minneapolis, taking effect August 25, 1903: No. 1, 13 inch and wider—12, 14 and 16 ft. $23; 18 and 20 ft. $24. No. 1, 12 in.—10 ft. $24.50; 12, 14 and 16 ft. $23.50; 18 and 20 ft. $25.50. No. 1, 10 in.—10 ft. $21.50; 12 ft. $20.50; 14 and 16 ft. $19.50; 18 and 20 ft. $22.50. No. 1, 8 in.—10 ft. $17.50; 12 and 14 ft. $19.50; 16 ft. $20; 18 and 20 ft. $19.50. No. 2, 13 in. and wider—12, 14 and 16 ft. $19. No. 2, 12 in.—10 ft. $20.50; 12 and 14 ft. $20; 16 ft. $19; 18 and 20 ft. $22.50. No. 2, 10 in.—10 and 12 ft. $18; 14 and 16 ft. $17; 18 and 20 ft. $19.50. No. 2, 8 in.—10 ft. $15.50; 12, 14 and 16 ft. $17; 18 ft. $16.50; 20 ft. $16.50. No. 3, 12 in.—10 and 12 ft. $17.50; 14 and 16 ft. $16.50; 18 and 20 ft. $18. No. 3, 10 in.—10, 12, 14 and 16 ft. $15; 18 and 20 ft. $18.50. No. 3, 8 in.—10 ft. $14; 12, 14, 16, 18 and 20 ft. $15. No. 3, 4 in. and wider—10 ft. $13.50; 12, 14, 16, 18 and 20 ft. $14.50. Lath prices were fixed as follows: No. 1 white pine, $3.50; No. 2, $2.50; mixed $3.

BUSINESS NOTES.

W. H. Higgins, of Vancouver, who has for several years conducted the largest individual logging business in British Columbia, has been compelled to make an assignment for the benefit of his creditors. The cause of the failure is officially stated to be the present stringency of the timber market, Mr. Higgins having now on hand between five and six million feet of logs which are unsaleable, but which at ordinary prices would realize more than sufficient to pay the liabilities. The liabilities are estimated at something like $20,000. The plant for logging at Toba Inlet is said to be worth $25,000. It is said that Mr. Higgins recently offered 3,000,000 feet of logs at $4.50 per thousand, which is claimed to be less than cost price, whereas two months ago he could have obtained from $7 to $8 for the same logs.

BROOM HANDLES.

If an enterprising man with supplies of cheap Spruce, Basswood or Poplar cares to put in several machines to work broom handles we can take his output. Write in first instance to Empire, care of CANADA LUMBERMAN.

WHITE PINE STATISTICS.

The report of the white pine production in the territory covered by the Mississippi and Wisconsin Valley Lumbermen's Associations states that estimates of the probable production indicate that on the whole there will be a slight increase in this year's cut. The mills have so far this season sawed about 20 per cent. less piece stuff than last year. There has been a steady decrease in the percentage of piece stuff on hand during the past four years. There is less shop lumber being produced this year than last, as less No. 3 shop is being put in pile. No. 4 boards which were in plentiful stock at the beginning of the season are reported well cleaned up. This is particularly true in the Wisconsin valley.

An increase in the amount of lath on hand August 1st is reported, being in the neighborhood of 7 per cent. over that of August 1st of last year.

Statistics showed that the lumber manufacturers of the Mississippi and Wisconsin Valleys held on August 1, 1900, 11 per cent. less lumber than they had on August 1, 1899.

On August 1, 1901, they had 7 per cent. less stock on hand than on August 1, 1902, making a total shortage of last year over 1899, of 25 per cent.

We find, after as careful an investigation as we can make, that the stock on hand August 1 this year, is slightly in excess of that on hand last year, or about 3.2 per cent. This shows that stocks are still far from normal.

On January 1st the combined inventories showed a decrease of 1.3 per cent. over the stocks on hand January 1, 1902, or a total of 1,484,127,575 feet.

Shipments for the first seven months of the year by the members of both associations amounted to 1,235,133,863 ft., which is 1.4 per cent. greater than the total reported by the same firms for 1902. The consumption in the Northwest and shipments to Chicago and the East count for the increase.

The steam saw mill owned by William McNutt at Tay Creek, York County, N. B., was burned on August 24th, also 30,000 feet of lumber and 45,000 shingles.

LUMBER PRICES IN LONDON.

Prices realized at the last auction sale held by Churchill & Sim, London, England, were as follows:

PINE—Ex. Hampstead, from Montreal—9-13 ft. 3x12-22 in. first quality, £26 per std; 12-13 ft. 3x11, £28 10s; 9-16 ft. 3x11, £28 5s; 9-14 ft. 3x7-10, £20 10s; 6-8 ft. 3x6-21, £19 15s; 9-16 ft. 3x12-22, £23 10s; 9-13 ft. 3x12-22, £23 10s; 6-8 ft. 3x12-19, £18; 12-16 ft. 3x11, £24 15s; 9-11 ft. 3x11, £19 10s; 6-8 ft. 3x11, £18 10s; 9-16 ft. 3x6-10, £15; 9-16 ft. 3x6-10, £14; 6-8 ft. 3x6-10, £15 10s; 9-16 ft. 3x10 in. third quality, £12; 9-16 ft. 3x9, £11 10s; 9-16 ft. 3x8, £11 10s; 9-16 ft. 3x7, £10.

FIRES.

The shingle mill of Phillips Bros. at Flesherton, Ont., with a quantity of shingle stock, was burned a few days ago.

On August 28th fire broke out in the lumber yard of the Sheppard & Morse Lumber Company at Ottawa, but it was extinguished before much damage was done. About 100,000 laths were destroyed.

TIMBER LIMIT TRANSACTIONS.

It is reported that the Rat Portage Lumber Company, of Port Arthur, Ont., have recently purchased a large area of standing timber in Minnesota.

The saw-mill and timber limits of S. C. Smith, of Enderby, B. C., have been purchased by J. A. Taylor, of Arrowhead. The limits are located on Sugar Lake.

Prouty & Miller, of Newport, Vt., last week purchased from the Eastman Lumber Company, of Eastman, Que., 34,000 acres of timber lands on the eastern side of Mount Orford and in Bolton township, Quebec. The price paid was in the vicinity of $25,000.

The large demand for birch is a feature of the hardwood trade. This lumber is now used very largely for the manufacture of furniture.

NOTES.

Haines & Company, of Buffalo, have received 3,600,000 laths within the past ten days.

It is reported that Pacific coast red cedar shingles have been advanced 5 cents per thousand.

Hemlock is selling in Chicago at $12.50 to $14. Norway pine piece stuff is held at $16.50 for short and $18 for long.

His Honor Judge Bole, in County Court at Vancouver, B. C., decided that the men who claimed liens for wages against the booms taken out of the woods for G. H. Finlay & Company had valid claims. Finlay & Company were logging on the Squamish, and had a boom of 1,000,000 feet at the mouth of the river, another about twenty-five miles up from the river mouth, and also had timber in the woods near the camp. The firm assigned, and the loggers filed liens for their wages under the Woodman's Lien for Wages Act.

THE BOSTON MARKET.

There is a quiet market at Boston for spruce lumber, but the supply is light, owing to the better prices in the New York market attracting the output of some of the leading Maine mills. Quotations are unchanged: Ten and 12 in. dimensions, $21; 9 in. and under, $19; 10 and 12 in. random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7 and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9 in. and under, 10 feet and up, $18 to $18.50; 5 in. and up, merchantable boards, $17; matched boards, $18 50 to $20; out spruce boards, $13 to $14; bundle furring, $17.

Hemlock is quiet and easy: Boards, 12, 14 and 16 feet stock, $14.50 for good eastern; Pennsylvania, No. 1, $18.50 to $19.50; No. 2, $15 to $16.50.

Western pine lumber is quiet but very firm: Uppers, 1 to 2 in. $84 to $87; 2½ to 3 in. $92 to $97; 4-in. $96 to $100; selects, 1-in. $76; 1¼ to 1¾ in. $76 to $78; 2-in. $78; 2 1-2 to 3 in. $84; 4-in. $86; fine common, 1-in. $67; 1¼ to 1½ in. $69; 2-in. $72; 2½ to 3 in. $80; 4-in. $82; barn boards, $23 to $33; coffin boards, $28 to $32.

Hardwoods are easier. Plain oak is quoted lower, but quartered oak is firm. Whitewood is also easier: Quartered oak, $75 to $83; plain oak, $42 to $45; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $51 to $53; sap, $43 to $48; common, $38 to $45; brown ash, $41 to $44; white ash, $43 to $46; maple, $33 to $37; end dried white maple, $46; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; northern elm, $29 to $31.

Clapboards are steady and unchanged: Extra, $45; clear, $43; second clear, $40; extra No. 1, $30.

Shingles are steady: Extra cedar, $3.35 to $3.50; clear, $2.90 to $3.00; second clear, $2.25 to $2.40; extra No. 1, $1.50 to $1.75; British Columbia red cedar, 16-in. five butts to 2-in., $3.45 to $3.50; 18-in. five butts to 2 in., $3.75; five butts to 2¼ in., $3.90 to $4.

Laths are firmer: One and five-eight in., $3.15 to $3.25; 1½-in., $3.10 to $3.15.

FIRST AMERICAN BAND MILL IN CHINA.

W. E. Whitney, mechanical expert, of the J. A. Fay & Egan Company, the well-known woodworking machinery manufacturers of Cincinnati, Ohio, has just returned from a trip to China, where he has been for a year operating some of their machines for the Foo Chow Saw Mill Company, Foo Chow, China. One of these mills was the first which has ever run in China, and has met with great success. There are two band mills. Mr. Whitney reports that the Chinese are much more clever people than he expected them to be in the way of handling machinery. One of his most singular experiences while in China was that in attracting the attention of the men he employed it was necessary for him to use numbers, on account of the difficulty of pronouncing the Chinese names. He also states that in the city of Foo Chow there are only about 700 Europeans, the balance of the 350,000 population being entirely Chinese.

Up and Down.—"I saw a board to-day in which the grain ran both ways."

"Nonsense! That's impossible."

"Not in this case. I refer to the Board of Trade."

TRADE NOTES.

Incorporation has been granted to John Ballantyne & Company, Limited, Preston, Ont., to carry on the business of manufacturing wood and iron working machinery. The capital is $80,000.

The business of the Winnipeg Machinery & Supply Company has been purchased by the A. R. Williams Machinery Company, of Toronto, by whom it will be conducted as a branch establishment. Mr. W. H. Young is in charge.

The A. H. Andrews Company, manufacturer of dry kilns, Chicago, have opened a branch office at 334 Lumber Exchange Building, Seattle, Wash., in charge of Mr. H. Johnson, who will look after their dry kiln sales on the Pacific Coast.

Mill managers and power transmission engineers should visit the exhibit of the Dodge Mfg. Company at the Toronto Exposition, where a representative line of power transmission equipment, which this company makes, will be shown. Recently the company received an order from abroad for about 5,000 of their Standard wood split pulleys in sizes from 5 inches to 5 feet. It required 5 large box cars to transport this order to the seacoast for shipment across the water. This order is not spoken of merely for its size but to show the favor with which Dodge wood split pulleys are held abroad.

We notice that a drug firm in Collingwood is making a bid for the trade in liniments, colic medicines, nitre and condition powders for horses, and all the necessary medicines for the men in the lumber camps. We refer to Mr. A. H. Johnson, wholesale druggist. Mr. Johnson has for years been catering to the lumber trade, and has succeeded in marketing a number of preparations which we learn are filling a long felt want in the camps. The horses of a logging outfit cost a a large amount of money, and an investment of a few dollars in several well-tried remedies is, we think, a judicious one when stocking the camps and vans, and one that very few lumbermen fail to make. Attention is drawn to Mr. Johnson's advertisement on page

The daily newspapers again have a lumber trust under way. The Bulletin of San Francisco says: E. H. Harriman and James J. Hill are uniting in a great timber deal whereby they with a number of associates will control the lumber market of the world. They are securing large tracts of forest land in Northern California and Oregon through their agents who have been for some time quietly buying property on the coast. Among the associates of the two railroad magnates are Frederick Weyerhaeuser of Minneapolis, T. B. Walker of Minneapolis, Jacob Blodgett of Grand Rapids, and a number of other men of influence in the various timber sections of the western states.

A VISIT TO THE WORLD'S FAIR AT ST. LOUIS.

[By Our Travelling Representative.]

After going through Wiscosin I made a rapid journey through Beloit to Peoria and Galesburg, Illinois. From the latter place I went direct south to St. Louis, striking the Mississippi river at Alton.

Crossing the famous Eads bridge I saw the waters of the great Mississipi and Missouri rivers rolling their mighty flood onward to the Mexican gulf.

St. Louis is wide-awake at any ordinary time, but it was more especially so when I saw it. Thousands of workmen were there helping to put up hundreds of building destined for the great Exposition.

Hall of International Congress, St. Louis World's Fair.

The formal dedication of the grounds took place on the 30th of April. The exposition will open on the 30th of April next. The approximate cost will be over forty millions of dollars, it will be built upon a 1200 acre site. To grasp St. Louis one must know that it is spread out over an area exceeding by far that of New York city, an area of 62½ square miles, twenty miles of river frontage, 8000 factories, a population of over 600,000, with twenty-five railroads.

Speaking to one of the officials I asked if it would be larger than the Chicago World's Fair, and his reply was :—"This exposition will surpass all former expositions in the largest total fair ground area ever included, the biggest exhibit area ever held under one roof, and the largest sum of money ever available for an exposition."

The courts, avenues, terraces, artificial lakes and falls, etc., will surpass anything ever known. The big Atlantic liner "St. Louis" will be reproduced in wood, full size. A two-acre map of the United States will be shown with every state and town marked, and Jerusalem is to be reproduced intact with its famous wall.

Provision has been made for a splendid building in which to display the appliances and processes used in lumbering and the relations of lumber to the industry and progress of the world. This building will be known as the forestry building, and will be 600 feet long by 400 feet broad. It will include illustrations and models of lumbering operations, transportation, storing, drying and manufacturing.

One of the principal exhibits will be on forest destruction by fires, by sheep-grazing, by destructive lumbering and by natural causes, such as storms, diseases and enemies.

The regeneration of forests by natural seeding and by forest cultivation will be shown. Under the various groups will be shown all the lumbering appliances, including saw mills, logging roads, dry kilns, storage yards, etc.

When I arrived at St. Louis the fair grounds presented an animated scene. Many of the larger buildings were already completed and ready for occupancy, whilst the rattle of hammers and machinery on all sides betokened the great enterprise being rapidly pushed forward.

Canada is expected to put forth her best efforts and as the eyes of all lumbermen are turning to our northern forests it is expected that her exhibit will be a representative one.

"Canada will take part in the Louisiana Purchase Exposition as a Nation." Such was the answer given by Sir Wilfred Laurier from his seat in the House of Commons, to an inquiry made by one of the members of Parliament.

From all I could learn, the lumbering and forestry departments will be well represented by Canada's exhibits. Talking to one of our Canadian officials on the exhibit to be made, he said :

"Lumbering ranks third among the extensive industries of Canada and the forest wealth is very great. It is stated that 123 species of trees grow in that country, 94 occuring east of the Rocky Mountains, and 29 on the Pacific coast. The forest belt extends a distance of about 4,000 miles east and west, with a breadth of some 700 miles. The trees consist principally of the following species :—black and white spruce, banksian pine, white pine, red pine, larch, balsam fir, balsam poplar, aspen, canoe birch, bird cherry, white cedar. Black ash and mountain ash occur sparingly in the southern part of this belt.

"British Columbia is thought to possess the greatest compact reserve of timber in the world. The wooded area is estimated at 285,000 square miles and includes many kinds of timber. The Douglas spruce is the show tree of British Columbia and indeed of Canada.

"The forests of Canada contain pine, spruce, hemlock, oak, elm, maple, beech, birch, butternut, hickory, bass wood, etc. Nearly 38 per cent. of its whole area is forested.

"In 1899 the capital invested in the pulp mills of Canada alone was about $15,000,000. The capacity of the mills was over 1200 tons per day. The value of the forest products exported in 1901 was nearly $33,000,000, and their total must have been at least three times that amount."

By this it will be seen that Canada will have something to show. The Canadian Commissioner, Mr. Wm. Hutchison, is now actively engaged in making preparations for a thoroughly representative exhibit of the timber and lumbering industry. British Columbia is to furnish a forest monster in the shape of the largest and longest piece of Douglas fir ever shown.

On making a tour of the World's Fair site I was struck by the remarkable number of carpenters and wood-workers actively engaged. It was an interesting sight to watch the hundreds of skilled workmen using the latest approved appliances putting up modern buildings with a rapidity that was in itself startling.

One of the World's Fair Buildings at St. Louis in Which Lumber Plays an Important Part.

Running through the grounds are many railway lines with an intra-mural electric service. The city and its surroundings looked very fine to me. Down on the levee were thousands of colored workmen, and innumerable stern-wheelers, like great floating palaces. Other parts of the city, with there French names and places, reminded me of our own historic Quebec.

J.R.H.

NEW CANADIAN EMIGRATION OFFICES.

The remarkable growth of emigration from Great Britain to Canada has necessitated the erection by the Dominion Government of large new offices in London, England. These new offices, which were opened in April, are located at Charing Cross, in the centre of the Metropolis. They comprise a very imposing block of buildings of commanding appearance, and should provide adequate accommodation for the purpose for which they have been erected for many years to come.

New Canadian Emigration Offices, London, England.

The accompanying illustration shows a portion of the interior of the ground floor. It is partitioned off for various departments. The office of Mr. T. R. Preston, the Canadian Commissioner of Emigration, is on the ground floor. All the fittings are of Canadian wood, comprising bird's-eye maple, cherry, ash, and oak, the fittings having been mainly supplied by the Office Specialty Company, of Toronto, and the Canadian Office and School Furniture Company, of Preston. All the offices are admirably arranged to meet the work of this department, which now comprises quite a considerable staff.

BURNT TIMBER.

Arrangements are being made by several of the firms whose limits were swept by the fires that raged last spring in Quebec, New Brunswick and Nova Scotia to send men in early to cut the damaged timber. Prompt action must be taken if the timber is to be saved from the ravages of the small white worm that preys on exposed wood in the Canadian limits. This parasite seemingly cannot get in its fine work when the tree is protected by its verdure, but once the trunk is charred or scarred in the slightest degree, it finds an opening. Cases have been known where the worm has attacked and worked on shanties which have been standing for a season or more. In other cases charred trees have escaped for a couple of seasons, while those on a nearby limit have, in a few months, been rendered unfit for the chopper's attention.

LUMBERMEN'S AXES.

One of the largest manufacturers of axes and edge tools for the use of the lumber trade is the James Smart Manufacturing Company, Limited, of Brockville, Ont. This well known company not only make axes, but a general line of metal goods.

In order to make the above it requires one of the largest plants in the country, and this the Smart Company have. Their special line, however, is lumbermen's axes, wood-splitting mauls, cedar wedges, hanging wedges, chopping axes, joiner's and framing axes, tomahawks, lathing and shingle hatchets, etc.

These axes and wedges are manufactured from solid cast steel, polished bits and in a great variety of patterns, as used in the different sections of our Dominion.

Lumbermen and camp supply jobbers should send for illustrated catalogue of this firm's products. A visit to the works of this company at Brockville shows an immense staff employed in the developing of a great industry.

R. McDonald has sold his lumber business at Ronald, Man., to the Canada Lumber Company.

PARRSBORO, N.S.

LUMBERING IN THE EAST.

Almost each section of country develops its own peculiar features of lumbering, and the operators in one district take an interest in the conditins and methods which prevail in another. The American Lumberman gives a splendid account of lumbering operations in Maine, which are very similar to those in New Brunswick and Nova Scotia. Of logs and logging it is said that the differences in methods begin in the woods. Maine is, of course, the great lumber producer of New England. It is a state so well supplied with water courses that the logging railroad has seldom been employed, and the river driver still remains in control of log transportation. The western visitor to Maine mills is struck by the long and miscellaneous length logs that he will see in the woods and being put through the mill. The Maine logger does not bother much with a saw in the woods. The axe fells the tree, cuts off the top and trims it up, and then the stick goes undissected to the boom. Whatever length of log the tree will make is usually the way in which it reaches the mill.

It has been earnestly argued by some that trees should be sawed and not chopped down, as by that means a good deal of timber would be saved; but on the other hand most of the Maine logging streams are more or less rugged, and square butted logs would be more likely to be damaged by the rocks than those which are roughly shaped with the axe. An operator on Kennebec waters says that if he sawed down the tree he should probably roughly point them with an axe before putting them in the water. He gets a few million feet of logs each year out of a stream which has a fall of 1,200 feet in five miles. It is no greased slide, either, but is lined and bottomed with rock, which batters up the logs pretty badly.

There is one reform in felling, however, which meets with approval, and that is to cut the trees as close to the ground as possible. The average chopper likes to swing his axe at a convenient height, with the result that one to three feet of the best part of each tree are left in the woods. Forest Commissioner Ring is an earnest advocate of economy in this matter.

LENGTHS OF LOGS AND LUMBER.

When the logs reach the mill there is some cross-cutting done. Pine is usually cut to even lengths, somewhat in conformity with western customs, but spruce, if not cut for special bills, is sawed full length and trimmed to the nearest foot. It seems to be preferred in this shape by the majority of buyers, and a yard full of this stock presents a rough appearance, no matter how much care is used in piling. An exception is to be noted in the deal trade. Deals are cut to standard lengths, widths and thicknesses.

A curious thing—which prevails to a considerable extent in all New England—is the use of untrimmed and unedged lumber in pine. There are a good many small mills cutting second growth pine, or old growth when it can be found, which cut their logs up live, or practically so; or may flatten one side, if they use a circular saw, and then cut the log right up. This rough looking stock is bought by the factories, which find that it suits their purpose just as well as though it were edged and trimmed.

NEW ENGLAND MILLS.

The result of sawing long logs and other peculiarities of the business of course have their effect on mill equipment. There are some fine saw mills in New England, but there is probably not one that at first glance would meet the entire approval of a man familiar only with methods in such states, for instance, as Wisconsin or Arkansas. For example, there are comparatively few shotgun feeds in use. There are some mill men who have adopted them and swear by them, but most of them of the better class use the twin-engine feed as better adapted to the long logs they have to handle. The spruce logs are usually cut full length, unless upwards of 40 feet long, when they may be cut in two; but so many logs run between 30 and 40 feet in length that the twin-engine steam feed is perhaps the most satisfactory tool for general use. In fact, any double mill would be equipped to cut 50 or 60 feet on one side.

Just beyond the decks and between the mills, whether band, circular or gang, is located a jump-up saw, which cuts a log as indicated by the orders in hand. The jacker chain ends at the top of the slide and there are live rolls between decks, fixed with a back-up arrangement so that after the logs are carried ahead to crosscut they can be run back to the deck. This same crosscutting saw also cuts bolts for the clapboard machine. Cutting lumber as they do, the Maine mills are seldom equipped with a gang trimmer. As the boards are trimmed full length, and any length that they will make, the old fashioned railroad or jump saw is used.

There are a few mills that still cling to the old live gang. Some of the Lumberman's readers may not know what a live gang is. It is simply a gang through which round logs are put. Most of them used in the eastern mills have no oscillation, but simply move in a straight line up and down, while the logs are dogged in place and fed by a ratchet and pinion device that feeds them forward when the sash is descending. The rate of feed varies from ¼ to 2 inches for each stroke. There are those who claim that this old-fashioned mill is still the best for cutting deals for the English market. The saw marks are straight across the board, the sawing is even and they claim that the back movement of the gang cleans away the cut so as to avoid the splintering at the bottom that is sometimes seen in the product of the modern gang.

While there are a good many relics of primitive saw mill days in Maine, New Hampshire and Vermont and even in New York, most of the larger mills are equipped with bands and probably turn out the finest manufactured lumber that is put on the market. They pay attention to the quality of manufacture, and are not so anxious for quantity as the mill men of the south and west. Yet a mill man said the other day that the English trade does not care for smoothly sawed deals; that if the surface were a little rough it seemed to improve the grade, but that it was important that they should be band or gang and not circular sawed.

CLAPBOARDS AND CLAPBOARD MAKING.

A feature of all the larger New England mills is the manufacture of clapboards. Now a clapboard may look like bevelled siding, but it isn't; it is a product which New England builders insist is in every way superior to the bevelled siding resawed from strips, and the easterners wonder why it is not introduced into all mills which manufacture siding.

The standard length for clapboards is four feet, though it could be changed to suit the requirements of any given market. The width is six inches. The method of manufacture is, briefly, as follows : Clean, sound logs are selected that are of about the right size. These are put in a rough lathe called a barker, which trims them down to the proper size with a knife which travels automatically back and forth. Then the bolt is put into the clapboard machine proper, being held in place by the chuck holes. The bolt is on a carriage which travels back and forth over a finely set circular saw. The bolt is turned a trifle at each stroke, so that each cut is made from the circumference toward the heart, leaving about three or four inches in diameter of the latter. The result is a pretectly rift sawed product bevelled to the right angle. These pieces are detached from the heart and run through planers which dress one side and the thick edge. Clapboards are made in four grades, the highest being absolutely clear, the next being sound and free of all defects except on about one inch of the thin edge ; while the lowest grade must be sound, with tigh tknots.

SOMETHING ABOUT SPOOLWOOD.

The spool wood business is a minor branch of the trade which has given employment to a number of mills and a value to white birch timber. Spool wood is white birch cut in pieces from ½-inch to 2 9-16 inches square, and 2½, 3 or 4 feet long. These pieces must be absolutely clear, with any defect cut out, while staining or twisting will ruin the stock.

The price alongside the vessel in Bangor used to be about $20; now it is about $27 a thousand feet, board measure, and both manufacturers and handlers say there is less money in the business at that price than there used to be at the lower figure. This is because stumpage is higher priced and the operators have to go further back for the timber. Most of this stock that is exported—and only about one-third of the Maine product is used at home — goes to Greenock, Scotland, and Hull, England. There are a half-dozen or so spool factories in the United States, but they get most of their stock from sections where the export business is not as well established as it is in Maine.

THE ITALIAN BOX SHOOK TRADE.

Another side issue of the Maine trade is the manufacture of shooks for the Italian orange and lemon growers. It is estimated that the annual export of this material from Maine is about 3,500,000 boxes, of which this year Rowland W. Stewart, of Bangor, will ship about 2,225,000 boxes. These shooks are made from beech, yellow birch and maple, and are produced by turning them from steamed bolts. The logs are cut into bolts of the required length, steamed about ten hours, peeled and

then cut by a heavy rotary vencering machine. The sheets of veneer are then cut into the shook sizes. For orange boxes the shook is 28 inches long, 10 inches wide and 1-6 inch thick. For lemons the sizes are the same except that the width is 11 inches. The shooks are put up 40 pieces, or ten boxes, in a bundle, and an ordinary cargo contains about 250,000 boxes. The box is made of four of these pieces with three thicker pieces at the ends and in the middle. The thick wood is mainly an Austrian product, though Mr. Stewart ships about 500,000 sets annually. One potent reason which induces the Italian shippers to buy boxes in this country is that the United States gives a rebate of 15 per cent. on re-importation. The hoops or straps that bind the boxes are produced from an Italian chestnut.

Speaking of the export trade, it is reported that the shipments of American pine and spruce to Germany are being seriously interfered with by a new product which comes from Hungary. About 200,000,000 feet were secured from that source last year, it is said, all of which has cut out just so much pine of Swedish, Canadian or American origin.

MEDICAL ATTENDANCE IN LUMBER CAMPS.

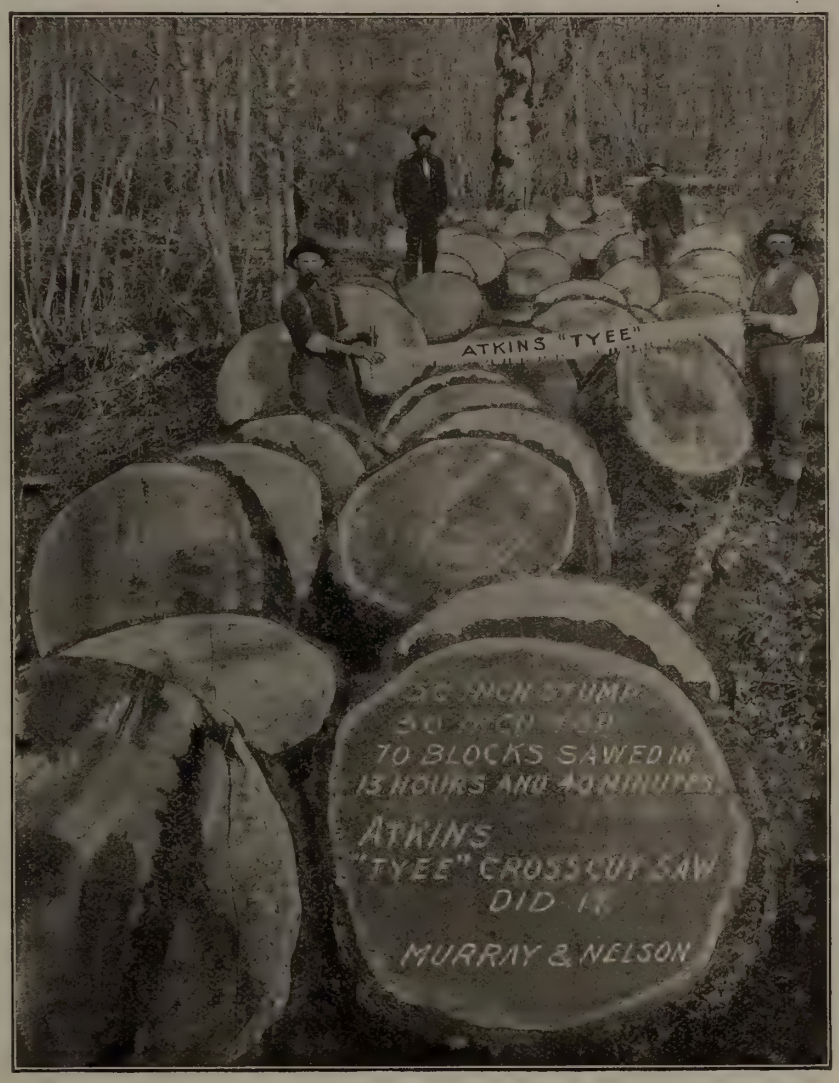
Dr. H. P. Bryce, Secretary of the Ontario Board of Health, is working energetically to improve the sanitary condition of lumber camps. He is sending a circular letter to all lumbermen in regard to the matter and calling attention to the new Order-in-Council concerning medical attendance in lumbering and mining camps in the unorganized portions of New Ontario. The Order-in-Council is as follows :

Regulation 12 of Regulations for the Sanitary Control of Unorganized Districts be amended by the following section, known as sub-Section " A ".

Employers of labor on all works in such districts shall transmit, at the time of the contract, to the secretary of the Provincial Board of Health, the name or names of the physician or physicians employed by them under the act, and of any subsequent change made in their physicians and of the contracts between the two contracting parties.

Should it appear to the Provincial Board of Health, owing to the distance of the residence of the physician employed from the camps of the company, that the best interests of the employees are not likely to be served, it shall be competent for the Provincial Board of Health with the approval of the Minister of the Department, to require any employer of labor in such districts to contract with some physician residing at or near the works of the company.

Should it further at any time appear, owing to the distance of the physician from the camps, or to neglect or other cause on the part of the company or of physician employed, that employees have been put to expense to secure medical assistance for sickness or accident other than of Company's physician, the employer and physician shall be held responsible for the payment of a reasonable fee for such medical services, the amout to be paid in such instances to be determined in case of dispute by the Minister of the Department, under Section III of the Act, Chapter 34 I Edward VII.



A GREAT ACHIEVEMENT.

The following letter in connection with the illustration herewith is a voluntary testimonial to the superiority of Atkins Saws.

LANGLEY PRAIRIE, B. C., May 3rd, 1903.

E. C. ATKINS & CO., Portland, Ore.

GENTLEMEN,—We have used one of your saws this spring and find that it does better work than any saw we have yet used. It is the "Hoo Hoo Tyee," Four cutters and the Raker. We have taken a picture of some of the work this saw has done and we are sending you one of them. We are ready to do this work again with the Tyee Saw. Have been the means of selling a good many of these saws and are ready to recommend them to anyone for use in large or small timber. The tree we cut was yellow fir, 50" on the stump inside the bark and 30" at the top, and we made 70 cuts in 13 hours and 40 minutes. Made about 20 cord of stove wood and have proof of same if asked for. This is the first of these Tyee saws to be used in these parts, but we can promise you that it will not be the only one in a short time.

Yours truly

(Signed,) WM. J. NELSON,
JOHN MURRAY.

WOOD PULP DEPARTMENT

PULP AND PAPER MANUFACTURE IN BRITISH COLUMBIA.

Mr. R. E. Gosnell, Secretary of the British Columbia Bureau of Information, is doing excellent work for the province by furnishing information calculated to develop its natural resources and increase its export trade. He has recently issued two important bulletins, entitled "The Timber Industry of British Columbia" and "The Markets on the Pacific for British Columbia Wood Pulp and Paper." The following extracts bearing upon the pulp and paper industry explain the situation :

No mills for the manufacture of wood pulp or paper are at present established in this province, but no portion of Canada can show greater advantages for these industries. Water-powers can be found on the coast of the mainland which afford unique facilities for industrial works, owing to their situation adjacent to deep water, to their ease of development, and to their being in the centre of the timber areas. In addition to the water-powers on the coast, there are numerous fine water-powers in the interior of British Columbia, where can also be found immense quantities of wood suitable for pulp ; but at the present time the rate of freight to the coast would be a bar to successful competition in the outside markets.

Along the coast-line of the mainland of British Columbia and Vancouver Island practically inexhaustible areas of pulp wood can be found. South of Knight's Inlet the most abundant wood is the Douglas fir, which is successfully used for the manufacture of chemical pulp. Its suitability for mechanical pulp is not so certain. North of Knight's Inlet is the spruce and hemlock belt, affording enormous supplies of excellent pulp-wood—the Sitka spruce especially being unexcelled by any other wood for pulp purposes. These woods cover large tracts immediately contiguous to the sea-coast, so that logs can be landed at the mills at very low cost.

An important point in favour of the industries on the sea-coast of British Columbia is the mildness of the winters, which admits of operations being carried on throughout the whole year. The forests of this province are much more densely wooded than those of Eastern Canada, 500 cords per acre being not uncommon, while from 100 to 150 cords may be taken as a fair average of good timber lands. With proper husbanding the forests are practically inexhaustible for pulp-wood purposes. This is essentially a timber country. Atmospheric conditions are especially favourable to tree growth, which is very rapid, and the extent of otherwise valueless country along the coast that can be devoted to forestry is enormous. Owing to its wealth of raw material, excellent water-powers and geographical position, British Columbia occupies a position of eminent advantage in competing for the pulp and paper trade of the Pacific.

An important factor bearing upon the future of British Columbia as the centre of the pulp and paper trade of the Pacific is the rapid depletion of the forests of the United States, and it is confidently anticipated that the importation of Canadian pulp and pulp-wood to that country, already large, will continue to rapidly increase. In conclusion, there is no industry, not even mining itself, which gives greater promi e of commercial value and general importance than that of the manufacture of wood pulp and paper in this province.

The Legislature of British Columbia has passed an Act which authorizes the Government to enter into agreements with pulp companies, granting them leases of pulp lands on very favourable terms, both as regards rental and royalties, and to reserve areas out of which selections of pulp lands may be made.

The pulp companies with whom agreements have been made are : The Industrial Power Company, the Pacific Coast Power Company, the Cassiar Power and Industrial Company, the Oriental Power Company, and the Quatsino Power and Pulp Company. All of these have large limits and water-powers reserved.

A special feature of British Columbia timber areas is their density, the yield being greatly in excess of that obtainable from equal areas in Eastern Canada. The average cut in Ontario is about 10 cords per acre, while upon the lands secured by these companies the estimated cut is over 100 cords per acre. This density enables logging to be carried on to great advantage, and it is estimated that the cost of wood at the mills for many years will be at least one-third the average cost to Eastern American mills. Cheap coal of excellent quality can be obtained from Nanaimo or Union, and shipments can be made directly by water to the mills.

The markets that can, with special facility, be supplied from British Columbia are : British Columbia, Japan, Australia, China, New Zealand, Hawaii, the Philipines, Western Coast of South America, Western Coast of Mexico, and Asiatic Russia.

The home market is a rapidly-growing one, and with the steady growth of population a correspondingly rapid increase of the requirements in the way of paper may reasonably be anticipated. The long distance from the Eastern mills and the freight rates make competition from the East impossible.

Japan probably furnishes the greatest possibilities for the future, the imports of paper in 1900 amounting to over $2,000,000, and that of pulp to about $230,000. Both the demand for pulp and paper in Japan is increasing very rapidly, and the pulp mills of this province will be in the best possible position to supply it.

The Australian market is perhaps the most important at the present time. There are no suitable pulping woods on that continent, and no water-powers, so that Australia is almost wholly dependent upon outside sources for its supply of paper.

If preferential trade duties were arranged between Canada and Australia, as may be possible in the future, Canada (and British Columbia in particular) will occupy a position of great advantage as compared with other countries competing for this trade. It is to be noted that a considerable portion of the paper imported into Australia from Great Britain and the United States was manufactured from pulp shipped from Eastern Canada. The freight charges (and customs duties, in the case of the United States) on this must materially increase the cost, and can be entirely avoided by manufacturing the paper in British Columbia.

Mr. Gosnell's views as to the possibilities of the pulp industry have evidently become modified, as his last contribution on the subject says :

It has been established beyond question that a very large market for paper, and incidentally for pulp manufactured in the province, does exist, sufficient to justify the erection of one or more paper mills.

There are, however, one or more important considerations to be kept in mind. The market for pulp alone, apart from a paper mill, is not large enough for a large pulp mill. Japan is practically the only consumer of that product, so far as we are concerned. The output of pulp must be largely consumed in the local paper mills, for the products of which there are very exclusive markets in Australia, South America and other countries bordering on the Pacific Ocean. There is, too, in British Columbia and the Northwest a home demand, which is rapidly extending—not sufficient, perhaps, to absorb the entire output of a paper mill, but nevertheless an important market in that connection.

There are also to be considered the questions of labour and shipping facilities. Labour on the Coast is higher than in the East ; but the other natural conditions are so favourable that careful estimates show that pulp can be manufactured several dollars a ton cheaper here than in Eastern Canada, on that account. The location of the timber reserves on the water's edge, with water carriage to the mills, is the explanation of that, and will compensate for increased cost of labour. Shipping facilities and competition in ocean vessels is more limited on the West than on the East Coast ; but the development of ocean traffic on the Pacific is so rapid that any present disadvantages on that score will soon be overcome.

Another consideration of moment must not be overlooked. The market while it exists must be cultivated, and pulp and paper manufacturers will come into competition in the foreign market, in certain lines, with British, Canadian, United States, German and other manufacturers (principally British). To meet these on equal grounds and obtain a share of the market will take time and enterprise. The advantages on the side of the British Columbian manufacturer will be cost of production and

geographical situation. With abundance of raw material and water power, there is no reason why the latter could not, in the lines he would naturally undertake to manufacture, such as news, wrapping paper and certain grades of cheaper stationery paper, undersell all competitors, or at least successfully hold his own.

PULP NOTES.

It is expected that the new pulp mill of J. R. Booth at the Chaudiere, Ottawa, will be in operation within a month.

The Fraser River Power & Pulp Company, Limited, has been incorporated by the British Columbia Government.

Price Bros. & Company have built a card-board mill at Joniquieres, Que., for using up the product of the pulp mills at that place.

James Murray, of Vancouver, has been examining spruce timber limits on the Sound for the purpose of reporting to the British Columbia Government as to the extent of pulp wood in that district.

The Laurentide Pulp Company, of Grand Mere, Que., has just declared a half-yearly dividend of 4 per cent. on the capital stock. It has been decided to increase the capital by $1,200,000 in order to permit of making certain improvements to the mills.

The Menzie Wall Paper Company has recently been formed by Toronto capitalists. The charter gives the company power to build and operate pulp and paper mills and to develop water powers.

The E. B. Eddy Company, of Hull, Que., have installed two new grinders in No. 2 pulp mill and have built a new flume. The company have not sufficient ground wood for the amount of paper they were making, hence the increase in equipment.

There is a prospect of the pulp mill at Chatham, N. B., again resuming operations. Recently R. A. Lawlor asked the council for a fixed assessment of $100,000 for ten years in the event of obtaining the necessary capital to again begin the manufacture of pulp.

The American Thread Company, of Willimantic, Conn., has begun the installation of a plant for the manufacture of pulp spools. This process has been in course of development for the past two years and many obstacles had to be overcome before the spool was perfected.

The Pacific Coast Power Company, Limited, has been granted incorporation by the British Columbia Government. The company have acquired large timber limits and rights on Powell river and propose to erect pulp and paper mills. It is agreed to spend $50,000 before January 10, 1904.

Capt. Edward Partington, of Manchester, England, has recently been on a visit to St. John, N. B., in connection with the business of the Cushing Pulp Company at that place. He said that pulp wood had increased 50 per cent. in price, but that the Cushing mill was paying and would be operated to its fullest capacity.

Advices from South America state that a new process for making paper from the leaves of the maize plant has been invented in Brazil. The specimens of paper produced, which were made with imperfect apparatus, are of excellent quality, though only of the rougher sorts of wrapping paper. Should the inventor's anticipations be realized it is clear that a new and important industry could be established in South America, where maize is extensively cultivated and the leaves are not utilized except to a small extent for feeding cattle. The inventor says that in the state of Bahia, to which he belongs, maize yields two crops per annum, and that three crops could be secured where irrigation is employed.

It is becoming more and more necessary, says Forestry and Irrigation, that a substitute shall be found for spruce in the paper-making industry, and it is probable that experiments will show many trees which can be profitably utilized, and thus serve the double purpose of keeping the industry alive and saving the spruce from total destruction. The possibilities of straw, corn stalks, and waste from sugar cane, have not yet been exhausted, and the prevention of waste has never had sufficient attention. Spruce has so far established itself as the pulp material par excellence, that most manufacturers will hear of no other. Nevertheless poplar, cottonwood, hemlock, and even pine are being used, and for the best paper a blend of other woods is used in connection with spruce. In spite of the present prejudice in favor of spruce pulp, there are signs which point toward the use of other pulps with no admixture of spruce at all.

THE JENCKES MACHINE COMPANY, SHERBROOKE, QUE., CANADA.

THE JENCKES MACHINE COMPANY, SHERBROOKE, QUE., CANADA.

THE NEWS

The Moose Mountain Hardware & Lumber Company has been incorporated at Alma, N. W. T.

—The bobbin factory at Parry Sound, Ont., formerly owned by Ker & Harcourt, is being offered for sale.

—The Fernie Manufacturing Company, of Fernie, B. C., have their new sash and door factory nearly completed.

—At Roberval, Que., Col. B. A. Scott has built a mill for barking pulp wood and has increased the output of his saw mill.

—It is the intention of Colin A. Chisholm, who is in the shingle business at Cedar Cove, B. C., to build a saw mill at an early date.

—William Stuart has been admitted as a partner in the business of Van Wart & Company, lumber dealers, Calgary, N. W. T.

—The Boyd, Caldwell Company, Limited, are building an addition to their mill at Lanark, Ont., to accommodate shingle machinery.

—It is understood that further extensive improvements are contemplated at Chemainus, B. C., by the Victoria Lumber & Manufacturing Company.

—The Kennedy & Davis Milling Company, of Lindsay, Ont., have just installed throughout their mill and yard a very complete fire protection system.

—The P. R. Cumming Manufacturing Company, manufacturers of wooden handles, skewers, etc., are considering the removal of their factory from Clarksburg to Renfrew, Ont.

—The Crowther Lumber Company has been formed at Cranbrook, B. C., to operate limits located on Perry and St. Mary's rivers. The mill will be built about eight miles from Cranbrook.

—The growth of the lumber industry in the Kootenay district of British Columbia has been remarkable during the past year. According to John J. Billings the shipments this year will reach 200,000,000 feet.

—Frank Sheppard and Frank O'Reilly, of Nanaimo, B. C., have gone out to select the tracts of timber land which will be taken by James Dunsmuir in accordance with his recent purchase. The limits are located on Vancouver Island.

—The saw mill of the Cook Bros. Lumber Company at Spragge, Ont., is turning out upwards of 150,000 feet of lumber per day, by means of double and single cutting band saws. The mill is under the superintendence of J. A. Ansley.

—Some of the heirs of the late William Richards, of Boiestown, N. B., feeling that he divided his property in a rather peculiar manner, are taking steps to have the will set aside on the ground that deceased was not wholly responsible when the will was made.

—The Harcourt Lumber Company, Limited, of Woodstock, Ont., has been incorporated, with a capital of $40,000, to manufacture and sell lumber, lath and shingles. The provisional directors are M. S. Schell and W. S. Snell, of East Oxford, and Frank Maundrell, of Woodstock.

—Moran Scalan and associates, who are operating a shingle mill at Erie, B. C., have decided to move their plant to Nelson, to which point the timber can be floated more cheaply. The site formerly held by the Fairview Lumber Company has been applied for.

—The Cleveland-Sarnia Saw Mills Company have entered into a five years' contract to furnish a supply of saw-dust to the Sarnia Gas & Electric Light Company to be used as fuel. Automatic carriers on an endless chain will convey the saw-dust to the power station.

—The Crothers Lumber Company, Limited, has applied to the New Brunswick government for incorporation, with power to engage in lumbering in New Brunswick and British Columbia. James Chapman, of Gagetown, and T. B. Crothers, of St. John, are interested.

—A despatch from Tokio states that Korea has granted the Russian Lumber Company a twenty years' lease of 350,000 acres of timber land at Wongampho, with the right to purchase all the timber floated down the Yalu by Korean subjects, thereby conferring a practical monoply of the timber in the Yalu valley.

—Application has been made to the New Brunswck Government for the incorporation of the Murray & Gregory Company, Limited, to acquire the mercantile and lumber manufacturing business heretofore carried on at St. John, N. B., under the name of Murray & Gregory. The capital stock is placed at $150,000.

—The Elk Lumber & Manufacturing Company has been organized at Fernie, B. C., the officers being : President, O. A. Robertson ; vice-president, J. C. Wood ; treasurer, W. P. Dutton ; manager, D. V. Mott. The company have acquired about 300,000,000 feet of standing timber and contemplate erecting a mill at Hosmer.

—W. E. Wilson, representative of Wilson & Company, of San Francisco, who has recently been buying timber limits on Vancouver Island, B. C., is making arrangements to have a railway built so as to bring the timber down to tide water. The road will be about four miles long. Mr. Wilson states that the timber which he has purchased will supply the mill at Fair Haven for the next fifty years.

—The Pigeon River Lumber Company, of Port Arthur, Ont., have been granted a charter for the construction of a railroad in Cook county, Minnesota, from near theinternational boundary to a point on Lake Superior, which will probably be Grand Marais. The company have for some years been getting out logs over the old Port Arthur, Duluth and Western Railway, which has practically been abandoned for years and is in such a state of repairs that it takes several locomotives to do the work of one on a good track and road-bed.

—Mrs. Louisa M. Gates, of Bay City, Mich., has begun suit against the Lake Superior Power Company, of Sault Ste. Marie, for $15,000 in her own right, as the holder of the Crown timber license berth 78, in the Township of Creighton, on the north shore of Lake Huron. She also claims $15,000 damages from the power company for having trespassed on the property and for their having cut and removed timber from it, and $786 which represent the Crown dues paid by her.

—Mr. Thomas Southworth, Chief of the Ontario Forestry and Colonization Department, returned last month from an extended tour of the Temiskaming district, where he found everything in a most satisfactory condition. Most of the settlers are from the older parts of Ontario, and he estimates the population of the district at from 8,000 to 10,000. From inquiries made he thinks the people realized about $175,000 on timber which they had ready for sale last spring. There are several sawmills going up, and the class of houses being erected is very good.

—The Hunting & Lea Lumber Company have just put into operation a new shingle mill on the south shore of False Creek, Vancouver, B. C. The equipment was installed by N. Thompson & Company, of that city. There is a 66-inch x 16 feet tubular boiler, with Dutch oven, a 14x20 inch horizontal engine, and 4 Letson & Burpee shingle machines. Conveyors and all modern labor-saving appliances are used, including electric light. The capacity of the plant is 100,000 shingles in ten hours, while provision has been made for an additional machine when required. The company intend to add a cedar mill in the near future.

—A dispatch from St. Paul, Minn., says : Peter Provonost, a Canadian lumberman, was arrested by William Grimshaw, deputy United States marshal, near Grand Marais, where, it is charged, he was engaged in despoiling government land of its timber. Information of his actions was furnished the United States authorities by fishermen. Provonost is charged with having established a regular logging camp and having cut timber to the value of $100,000 during the several months he has been operating. The timber cut was exported to Canada and only the choicest trees were taken. It is claimed that he cut the timber from territory covering many square miles. He was taken before the United States commissioner at Grand Marias, pleaded not guilty and was held under bond of $3,000 for the federal grand jury.

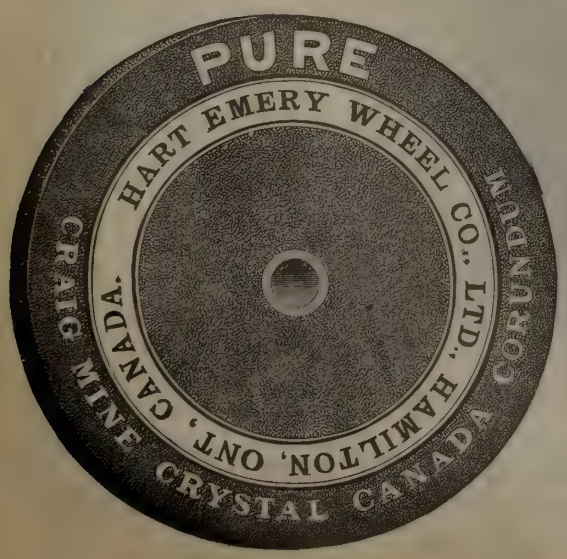
CASUALTIES.

—W. A. Goddard recently met his death at Caswell's Mills, near Stanstead, Que. He was endeavoring to throw off a belt in the shingle mill, when he was caught and whirled into the shafting.

—S. Stevens, foreman of McIntyre's logging camp on Howard Harbor, up the coast from Vancouver, B. C., was drowned by slipping off a log. Deceased was an experienced lumberman and a native of the Maritime Provinces.

—A terrific cyclone swept through the Ottawa district on August 7th. At Deschenes, seven miles from Ottawa, it struck the large saw mill being erected by Fraser & Company, blowing down three walls of the power house and killing two workmen named James E. Campbell and James Valiquette, citizens of Ottawa. The funerals of the victims was attended by many of the leading business men of the city, who desired to pay a last tribute of respect to the unfortunate ones.

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says :

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by Canadians for Canadians.

HART EMERY WHEEL COMPANY, Limited, Hamilton, Ont., Can.

WOODMENS LIEN ACT.

An important case under the Woodmen's Lien for Wages Act was argued before His Honor Judge Bole in the County Court at Vancouver, B.C., recently. It seems that some time ago the firm of Messrs. G. H. Finlay & Company established a logging camp up the Squamish river about twenty-five miles from its mouth. They had some twenty men employed and took out several booms. The men claim that their wages were in arrears. The Woodmen's Act gives the logger or timberman who has worked on the logs a lien for his wages for a certain time, and failing payment, the men appointed a representative to obtain counsel to protect themselves. As a consequence Messrs. Bowser & Wallbridge claimed a lien on behalf of Frank O'Toole, Charles Douglas, George Burns, C. V. Philpot, W. Miller, W. T. Miller, Charles Forn and Matt. Barreau, upon a raft containing 1,000,000 feet of fir and cedar logs lying in a boom near the mouth of the Squamish River, upon another of 500,000 feet in the river between its mouth and Finlay's camp, and upon 800,000 feet of timber in the woods near the camp. The amount claimed aggregates over $3,000. The decision has not been learned.

EXPORTING WOOD PULLEYS.

Power users throughout the Dominion have, of course, come to recognize in the Dodge wood split pulley, manufactured by the Dodge Manufacturing Company, of Toronto, Limited, the acme of perfection in pulleys, and it will not be surprising for them to learn that other parts of the world have become familiar with the superiority of the Dodge products and are sending in orders for the same.

However, the magnitude of this foreign demand for Dodge products will certainly open the eyes of those who have not watched the increasing export trade of this concern, and some idea of this foreign demand may be gained from the fact that among many orders for export recently booked are one for over 2000 wood split pulleys from Australia and one for over 4000 wood split pulleys for England.

Being strictly Canadian made goods, the work of Canadian artsians and the product of Canadian raw materials, it is a source of gratification that foreigners are appreciating the sterling worth of Canadian manufacturers. Every foreign order filled by Canadian institutions will but open the eyes of the buying world to the advantages of buying in the Dominion, and every export order must eventually lead to other inquiries along other lines.

PERSONAL.

Mr. John Taylor has resigned the management of the Taylor Mill Company, Victoria, B.C., a position which he has filled since the company was founded.

Mr. William Rutherford, a well known lumber manufacturer and contractor, of Montreal, died in that city on July 30th. He was past-president of the Caledonian Society.

Mr. William Lambert, timber merchant, of Manchester, England, sailed from Liverpool on July 31st on a business trip to the United States and Canada. He will likely visit Quebec, Montreal, Ottawa and Toronto.

Mr. T. B. Crothers, of St. John, N. B., has removed to Cranbrook, B. C., to engage in the lumber business with his brother, Mr. A. E. Crothers. Crothers Bros. were formerly in the lumber business at Gagetown, N. B.

Mr. John McLeod, manager of the Buffalo business of the R. Laidlaw Lumber Company, was married on August 5, the bride being Miss Tennant, daughter of Mr. F. N. Tennant, lumber merchant, of Toronto. Mr. and Mrs. McLeod will reside in Buffalo.

Mr. W. L. Calhoun, who has been manager for the Prescott Lumber Company at New Mills, N. B., for the past three years, has severed his connection with that firm. On the eve of his departure he was the recipient of a gold chain and dress suit case from the employees.

Mr. Blakeslee, senior member of Charles L. Blakeslee & Son, lumber merchants, Albany, N. Y., passed away last month. Deceased had been engaged in the lumber business in Schnectady and later in Albany for nearly twenty-five years. He was a director of the Lumber Mutual Fire Insurance Company, of Boston, Mass.

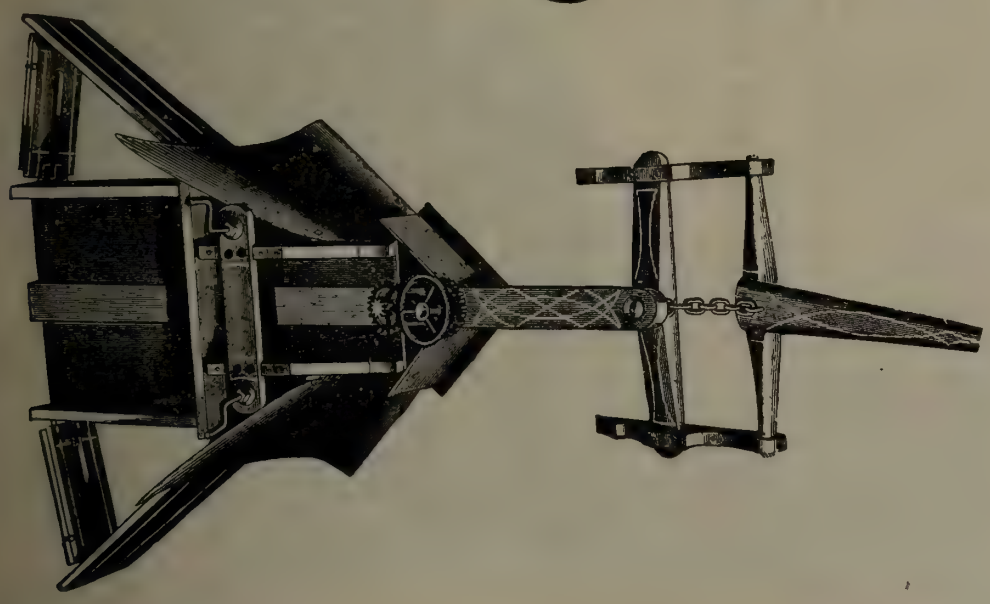
The following gentlemen from England, closely connected with the lumber trade, were representatives at the Congress of Chambers of Commerce of the Empire in Montreal last month: Mr. William Bennett Wilson (of Wilson Bros.), Barnsley; Major William Gradwell, of Barrow-in-Furness; Mr. William Kay, of Bolton; and Mr. W. F. Beardshaw and Mr. H. H. Bedford, of Sheffield.

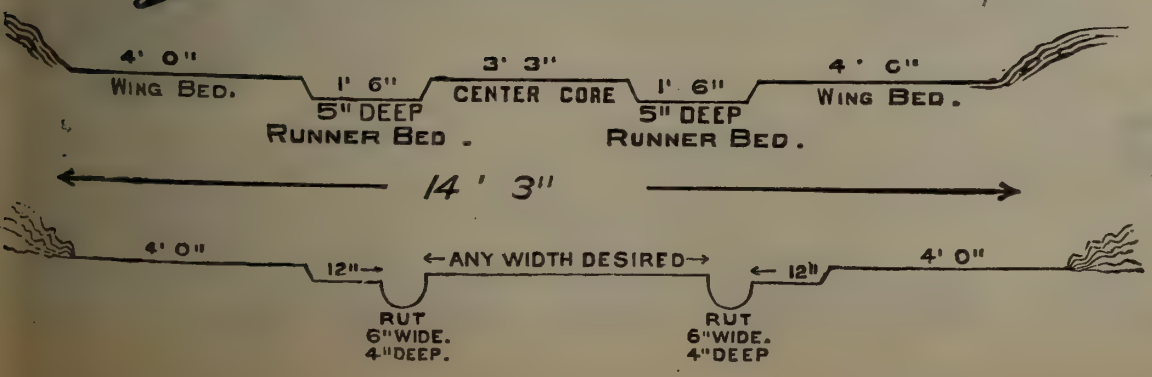
Rev. Alfred Fitzpatrick, of Toronto, general secretary of the Canadian Reading Camp Association, recently spent a short time in British Columbia. While not proposing immediately to establish institutions in this province similar to those that have proved so successful in the lumbering and mining camps of Ontario, Mr. Fitzpatrick's visit was for the purpose of arousing an interest in the work. Should employers and employees promise sufficient support in the matter, it is altogether probable that an organizer will be sent to British Columbia.

Mr. Andrew McCormack, the veteran lumberman, who has for many years been a familiar figure in the Ottawa Valley, and who has been closely associated in business with the late Alexander Fraser, left recently on a tour of exploration. While away he will visit several new limits which he has recently purchased. His trip will be made largely with canoes with Indian guides as companions. Before he returns he expects to travel over four hundred miles in this way. The limits which he is going to visit are up on the Height of Land, towards Hudson's Bay. He went to Pembroke by train and from there will take the boat for a distance up the Ottawa, branching into the timber on the Dumoine river and on to Grand Lake and along the Mattawa river. His return will be made by the Quanz river, a stream running into the Ottawa far north. Almost his entire trip will be through virgin forest heretofore unexplored. It will take him about three months to complete the tour, and for a man of his years the trip is a big undertaking, as Mr. McCormack is seventy-four years old.

The Brazel Patent

Snow Plough and Road Maker





Not a Lumberman in Canada can afford to be without a Snow Plough, Rutter and Road Maker. The foremost and most enterprising men recognize this and have placed their orders.

For use in snow and ice roads. Saves sleighs and harness. Endorsed by all lumbermen who have used them. Cuts six inches wider than sleighs. Rolls snow clear of track. Cuts off knolls, fills up holes. Levels roads perfectly, prevents sleighs from sluing. Cuts off dirt and manure, leaving it on bank. Ploughs up, rolls out and pushes clear 12 inches of loose snow each time machine passes over road.

An attachment for extra team behind machine can be furnished when required. Made all widths.

The Wilkinson Plough Co., Limited, Toronto, control the rights of manufacture and sale. Write for price and description.

THE WILKINSON PLOUGH CO., LIMITED
TORONTO

Ploughs of all kinds, Land Rollers, Drag and Wheel Scrapers, and all kinds of Cultivating nd Stock Raising Implements . . . . .

OVERLAPPING OF TIMBER CLAIMS.

What promises to be a lawsuit of some magnitude has developed from a dispute which arose regarding the ownership of a large tract of timber in Howe Sound, partly on Bowen Island, B. C.

Several years ago approximately 11,000,000 feet of timber were staked by Messrs. Ironsides, Rannie & Campbell, of Vancouver, who have been renewing the records annually since then, and last year Mr. George Magee staked an area of timber back of the other claim, and it is now alleged that in renewing their record Messrs. Ironsides, Rannie & Campbell have included the Magee claim.

Another similar case has occurred at Deer Passage, where the Brunette Saw Mill Company five years ago staked timber valued at $100,000. A couple of years ago it appears that Mr. Shannon staked and secured a record of the same property. He sold to McDougall & Cameron, who spent $7000 in building a chute three-quarters of a mile long and building roads to open up the claim, when Mr. McDonald, representing the Brunette people, turned up and claimed it.

The Brandon Brick & Lumber Company, Limited, has been incorporated, with a capital stock of $100,000.

The International Lumber Company, of Sault Ste. Marie, Ont., are making shipments of veneer to England.

LUMBER COMBINE INVESTIGATION.

The first sitting of the commission to take evidence in regard to the alleged lumber combine in Manitoba and the Territories was held at Winnipeg on August 17th. No evidence was submitted, as neither plaintiffs nor defendants were ready. The commission was adjourned for four weeks.

Advertising death is generally brought about through the existence of one or more of three distinct causes: 1, failure to maintain advertising long enough; 2, failure to take space enough to tell your story properly; 3, failure to give enough attention to such results as are brought to your notice through your advertisers.—Thomas Balmer, in an address before the Life Underwriters' Association of Chicago.

A MODEL KILN

The Kiln adopted exclusively by the Canadian Pacific Railroad Company at its new works at Montreal

Also used exclusively by the Pullman Company, The Brunswick Balke Collender Company and The Wheeler & Wilson Sewing Machine Company.

The most popular Kiln in North America to-day.

The first cost is less.

The building costs less.

It costs less to operate.

Requires less attention and yet dries faster than others with absolutely no injury to lumber.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are

Johnson's Horse Linimint No. 1.
A penetrating Alcoholic Linimint. Put up in one gallon jugs, with full directions, per imperial gal. $4.50

Johnson's Horse Linimint No. 2.
A combination of the best oils used as linimints, imp gallon . . $3.00

Johnson's Horse Colic Remedy.
A sure and speedy cure for colic. Imperial gallon $5.00

Johnson's Veterinary Healing Ointment.
Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada. Put up in 2 lb tins, each . . $2.00 or in ¼ lb tins, per dozen . . $3.50

Johnson's Condition Powders. (Concentrated).
Put up in bulk, per lb . . . . 30c.

These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating linimint, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to $100.

Send postal for printed matter.

THE E. LONG MFG. CO., ORILLIA, ONT.

ALWAYS SOMETHING NEW.

The lumber manufacturer or logging operator who does not read carefully his trade journal is sure to miss many ideas which would be found useful to him in his business. The pages of the CANADA LUMBERMAN contain the advertisements of the most wide-awake manufacturers of saw-mill and wood-working machinery, logging appliances, etc. Every month some new and improved appliance is placed on the market. Keep up with the procession by investigating the adaptability of these appliances to your own particular case, and when the opportunity is presented tell the advertiser how interested you are in his announcements in THE LUMBERMAN.

"Roof Framing Made Easy," by Owen B. Maginnis, New York, is a work valuable to carpenters and planing mill men. The second edition has just been issued, and contains 150 pages and numerous illustrations. We can only give a partial synopsis of the contents: The Principle of the Roof and General Directions; Laying Out and Framing a Simple Roof; Hip and Valley Roofs; Roofs of Irregular Plan; Square Pyramidal Roofs; Pentagonal Roof; Hexagonal Pyramidal Roofs; Conical Roofs; Conical Roof Intersected by a Pitched Roof; Octagonal Roofs; Framing an Octagonal Roof of Gothic Section; Octagonal Molded Roof; Octagonal Roof with Circular Dome; High-Pitched or Church Roof; Mansard Roof; Hemispherical Domes; To Frame a Circular Elliptic Dome.

LUMBER

We represent British Columbia firms; dimension, any size up to one hundred feet; for bridging or heavy buildings; finishing in cedar and fir; also shingles; we quote delivered prices to all points; Ontario lumber, lath and shingles; pine culls, hemlock joist, scantling, and boards, shingles, lath, large or small quantities. Executive Offices:

Nos. 346 and 348 Broadway, NEW YORK CITY, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the company or any of its offices. Correspondence invited.

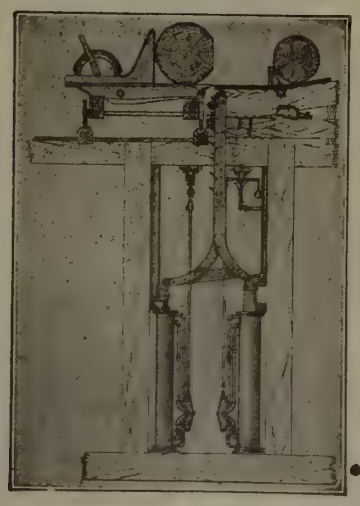
Plain Tales from the Hills



Every thoughtful mill man knows that the best, particularly in the machine line, is none too good when a high grade product is desired. This is the reason why there are more of our stationary niggers in use than all the other types combined and explains why they are constantly replacing machines of other manufacture with ours. The people know the best and want it. Won't you get into the procession, increase your cut several thousand feet per day, and cut down your pay roll?

Just drop us a postal for our catalog B, and learn all about it.

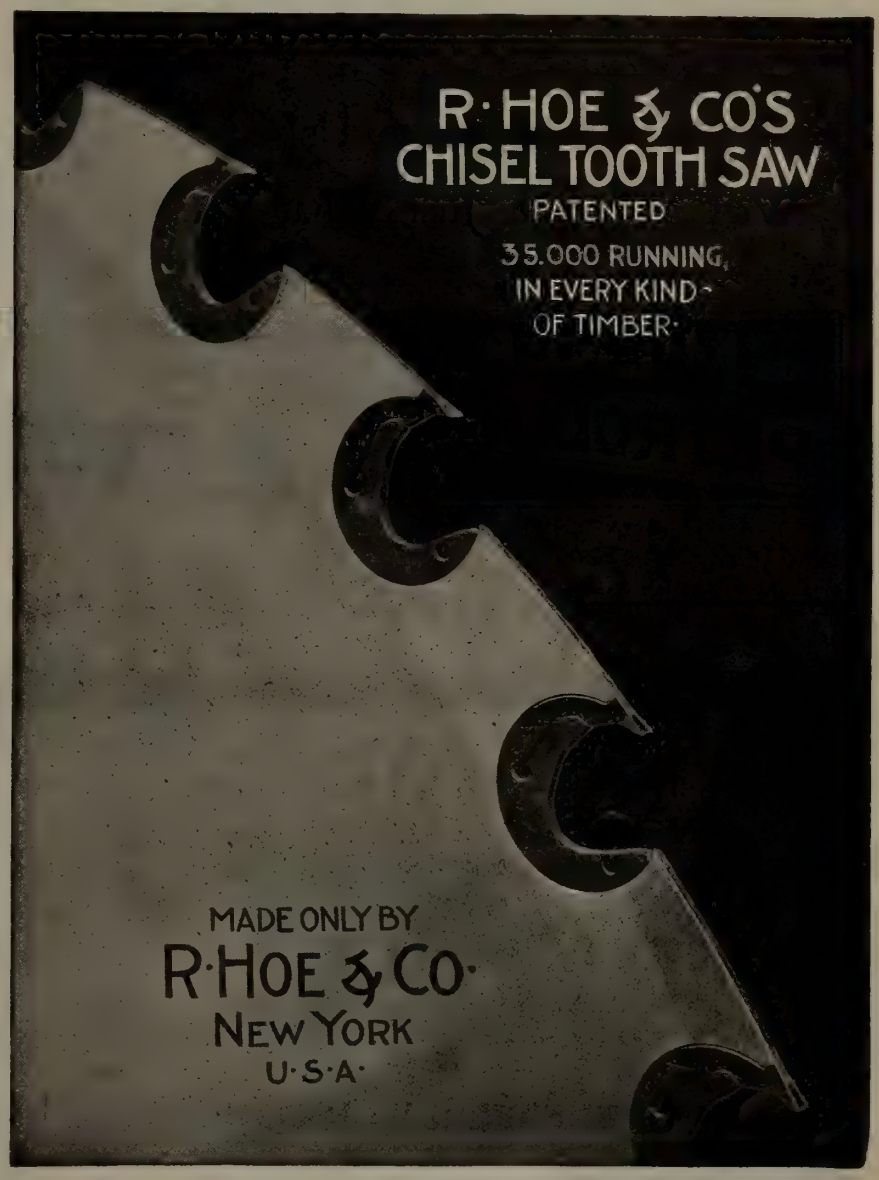
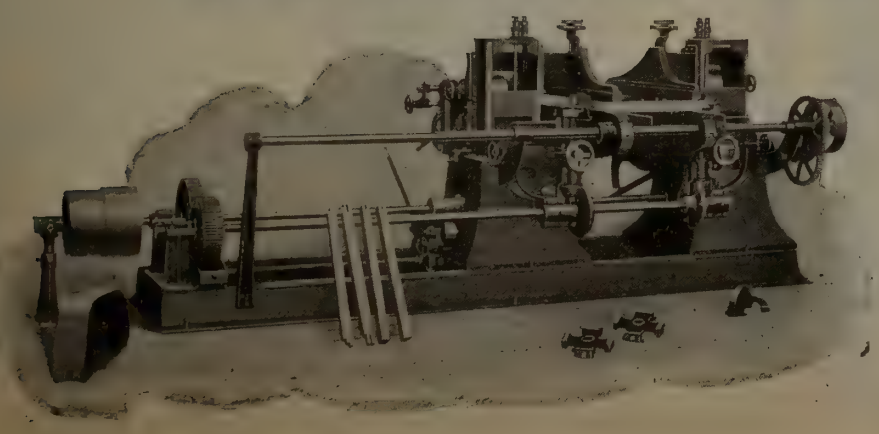
WM. A. HOLT,

ST. ANDREWS, N. B.



The first of its kind on the market. New and original and first introduced by us

E. B. HAYES MACHINE CO., Oshkosh, Wis.



When a new and improved machine that has great merit in it like this one is put onto the market, often times other machinery manufacturers will recognize the fact that it will be a good seller and they will try and start in to copy, of course providing they can do it. We expect it may be the case with this machine, but we know that all the mill men purchasing machines will want the Original, for many mill men in the past have met with great disappointment in buying copied machines. Write for full information.

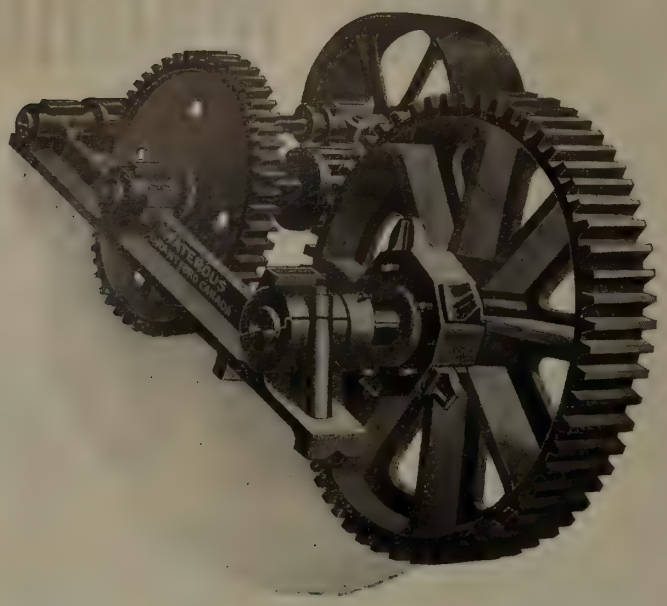
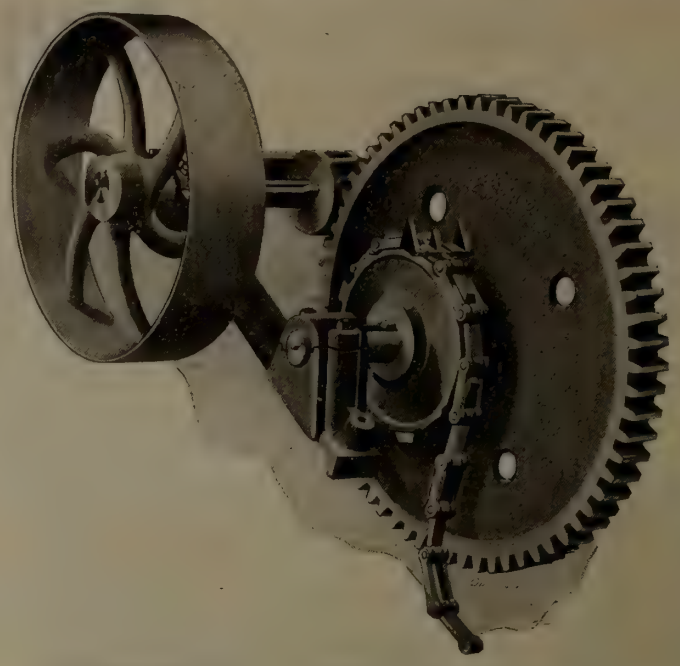
ENDLESS CHAIN BULL-WHEELS OR LOG JACKS



WATEROUS NO. 0 DOUBLE-GEARED LOG JACK

With spur gear to drive from shaft running across mill.

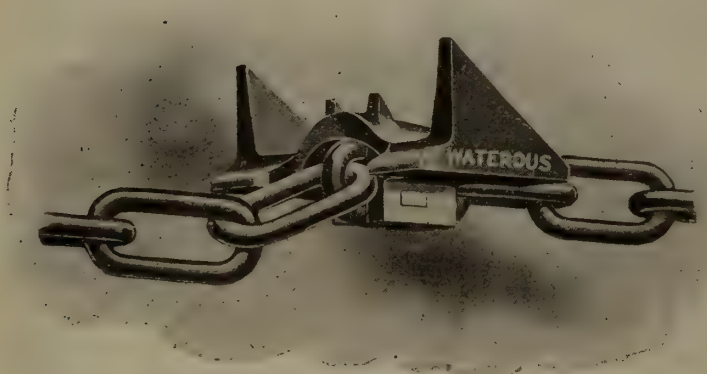
When needed to drive from shaft running lengthwise of mill, we replace smaller spur gears with bevel gears or frictions placed outside of iron frame.



WATEROUS NO. 1 SINGLE-GEARED LOG JACK

With No. 86 log chain. Cast steel spurs and centre links, steel side links, 6″ pitch. No. 80 log chain is the same style but heavier with drop forged center links, 8″ pitch.

PULLEYS CAN BE READILY REPLACED BY STRAIGHT FACE FRICTIONS.



Cable Chain with Cast Iron Log Spurs

Chilled wearing shoes 4x12″ on each side round link. Made 10″, 12″, 14″ wide for 1″, 1¼″ and 1½″ chain. Can't turn on chain.

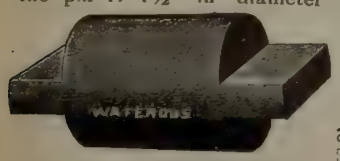
No. 86 Steel Chain (Cast Steel Log Spurs).

Rivets ¾″, side bars 1¾x⅝″, 8″ pitch, center (cast steel) 2¼x6″ pitch. Spurs 9″ point to point.

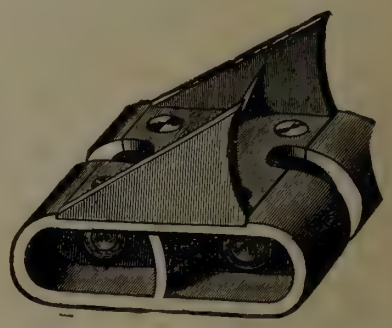
No. 80 Steel Chain

Is 8″ pitch similar to above, except that solid link is a drop steel forging, the pin is 1½″ in diameter (like illustration) and is fixed in position connecting side bars, presenting a large wearing surface for solid link. Side bars 2x1½′

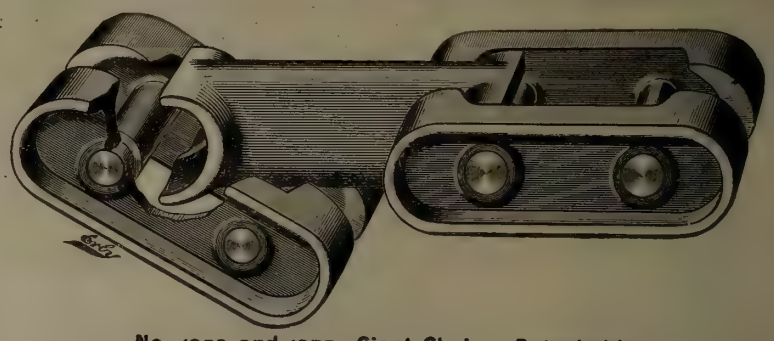
Taking a safety of 4½″ this chain gives a 10,000 lbs. working strain. Log spurs same as No. 86 or of heavy forged steel, any spread desired.



PIN OF NO. 80 CHAIN.



Malleable Log Chains—Detachable, readily applied.



No. 1050 and 1075—Giant Chains, Detachable.

Not recommended for salt water—but there is no better chain for fresh water.

Forged Refuse Chains

R. Double

Outside width 12½ in.—Made of 1½x⅜ in.

The 10 to 15 Tons of Ewart Detachable Link Belting we carry in stock insures prompt shipments.

R. H. SMITH CO., LIMITED

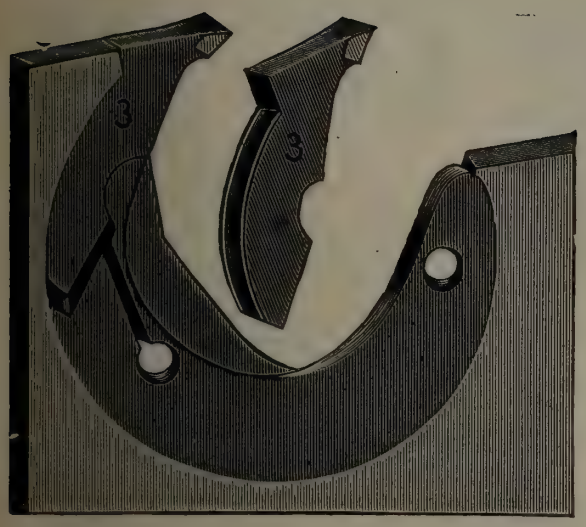
St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

Simond's Process

in the Dominion of Canada.

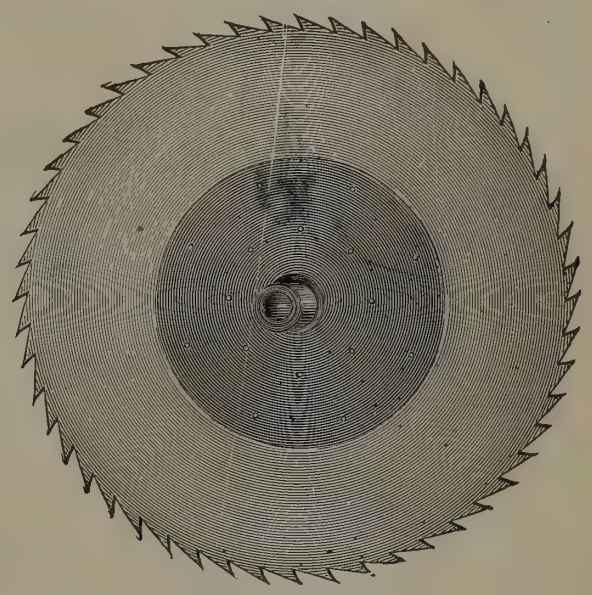
There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.



INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

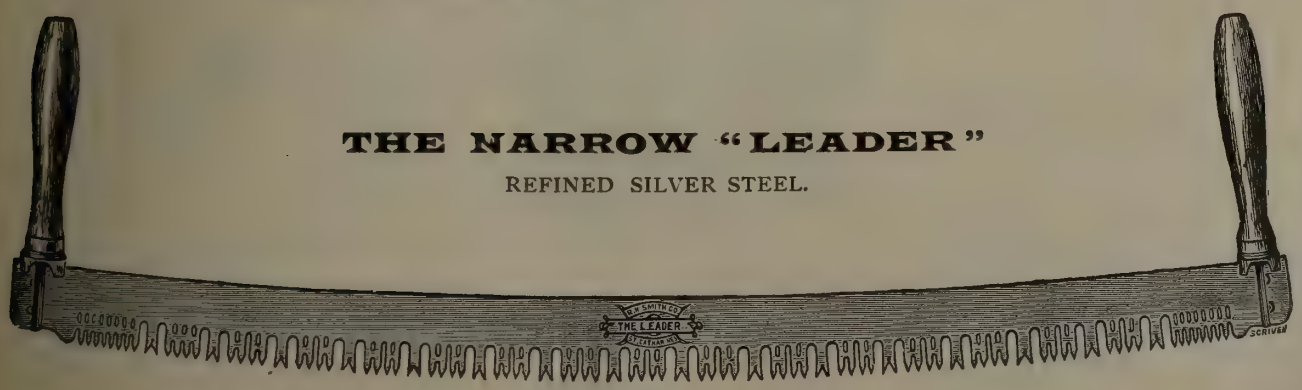


SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS



The Simond's temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Write for prices.

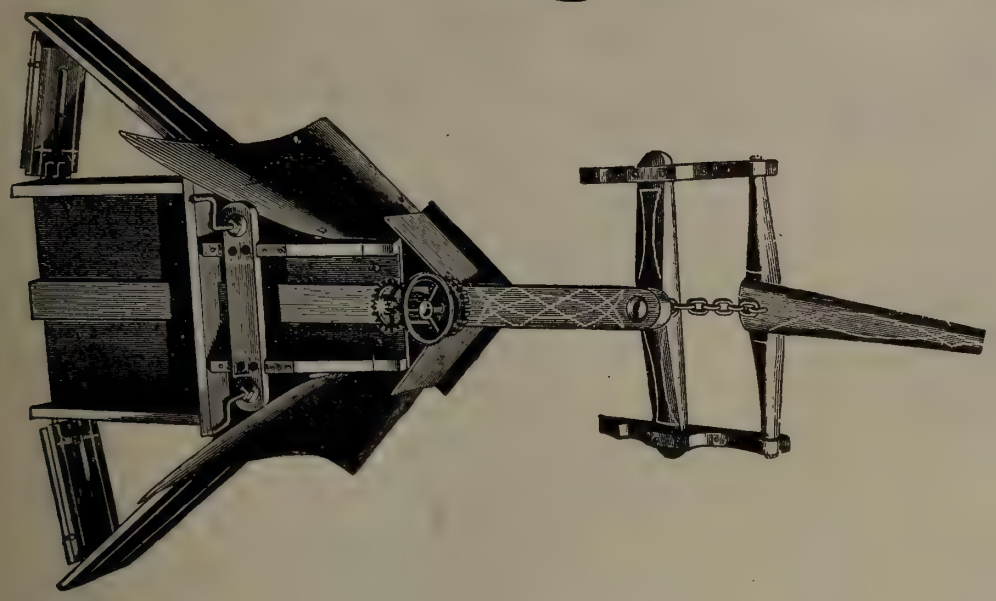
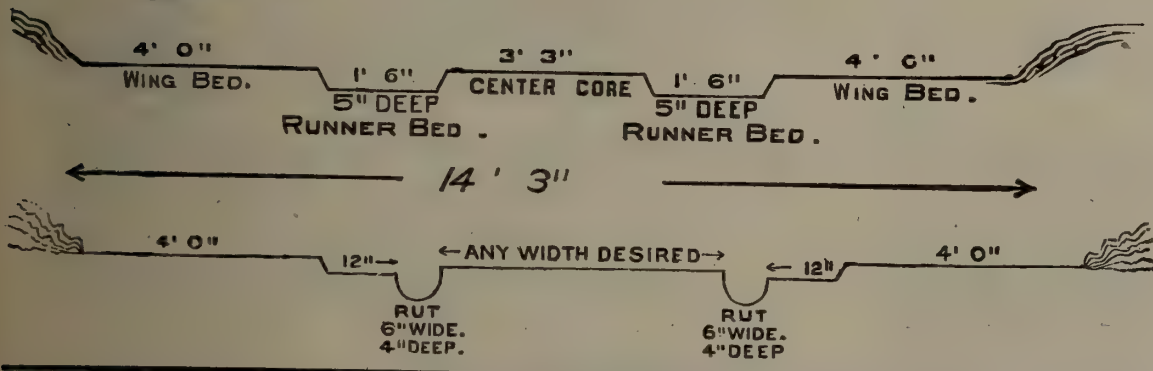
Snow Plough and Road Maker





Not a Lumberman in Canada can afford to be without a Snow Plough, Rutter and Road Maker. The foremost and most enterprising men recognize this and have placed their orders.

For use in snow and ice roads. Saves sleighs and harness. Endorsed by all lumbermen who have used them. Cuts six inches wider than sleighs. Rolls snow clear of track. Cuts off knolls, fills up holes. Levels roads perfectly, prevents sleighs from sluing. Cuts off dirt and manure, leaving it on bank. Ploughs up, rolls out and pushes clear 12 inches of loose snow each time machine passes over road.

An attachment for extra team behind machine can be furnished when required. Made all widths.

The Wilkinson Plough Co., Limited, Toronto, control the rights of manufacture and sale. Write for price and description.

PERFECT SWING SHINGLE MILL

Fitted with our Automatic Trip.

OUR Swing Shingle Mill is all iron and steel and has no complicated parts to get out of order. The saw collar can be removed in five minutes, and replaced by another without changing the set of the machine, thus saving much time when the saw is dull or injured. The machine is well adapted for cutting shingles, headings, etc. Each machine is fitted with our AUTOMATIC TRIP, whereby you get an evenly cut shingle, butt and point alternative, and, being automatic, requires no attention given to it while in operation.

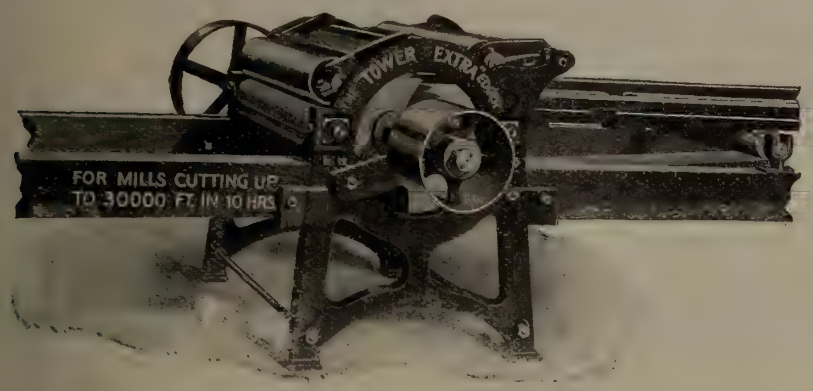
THE GORDON HOLLOW BLAST GRATE

"MAKES THE HOTTEST FIRE OF ANY DEVICE IN EXISTENCE!"

Runs your mill with your refuse, even if wet, green or frozen.

The Tower 2 and 3-Saw Edgers, Improved

For mills cutting not to exceed 20,000 ft. in ten hours.



The Tower Extra 3-Saw Edger

A larger and heavier edition of the TOWER, for mills cutting up to 30,000 ft. There are over 1,100 TOWER and TOWER EXTRA Edgers in daily use.

The Tower One-Man 2-Saw Trimmer

With this trimmer one man can easily trim the output of a mill cutting up to 30,000 ft. in 10 hours.

Eight excellent reasons for the great popularity of the "TOWER" and "TOWER EXTRA" Edgers —

1. They take up little room.
2. They require little power.
3. The feed rolls are adjustable in FOUR directions, which means absolute accuracy.
4. The saws may be removed easily and quickly, without disturbing the arbor.
5. The mechanism for shifting the saws is up-to-date, convenient and positive.
6. The vital parts are carried by a substantial iron husk resting solidly on the floor.
7. They are pre-eminently practical.
8. There is no edger made approaching them in cheapness.

THE FORESTER AN ENGINEER.

BY PROF. B. E. FERNOW.

The first task of the forester, in beginning the management of a forest property, is to provide cheap and efficient means of transportation for the removal of a bulky crop, of which much is inferior, and if possible to so arrange this harvest that it may be made gradually and continually, logging over the same area for a number of years.

Here, in the harvest, logger and forester have similar, yet not identical interests, for the logger lacks the requirement of logging over the same area gradually and continually, of having to remove cordwood, weeds and debris, of caring for the young aftergrowth. Nevertheless, the forester must naturally do much the same as the lumberman, and utilize the engineering skill which has been developed in the logging business.

According to the size and location of his property and the working capital at his disposal, he will resort to old fashioned methods of logging—skidding the logs by horses or mules to skidways, and hauling them on wagons or with sleds on ice roads to the landings; or using lumber slides and water flumes to bring the material either to rivers, which he may have to dam and regulate in their course in order to float and drive the softwoods, or to rail if hardwoods; or else he may benefit from the development of steam logging devices in connection with steam railroads.

Whether the transportation is by rail or water, or by sled or wagon, the locating of the roads is one of the most important functions of the logger. Be it that temporary winter roads or permanent summer roads are to be used, a well planned system of main roads and branches must be located. So important, for financial reasons, is the question of road location considered in German forests, that a permanent road system forms most important initial investment—on our undeveloped lands the only plan is temporary roads.

In logging operations, as now conducted, engineering structures and operations are constantly employed.

Even the felling of such trees as the great western pines is a piece of engineering requiring the greatest skill and judgment. The long shaft must fall so as to clear the surrounding trees, and not destroy its own value and that of others by crushing or lodging. Skidding is now in some forests done by an engine and wire rope. First successfully applied in the cypress swamps of the South, then on the mountains of the Pacific Coast with the ponderous pines and firs, these steam skidding methods promise to supercede the old-fashioned horse and mule wherever large enough masses, especially of hardwoods, are to be lumbered, and where railroads can be profitably employed to bring the log harvest from the forest to the mill.

The present steam-skidding system, first suggested by Mr. J. H. Dickinson, relies upon a stationary hoisting engine, and brings the logs from shorter or longer distances to the cars by wire ropes running over drums, the ropes being disposed in various ways according to the lay of the ground. One of the essential devices is the cast steel nose or cone (Baptist patent), which caps the log automatically when the rope is pulled taut, and steers the log over any stumps, stones, or other impediments.

BURNT PINES, CARSON LAKE, RENFREW COUNTY, ONT.

There are now four different methods of steam skidding used. The simplest, applicable to flat lands, consists in snaking the logs over the ground and assembling them at the cars by means of a hoisting engine and drum, a horse returning the rope with a grappling hook or tongs at the end; the loading is done by a separate rope and drum.

The distance to which this skidding may be done is, of course, dependent upon the length of rope which it is practicable to wind on the drum or drums and to have the horse return. Usually this is not more than 800 to 1,500 feet, when the machine may make from 150 to 250 pulls per day, the cost on the average with a crew of eleven men and three mules being about $24 per day, and the output, of course, dependent on the character of the timber and the log size, which determines the number of feet coming with each pull.

Where the ground is less flat and simple in contour, and where it is preferable to return the rope and grapple automatically, the "slack rope system" may be employed. In this system a wire cable is strung from a head tree near the engine to a stump in the woods, on which travels a carriage (Miller patent), with a specially designed block (Butler's patent) through which the skidding rope with logging tongs works, so as to allow sidewise extension; an outhaul rope, running over a separate drum of the hoisting engine, returns carriage and tongs to the woods, where the tong men pull the rope slack and attach the tongs to the logs lying along the line shorter or longer distances.

The loading on cars is done by a separate set of drums and rigging. To use this system, which may extend to a longer distance than the snaking system satisfactorily, the ground must be tolerably free from rocks and obstructions. According to conditions and distances, from 80 to 120 pulls may be made in a day. A later improvement provides for a number of side lines working simultaneously, by which the efficiency is greatly increased; otherwise horses or mules gather the logs to the pulling line.

In the cypress swamps, where this method is largely used, the machine is placed on a large scow, moving in canals prepared to float the logs. Here the distance to which the skidder works is 2,500 to 4,000 feet, the ponderous logs moving at the rate of 500 to 600 feet a minute, breaking through the timber with thundering noise. Such a pull boat is capable of landing 30,000 to 50,000 feet per day in the water.

In more mountainous districts, where narrow valleys and coves with steep slopes are to be lumbered, the log-gathering system finds its conditions. In this a cable is stretched from slope to slope across the railroad track in the valley, and the logs are gathered to the track by the skidding rope and carriage. The distance to which the system may work, depending somewhat on the degree of slope, may be up to

* Abstract of a lecture delivered at the School of Mining, Kingston, Ont., preliminary to the establishment of a Department of Forestry.

1,000 feet, when from 120 to 150 pulls per day may be made.

In these last two systems up-hill skidding is, to be sure, as easy, or even easier, than down-hill. According to conditions, either of these systems, or any combination of them, or a combination of skidding by horse and steam, or a relay system with several engines placed one after the other reaching out long distances, will give the best results.

The first steam logging railroad was built in Michigan in 1878 by W. S. Gerrish, who was called a hare-brained enthusiast for his innovation, which however, proved successful. Ten years later many such logging roads of 25 and even 45 miles in length, and altogether over 3,000 miles were in existence; in Michigan alone over 720 miles. Now the logging railroad has become so general that the mileage may be estimated to exceed 25,000 miles.

There are still three different kinds of logging railroads in use: The pole road, the tramway with sawed wood rails with or without strap iron capping or flat bar iron rail, and the iron or steel T railroad. Each road has its merits and advantages of its own in given situations, although the regular steel T railroad, all things considered, seems to have found most favor.

In the Cornell College forest a standard gauge with 40-pound steel rail has been used on spurs, and a 46-pound rail on the main road, with a 27-ton engine.

The economical construction of logging roads which are designed to serve only a temporary requirement is one of the engineering problems which more and more interests lumbermen, and even to a greater extent foresters, who are forced to secure even greater economy, since the margins from their business are for a time at least necessarily smaller. In such roads cuts and fills must to avoided as much as possible, while heavy grades, numerous and sharp curves are necessarily to be extensively used, and it takes a careful weighing of saving in cost of first construction against losses in maintenance and efficiency, such as no engineer is called upon to make in constructing standard roads. It stands to reason that to secure the least expensive logging roads, the main effort must be made in the location of the road, for this influences not only the cost of constructing but of operating it. No rules but engineering gumption must determine. Where wood is cheap and right at hand, it is often indicated to use imperfect and unmarketable logs instead of earthwork, or matting of brushwood and cribbing for crossing swamps, and similar devices which do not commend themselves for main line.

In Europe portable tramways and wire rope ways are much employed—the longest, five miles, being in the Alps. Portable railways are sometimes employed in connection with more permanent roads, 2 rails attached to steel ties; each yoke, 10-15 feet long, with 10-24 lb. rail, weighing 75-100 pounds, hook into each other. The newest type has been invented by a forester, and is laid without rails. The log-slide, with or without water, is a device

A Lumbering Railway.

Dam and Timber Slide, McGillivray Lake, Coulonge, Que.

Cataract and Timber Slide, Whitefish River, Algoma.

General View of Logging Operations.

well-known in mountainous or broken regions where water is available. One such in the Sierra Nevada is an incline 4,000 feet long and with a 1,400 feet elevation. It delivers 10,000 cords a day.

Altogether landing places and terminals must be located with circumspection, to take care of the bulky material and secure the cheapest handling of it, which, with cordwood even more than with logs, depends upon the character of the landings.

There are now very generally employed steam loaders; hoisting engines with outhaul ropes running over drums, which pick up the logs alongside the track. Various devices are resorted to to facilitate the passing of cars and to locate the loader with reference to cars and landing places.

In the "Barnhart" and in the "American" loader this is accomplished by having rails laid on the cars on which the loader travels, pulling itself along as needed, the latter on two short portable sections of track, the former on permanent track. Such a loader of the Barnhart type as used in the College forest, will pick up and load from 600 to 800 logs per day, the logs being banked to within 100 feet or so from the track. It is able to move on a pivot in all directions, and the character of the landing place is of little importance.

In the "Decker" log loader the clearing of the track for bringing empties to the loader is accomplished by allowing them to pass underneath the loader over a three-rail section of track, which rises from the main track and is carried by the loader on its lower story.

In forestry work, where the care for the young aftergrowth must be taken into consideration, modification of the methods of procedure will be required. They are, however, directly

Steam Skidding and Loading.

applicable where clearing with artificial planting is practiced, or where the strip system is used, which consists in clearing strips and securing the reproduction by seeds from the neighboring old timber which is left standing. When the forester shall be a fully recognized and established institution in Canada we may expect that he will develop these methods of exploitation to suit the additional requirements of silviculture.

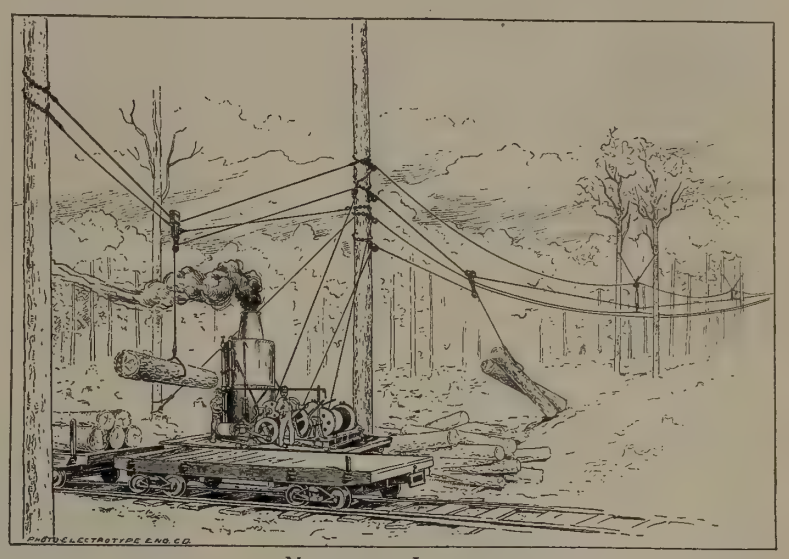
In mechanical engineering, also, there is still a wide field unoccupied, the development of which would aid the business of the forester. We are still relying on brute force for felling trees, sawing them into logs and cutting and splitting cordwood. Attempts to apply steam or electric power in tree felling have so far failed to bring out any practical method. There are now on trial cordwood cutting machines, but they are so far only applicable for very special conditions which can be rarely met.

In entirely different direction is engineering skill demanded, and a special line of forest engineering has developed in connection with the reclamation and reforestation of sand dunes and denuded mountain sides. This has been especially developed by the French foresters, the French government having spent many million dollars in covering the lands and sand dunes of Gascony, and in safeguarding Southern mountain ranges against torrential action induced by deforestation. This forest engineering is now practiced in all countries where forestry is developed and the necessity for this work has been recognized.

The fixation of sand dunes has also been begun in the United States by the Harbor Commissioners of Massachusetts at Cape Cod and elsewhere. It is a simple operation, which consists in first quieting the sand by mechanical means, fences and brush, or turf cover, and by cutting off or breaking the force of the wind by means of an artificially induced forward dune. Then grasses and other deep-rooting and root-creeping plants are used to bind the sand together, and finally tree growth can be established to give permanent protection.

On the denuded mountain slopes it is also first the mechanical quieting of water and soil movement which must precede the work of the forester. This work must begin at the top of the mountains, where the waters gather their momentum into torrents which carry soil and debris to lower levels. By fascine works, revetments and retaining walls the waters are obstructed in their direct descent, and the violent rush over steep slopes is changed into gentle falls, when the pockets behind the breastworks are filled up with the debris and soil. Then when the waters are directed into proper channels and the soil has thus become quieted, sodding and sowing with grass restores the meadow on the gentler slopes, while on the steeper slopes a forest growth is planted and the equilibrium of nature's forces, which man had disturbed to his own detriment by the reckless devastation of the mountain forests, will be gradually re-established.

These glimpses into the problems of an engineering character which are presented to the forester will suffice to justify the claim that he is in need of a considerable amount of engineering knowledge and gumption, which is to be applied under conditions in which it is not usually practicable to employ an engineer.



Method of Logging.

While for main constructions it may be advisable to call in an engineer, at least in consultation, in smaller constructions and in operating roads, railroads, etc., the forester can hardly afford not to be his own engineer. He must have the knowledge which will make him independent of the professional engineer. Students of forestry, therefore, need a course in engineering which will make them acquainted with principles and methods of construction of special interest to them in their business. On the other hand engineers may find a field in solving engineering problems for the forester, and in improving his methods, without becoming professional foresters.

REDWOOD A SUBSTITUTE FOR STEEL.

Although it seems incredible, it is claimed that California redwood has certain qualities which render it, for some purposes, more durable than steel. According to an official report from San Francisco, redwood can more than hold its own against metal as a material for water pipes and certain other purposes.

The engineer of the Niagara Falls Power Company has substituted redwood for steel in the new water tunnel which is now under construction, the reason given for the preference being that when water is passed over the wood a surface of a soapy and pasty nature is formed, which is proof against the corrosion which is said to destroy steel linings in an incredibly short space of time. Pipes formed of redwood are also cheaper than steel, and although the wood is combustible, it burns so slowly as to form a very fair protection against fire in house building.

Joseph Jolette & Fils have registered as saw millers at St. Didace, Que.

DEFINITION OF LUMBER TERMS.

Having been asked for an interpretation of the terms "Mill Run, Culls Out," and "Mill Run," we submitted to a number of lumber manufacturers and dealers throughout the Dominion the following questions :

(1) What is generally understood by the term "Mill run, culls out" in hardwood lumber.

(2) What grades of lumber can a buyer of hardwood demand under a contract reading "Mill run, culls out."

(3) What grades of lumber can a buyer of hardwood demand under a contract reading "Mill run."

The answers received up to the time of going to press will be found below :

J. R. Eaton, Orillia, Ont.: (1) Common and better. (2) Common and better. (3) All lumber, with dead culls out.

Leak & Company, Toronto, Ont. : (1) We would take a everything above mill culls. (2) Everything above mill culls. (3) Everything but mill culls and dead culls.

Gall Lumber Company, Toronto, Ont. : (1) All culls must be out (dead culls, mill culls and shipping culls). (2) Common and better. (3) This would mean the whole log, dead culls and all.

Maitland, Rixon & Co., Owen Sound, Ont.: (1) We would say "mill run, culls out" would be firsts, seconds and common, mill and dead culls out. (2) Firsts, seconds and common. (3) The product of the log, same as log run.

John Harrison & Sons Company, Owen Sound, Ont. : We would understand the term "Mill run, culls out" to mean "mill culls rejected," and would also understand a contract for "mill run" lumber to mean "mill culls out," whether specified or not.

McBean & Verrall, Toronto, Ont.: On account of having no standard set of rules governing Canadian inspection of this grade, we do not recognize the term "mill run" at all. We would say that the interpretation of "mill run, culls out" would mean all culls out, or common and better.

Meaney & Company, Toronto, Ont. : (1) We understand the term "mill run, culls out" to mean all lumber above the grade of mill culls, or in other words it means common and better ; no grade between mill culls and common. (2) "Mill run, culls out" means all grades above and including common. (3) "Mill run" means all grades above and including "mill culls."

Laking, Patterson & Company, Hamilton, Ont. : (1) We presume that the terms "mill run, culls out" and "log run, culls out" are the same, and imply all the cut of the log except culls. (2) We think that under the term "mill run, culls out," the buyer is entitled to all the product of the log except the culls, which would imply common and better. (3) As far as we know there is very little, if any, lumber bought or sold as mill run without the term being qualified in some respect.

Hurdman & Elmitt, Ottawa : (1) It is generally understood among mill men that the term "mill run, culls out" means mill run with dead culls out. (2) He can demand common and better, i. e , mill run; dead, mill and shipping culls out. (3) The term mill run is generally understood to mean mill and dead culls out, but under a contract reading "mill run" a buyer cannot demand other than the total output of log—dead culls and better.

A Manufacturer : Regarding the term "mill run, mill culls out" in hardwood lumber, the way I understand this grading, and which is also the way I inspect my lumber, mill run means the full product of the log, also the logs taken as they are in the raft, that is, there would be no grading of the logs. The grade of lumber that a buyer of hardwood lumber would get would be shipping culls, common and better. This would also cover your third question. I have sold all my hardwood stock this year in this way and this is the inspection I intend to give.

Reid & Company, Toronto, Ont. : (1) "Culls out" means to us "all" culls out. (2) Under contract reading "mill run, culls out" a buyer can demand lumber that will grade common and better, that is, the product of the log with all culls out. (3) A buyer should get under this contract all the log produces if he were slack enough not to make provision for the dead culls at least to be left out. No man understanding his business would make a contract of that kind unless he got the lumber for a very low price and it were understood that he was to take it that way.

The Knight Brothers Company, Burk's Falls, Ont. : (1) The full run of the log excepting mill culls or dead culls (by dead culls we mean lumber that contains less than 50 per cent. of sound cutting). The Americans appear to call this mill cull or No. 3 common. (2) No. 1 and 2 common and mill culls or under N. H. L. Association rules firsts, seconds, No. 1 common and No. 2 common. (3) No. 1 and No. 2 common and mill culls. Further, we wish to observe that the term "mill run, culls out" without reference to any particular inspection rules is not sufficiently definite and may lead to all sorts of misunderstandings and difficulties between buyer and seller.

Davidson & Thackray, Ottawa : (1) The term "mill run, culls out," means that anything that will not make a piece of clear flooring one side is a cull, such as hak es or knot holes or unsound knots. Very often in a hardwood board, say 10 inches wide, you will find a heart that is 2 inches, in a case of that kind we generally measure it 8 inches wide and make it so. (2) That is a matter not easily settled, what one man might call a cull another would not. (3) A buyer of hardwood can only demand mill run, which means everything in the log. In pine lumber it is generally specified mill culls out, but where it distinctly states mill run we would think a buyer would have to take it just as it comes from the log.

Keenan Bros., Owen Sound, Ont.: As to the definition of the term "mill run, culls out" in hardwood lumber, would say that we think this is only a catch term, as we believe it to be an established rule of the hardwood trade that mill culls are not marketable except by special agreement. Consequently the term "mill run, culls out" would mean the full run of the log with mill culls out, and this is the grade that we would accept under a similar agreement, although we would, we think, be particular to specify the grade of culls that we would expect to throw out. We think the fact that mill culls are only marketable by special agreement answers the three questions.

J. S. Findlay, Owen Sound, Ont. : (1) Were a contract worded in this manner, I would take it that it was the intention of the seller to have buyer take stock, shipping culls and better, but on the other hand a sharp buyer could contend that he was only entitled to take common and better, ann leave the shipping culls on the seller's hands. From the seller's point of view, the contract should read, "Mill run, mill culls out." This answer will cover questions No. 1 and 2. (3) In a contract reading thus, I would say that the buyer would be entitled to take the entire run of the log, with the exception of what is called "Dead Culls"—pieces of lumber that are of no marketable value as lumber, and for which no permanent market is known. These questions have always been a subject of more or less dispute, and partake somewhat of the nature of the question, "What colour is red ?" and "What colour no colour at all."

Rhodes, Curry & Co., Amherst, Nova Scotia : (1) Our understanding of the term "mill run with culls out" is that the purchaser gets all the merchantable lumber in the log ; that all the clears and better grades are to be left in, the only thing taken out being the culls, or, as we would call it in the Lower Provinces, refuse ; and we would say that if a mill man sold on above specification and kept out any portion of the better lumber, he would be violating the contract. (3) If the buyer agrees to take mill run, it would mean that he would take all the lumber made from the log, including the refuse, and it would naturally be inferred that the buyer in any of the three cases would get a fair average of all the logs on hand ; that is, the mill man would not be allowed to select the poorer classes of logs to saw under a mill run contract.

R. E. Kinsman, Hamilton, Ont. : Considering that the regular grades of hardwood lumber here are No. 1 and 2, common, culls and dead culls, I maintain that "mill run, culls out" means all the better end, that is, No. 1 and 2 and common, with culls and dead culls out. "Mill run" I consider includes everything except dead culls. I have run across a few men who claim that there is a grade between common and culls, which they choose to give the name of shipping culls, that should go in when "mill run, culls out" is bought, but I do not agree with them. Buying lumber either mill run or mill culls out is very unsatisfactory for the simple reason that nearly all of the mills cut the best of their lumber into dimension stuff or the thicker sizes. I never yet met a mill man who sold his lumber "mill run, culls out" or "mill run." When this dimension stuff and thicker sizes are taken out of the best logs and the best cuts of all the logs, what is left to be sawn into 1 or 1¼ inch is not "mill run, culls out," nor "mill run." This is one of the worst features about the hardwood business that exists at the present time. It would do a man's eyes good to see a stock of lumber sawn honestly as mill run.

J. D. Shier Lumber Co., Bracebridge, Ont. : (1) The Canadian inspection has only recognized two grades of culls, viz., dead culls and mill culls, and "mill run, culls out" is an American term for hardwood inspection, as they put up what is termed firsts and seconds, No. 1 and 2 common ; the No. 2 common is sometimes called shipping culls. Their term of mill run, culls out, would therefore be firsts and seconds and No. 1 common. If a Canadian hardwood man were interpreting this he would style it common and better, which would mean mill culls out. (2) It would altogether depend as to whether the contract was made in Canada or in the United States, as you can readily see from our answer to the first question. We would say mill run, culls out, would mean common and better, mill culls out. (3) It has been pretty well answered in both the first and the second question, although some people might interpret it to mean mill culls and better, with the dead culls out. In our opinion there should be a reconstruction of the grading of hardwood lumber, as we consider it the greatest farce that was ever imposed on the public.

George Rathbone, Toronto, Ont. : (1) The lumber supplied under that heading would require to be common and better, as it states that the quality is to be mill run with the culls out, and this would make the grade common and better when the culls had been taken out of the product of the log. (2) I would consider that the buyer would be entitled to a grade of common and better, as it distinctly states that the culls are to be taken out. (3) This question is liable to different constructions, but as far as my experience goes, all the lumber I have purchased under this heading, it has always been implied, though not distinctly stated, that the culls would be out, and I have found very little difficulty with the inspection of lumber upon orders given in that way. The American inspection, as adopted by the National Hardwood Association, is better defined than our supposed Canadian inspection, and "log run" comprises four grades in hardwoods, firsts and seconds, common and culls, with the mill culls out, the mill culls being classed in a separate grade. In my opinion steps should be taken by our Canadian hardwood lumber manufacturers to form an association similar to the American one, and adopt a proper code of inspection rules that would be suitable to the trade. At the present time we really have no standard inspection, but each mill man makes his own grade, and in a great many cases the grades are very unreliable. As hardwoods are coming into use extensively it would be an advantage to manufacturers and consumers if we had a better system of grading our hardwoods in Canada.

The Knechtel Furniture Co., Hanover, Ont.: The term "mill run with mill culls out" is generally applied to a log run, and it should be called "log run," not "mill run." A log run includes the following grades : No's. 1 and 2, No. 1 common, No. 2 common, or shipping cull, and all of the better grades must be included. It would seem to be necessary that an intelligent buyer should see the logs before they are sawn in order to determine the price according to the quality. If, however, that is neglected, the buyer can have no redress as against an unduly large proportion of common and cull or No. 1 and 2 common in the log run. Hearts are considered of no market value in hardwood, and must be sawn out. If, however, any of them are left in the lumber, the inspector may measure them out or reject the piece as a dead cull. The technical term of "mill run" means quite a different thing. It includes practically everything (no matter how bad) a saw mill man may see fit to pile up. He is under this term not even bound to put the whole of the upper grades into this run. "Mill cull" means a piece of lumber spoiled in the milling, or all mis-sawn lumber. Anyone buying lumber under this term should first ascertain how much, if any, of the upper grades were taken out and sold or held for sale at a higher price, and only after this information is obtained, set the price on the lumber. "Pile run," we think, would be a better term for this class of lumber. Unless stated "mill culls" or "dead culls out" on the order we presume that everything will have to go. In common and better not less than 50 per cent. are expected to be No. 1 and 2.

Alex. McKee, buyer for Massey-Harris Co., Toronto : (1) A question of this kind would be misleading and would leave a loop hole for litigation if either of the parties to the deal were inclined to be crooked. (2) A contract made in this form would in my opinion give

the buyer the right to throw out everything up to a common grade. (3) I think under this clause a contract drawn in this way and mutually agreed to by seller and buyer would compel the buyer to take everything the log produced except the heart. Contracts should be drawn in this way, "mill run, hearts and dead culls out." This would only throw out such lumber in hardwood as would not be worth the freight to the buyer. Contracts are often made to read "mill run, mill culls out." Mill culls are boards in hardwood which, while valueless for manufacturing purposes, are often used for rough planking or boarding up; the next grade would be called shipping culls, out of which grade manufacturers of furniture could cut many small clean pieces suitable to their trade. To avoid legal quibbles and chances for dishonesty in inspection all contracts should be worded as outlined above. Some time ago I was called as a witness in a lumber suit re. Stinson vs. Purdy. Stinson made a contract with Purdy for 200 M feet, the contract read "mill run." When he went to ship it he was throwing out all the mill culls; Purdy stopped him saying that he sold it to him mill run. Stinson brought suit to recover damages. He brought many witnesses who swore that in basswood "mill run" meant mill culls out. I was called for the defendant and explained that we always specified in our contracts "mill run, dead culls out," or if we bought it "mill run, mill culls out," it was so specified. Judge Morgan after reserving decision decided the case in favor of the defendant "Purdy."

The opinion of the CANADA LUMBERMAN is that the term "mill run, culls out" would imply common and better, and "mill run" the entire product of the log excepting dead culls, which are considered to be refuse and not marketable lumber.

THE CANADIAN MANUFACTURERS' ASSOCIATION.

The thirty-second general annual meeting of the Canadian Manufacturers Association was held in Toronto on September 16th, 17th and 18th, the headquarters being the King Edward Hotel. It was a most successful and important meeting, about 300 members being present from all parts of the Dominion. The report of the secretary showed that the membership had grown from 132 in 1899 to 1,272 in 1903, and for the first time in several years a surplus of receipts above expenditures was shown.

The Association adopted resolutions demanding an immediate and thorough revision of the tariff upon lines which will more effectually transfer to the workshops of our Dominion the manufacture of many of the goods which we now import from other countries, but giving a substantial preference to the Mother Country and also to any other part of the British Empire with which reciprocal preferential trade can be arranged; recommending the establishment of a permanent commission of experts to have constant supervision of tariff policy and changes; urging the Dominion Government to enact a general Dominion insolvency act; and urging the amendment of the present preferential regulations as applying to British goods so as to increase the required percentage of British labor from 25 to 50 per cent. of the value of the goods, with the object of preventing foreign manufacturing firms from taking advantage of the preference through fraudulent means.

The registration list included the following persons: C. H. Carrier, Carrier, Laine & Co., Quebec; R. O. McCulloch, Goldie-McCulloch Co., Ltd., Galt; C. W. Leonard, E. Leonard & Sons, London; C. Howard Smith, Kinleith Paper Co., Toronto; O. N. Scott, Morris Field Rogers Co., Listowel; Geo. W. Watts, Canadian General Electric Co., Toronto; F.B. Polson, Polson Iron Works, Toronto; Dan. Wilson, Wilson Bros., Collingwood; Jas. Maxwell, D. Maxwell & Sons, St Mary's; J. E. Murphy, Owen Sound Portland Cemen Co., Owen Sound; E. Guillet, E. Guillet & Co., Marietville, Que.; W. B. Tindall, Parry Sound Lumber Co., Toronto; W. J. Barchard, Barchard & Co., Ltd., Toronto; E. G. E. Folkes, Wilkinson Plough Co., Toronto; H. P. Coburn, Sawyer & Massey Co., Ltd., Hamilton; John McClelland, Parry Sound Lumber Co.; W. H. Merritt, National Table Co., Ltd., Owen Sound; William Hamilton, William Hamilton Mfg. Co., Peterboro; T. H. Hamilton, Grant-Hamilton Oil Co., Toronto; H. D. Eby, Eby, Blain Co., Toronto; George F. Haworth, Sadler & Haworth, Toronto; A. S. Rogers, Queen City Oil Co., Ltd., Toronto; Fred Mallison, Canadian Skewer Co., Ltd., Hespeler; C. H. Waterous, Waterous Engine Works Co., Brantford; W. T. Thomas and E. H. Thomas, Thomas Bros., Ltd., St. Thomas; W. R. Pringle, Rolland Paper Co., Toronto; G. F. Cleveland, J. L. Goodhue & Co., Danville, Que.; John J. Main, Can. Heine Safety Boiler Co., Toronto; Scott Chisholm, Alfred Dickie, Halifax, N.S.; C. N. Candee, Gutta Percha & Rubber Mfg. Co., Toronto; W. J. Green, Canada Wood Mfg. Co., Farnham, Que.; J. D. Flavelle, Flavelle Milling Co., Lindsay; F. S. Pearce, The Pearce Co., Ltd., Marmora; J. J. Turner, jr., J. J. Turner & Sons, Peterboro; John R. Barber, Toronto Paper Co. and William Barber & Bros., Georgetown; O. E. Fleming, Windsor Turned Goods Co., Windsor; Samuel and H. S. May, Dodge Mfg. Co., Toronto.

The "Alex. Fraser," one of the finest steamers of the Upper Ottawa Improvement Company's fleet, recently sunk about five miles up the river from Pembroke, while aiding the alligator in getting a tow in position. The accident was caused by striking a rock, knocking a large hole in the side of the vessel.

THE CANADIAN CASUALTY & BOILER INSURANCE COMPANY.

This company, as its name implies, has been founded for the purpose of a general accident business as well as boiler insurance and inspection, and has in the short time of its existence already established itself well in the insurance world. This is scarcely to be wondered at in view of the fact that the directors of the company have spared no endeavors to make the staff of the company a thoroughly competent and efficient one. The managing director, Mr. A. G. C. Dinnick, himself a man of great business experience and ability, has a special gift of choosing good men for the various departments of his institution. The chief engineer of the company, Mr. A. M. Wickens, is a gentleman without a peer in his profession. Until recently he held the position of chief engineer of the Public Works Department of the Ontario Government, as well as Inspector of Boilers in the Government Institutions. He resigned this position in order to accept the appointment offered to him by the Canadian Casualty & Boiler Insurance Company as their chief engineer. With an expert like Mr. Wickens at the head of the engineer's department it is safe to say that the interests of the insurers will be well looked after, as everybody knows how important is periodical inspection by a competent and experienced engineer. As an engineer erecting and operating steam plants, Mr. Wickens brings expert practical knowledge to bear upon his deliberations as chief of the engineer's department of the Canadian Casualty & Boiler Insurance Company.

The efficiency of the engineer's department enables this company to extend its operations in a way few other companies can follow. The company is in a position to give expert advice upon the erection of any kind of steam or electrical plants, a feature which interested parties will presumably be quick to take advantage of.

The public have been quick to recognize the advantages offered to them by this company, and the amount of policies already written is the best proof of this contention. With the energetic management and the practical knowledge combined, the Canadian Casualty & Boiler Insurance Company is sure to take a leading place in its class of business.

The value to steam users, lumber, planing and saw mills, of The Canadian Casualty & Boiler Insurance Company, cannot be over-estimated. Their services are in demand, and we are given to understand from the managing director that many unsolicited letters are being received at the head office, appreciating the satisfactory methods adopted in the desire of this corporation to make their services effective and of practical value to steam users. In many instances savings have been effected in fuel consumption which insurers have acknowledged have been more than sufficient to pay for the small premium charged for boiler insurance for the full term of the policy.

Such service as this is being looked upon with increasing favor, and the courteous readiness of the management in promptly attending to all matters in connection with steam plants under the company's care, cannot help but increase the already large clientele which this company enjoys.

In one case brought to our representative's notice, a saving of one month's fuel paid for a three years' policy.

The Canadian Casualty & Boiler Insurance Company do not under any circumstances make suggestions which occasion steam users unnecessary expense; such minor suggestions as are at all times economically beneficial are in many cases carried out at the company's instance.

MR. A. M. WICKENS, Chief Engineer. MR. A. G. C. DINNICK, Managing Director.
THE CANADIAN CASUALTY & BOILER INSURANCE COMPANY.

THE Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance.. $ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.
ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

THE NEW TRANS-CONTINENTAL RAILWAY.

Political prejudice has been responsible for many of the opinions offered respecting the proposed trans-continental railway project for Canada. So far has this been the case, apparently, that the public have refused to accept the statements of even the most unbiased and independent person. That we need greater transportation facilities for the Dominion, and particularly for the west, is certain, but it is a question whether the building of a new road across the entire continent is warranted, at least at the present time.

The proposed road will extend from Moncton to Port Simpson and will be 3,300 miles long. From Moncton to Winnipeg the distance is estimated at 1,800 miles, and from Winnipeg to Port Simpson, on the Pacific Ocean, 1,500 miles. The eastern section from Moncton to Winnipeg will be built by the Government and leased to the Grand Trunk Pacific for a period of fifty years. From Winnipeg to the Pacific Ocean the road will be constructed by the Grand Trunk Pacific within seven years. The Government will guarantee 75 per cent. of the cost of construction up to a maximum of $13,000 per mile on the prairie division between Winnipeg and Edmonton, and $30,000 per mile for the mountain division between Edmonton and the Pacific Ocean.

It has been contended that in the northern part of Ontario and Quebec the road will pass through a desert section, but this is scarcely correct, for the greater portion of the route in these provinces will open up for the first time vast timber areas. Mr. Thomas Mackay, M.P. for North Renfrew, than whom there is no better authority on the timber resources of the Ottawa valley, states that there is sufficient timber to keep the railway supplied with freight for ten years. It is probable, therefore, that the building of the road will stimulate the lumber industry and that many saw mills will be established along the route.

SAFEGUARD YOUR PROPERTY.

The lumbermen of Canada have for some time past been protesting against high insurance rates. The underwriters have gradually increased their premiums until the charge has become very burdensome, and now steps are to be taken, at least in Ontario, to endeavor to obtain insurance at more reasonable and equitable rates. This is proposed to be done by the incorporation of a company composed chiefly of lumbermen, which will accept risks on lumber and lumber property exclusively. The progress already made gives assurance of success, and judging by the experience of similar companies in the United States, whose announcements regularly appear in this paper, it should result in a considerable reduction in the premium rate.

This co-operative plan of insurance will encourage lumbermen to perfect means of effectively protecting their property from fire. No doubt carelessness and lack of necessary precautions have been responsible for many fires in the past, this disposition, perhaps, being engendered by the knowledge of the fact that any possible loss would be covered by the insurance. Co-insurance creates an incentive to reduce the fire hazard to the minimum.

A saw mill is naturally a place where inflammable debris will accumulate very quickly and be a great source of danger. It follows, therefore, that proper attention should be given by the mill man to cleanliness, which is next in importance to providing adequate fire-protective appliances. Another necessary precaution is to remove the lumber piles a sufficient distance from the mill.

UTILIZATION OF HEMLOCK BARK.

A recent request from a British Columbia lumberman for advice concerning the possibility of profitably utilizing the hemlock bark accruing from his lumbering operations suggests the large quantity of this material that is now wasted for lack of a market. Considering the vast amount of hemlock timber which is cut annually throughout the Dominion, and the fact that hemlock bark is the most generally used material for tanning purposes, it should be possible not only to produce all the tannic acid required by the tanners of this country, but also to build up a considerable export business in this article. At the present time a considerable quantity of tannic acid, extracted from oak, hemlock and other timber, is imported from the United States.

The present method of hauling the bark to the local tanneries to undergo the necessary treatment for extraction of the acid is a costly undertaking, and if the tanning ingredients could be separated from the bark at the source of supply a large saving in the cost of transportation would be effected. To our knowledge no tanner or lumberman in this country has established a plant solely for the purpose of producing the hemlock extract, but it would seem that an enterprise of this kind might be profitable. In the United States large permanent extract plants have been established which make tannin and dyewood extracts from materials gathered from all parts of the world. Something less pretentious would be required in this country.

For suggestions we must look to Germany. In that country there have been established a number of small plants, consisting of a cheap portable power, a bark cutter or grinder and wooden extraction vats, set up near the source of supply. These make a fairly concentrated extract.

Mr. J. A. DeCew describes the process of manufacture as follows: After the bark is peeled it should be treated as soon as possible and consumed the same year. It may be cut into fine shavings by being fed from the end against a serious of revolving knives, and as each shaving is a thin transverse section of the bark cells the tannin is extracted without difficulty. It is now placed in a series of ten wooden tanks, which are arranged in a circle, the bottom of each being connected by a pipe to the top of the other. Steam from the boiler is now turned into No. 1 and passes through each in turn, until it is drawn off from No. 10 as a quite concentrated extract. A number of these vats are employed because the extraction of the tannin depends upon the laws of diffusion. Thus, in boiling water, the tannin will leave the bark and become diffused throughout the solvent until equilibrium is established. If the solution is now removed and more solvent added the tannin remaining in the bark will become diffused, forming a weaker solution, and if this process is continued all of the tannin will be finally extracted. Therefore, if hot water is passed successively through ten vats, in which the bark of No. 2 is richer than No. 1, and No. 3 richer than No. 2, etc., it is evident that the solution must become continually stronger as it passes through each in turn, and when discharged from No. 10 is a quite concentrated extract. When the tannin in tank No. 1 is exhausted it is refilled and then becomes No. 10.

It is evident from the above that the extraction of tanning material is not an elaborate process. The possibilities in the development of the industry should appeal to lumbermen, as it could be carried on in harmony with lumbering operations. A merchantable tanning extract may be obtained from oak, ash and birch as well as hemlock.

EDITORIAL NOTES.

More than a year ago the CANADA LUMBERMAN called attention to the danger of an overproduction of red cedar shingles on account of the rapid increase in the number of mills. This condition has already arisen, much to the discomfort of many firms engaged in that industry. Following the increased production came a decline in prices, and some manufacturers, being unable to dispose of their output at a fair margin of profit, have been badly crippled financially. It seems most difficult to regulate the production of shingles, inasmuch as a shingle mill equipment is comparatively inexpensive, and when prices are good outsiders are attracted to the business. It is hoped that

a plan now being worked out to regulate the production in British Columbia and Washington will prove successful and confine the output more nearly to the demand. The plan involves the apportioning of the output, according to the demand, among the various mills, with an agreement that no mill shall manufacture more than the specified amount. If the manufacturers hold together as they should some benefit will doubtless accrue from the plan; if not, the market will continue to be glutted.

Experience seems to have demonstrated that close piling of dry lumber is the most satisfac-

Fig. 1.—What if the Pole Should Break?

tory method. The lumber should be properly covered in order to exclude rain, but if this is done and the lumber is dry before being placed in the pile deterioration will be prevented by this method of piling. Loosely piled lumber, and particularly hardwood, is likely to suffer in quality and color and to be marked by damp cross-bars. Another advantage of dead piling is the saving of room. Most lumbermen make the piles level, with the ends even or slightly carrying forward. Dressed and matched lum-

Fig. 2.—I Told You So.

ber frequently becomes seriously damaged by being open piled for any length of time.

It is the intention of Scott Bros., who recently purchased the Victoria saw mill at Fredericton, N.B., to make improvements thereto and erect a rotary mill at Sand Cove, on Magaguadivac Lake. It is probable that the business will be turned into a stock company, under the name of the Scott Lumber Company.

THE GOODYEAR PATENT LOAD BINDER.

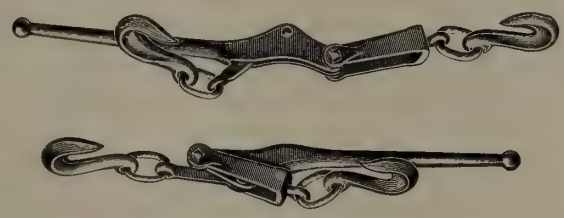
"Just like father did" has been the manner of binding loads to wagons ever since that useful vehicle was invented. Time with our fathers seemed to be no object. It was a tug and a pull; cut and try; and cuss words—as numerous as the sands of the sea or the stars in the heavens.

Many accidents like this finally did set one fellow to thinking and he conceived the idea of using a piece of gas pipe about three feet long to twist up the chain like an improvised tourniquet. The only reason this method has not killed and maimed as many people as the old pole of our grandfathers is because it has not been in use so long.

The use of these crude instruments, making teaming almost as dangerous as going to war, induced a blacksmith to do some thinking. He had the skill to perfect with his hands what his brain conceived, and the result was the Goodyear patent load binder.

Thousands of these have been sold and they are in use in nearly every part of the United States, in Canada and Australia. Not only are they used to bind loads of logs, but lumber, pipe, poles, hay, straw and almost every conceivable thing is securely fastened with this handy device.

It binds by simply taking up the slack in the chain after the latter has encircled the load. Being made of malleable iron through-



This Is It.

out, it may be drawn as tightly as desired, having ample strength to break the chain. The strength required to close the lever to bind an ordinary load is so little that a small boy can easily close it. A large load, or one requiring to be bound extra tight, requires more power, but always within the limit of a teamster.

The binder fits any chain from one-fourth to eleven-sixteenths of an inch. The amount of slack that can be taken up can be varied from nothing to about five inches, and the latter amount is enough to bind any load. With lumber or logs three inches is sufficient. The time required to apply it is practically nothing, only a few seconds being necessary to secure any load.

With any manner of binding, a load often works loose on a long or rough haul, and here is where the Goodyear load binder is particularly a great time saver, because a link or two can be taken up and the team started before the pole or bar of iron could have been loosened.

Returning with empty wagon, the binder may be attached to the chain—which is usually wrapped around the bolsters, and a little slack taken up, insuring not only its safe return, but preventing the chain from working loose and becoming lost.

With the chain in any position, from straight and taut to sharply curved and loose, this binder may be applied, making it practicable for binding a single timber or pole as well as the largest load. Being capable of regulation it is recommended for binding loads of soft or finished lumber, because just enough slack may be taken up to insure the load from slipping and yet not injure the

Fig. 3.—The Goodyear Way of Binding.

lumber by imbedding the chain. The price is $2.00 each.

A trial is recommended and no matter how thorough, the manufacturers provide for the refund of money if the binders do not prove entirely satisfactory. Eugene C. Stacy, Bloomdale, O., U. S. A., is general agent for the Goodyear Load Binder.

DEATH OF J. W. MUNRO, JR.

J. W. Munro, Jr., eldest son of the late J. W. Munro, M.P.P., of Pembroke, Ont., died

Fig. 4.—Bound.

at his home on September 18th, after a somewhat prolonged illness. He was twenty-five years of age and had for several years been engaged with his father in the lumber business. He was a young man of great ability, and his death has removed one who, had he lived, would have been of great benefit to the community.

G W. Schneider has sold his saw mill near Listowel, Ont., to Charles Neilson, of Sault Ste. Marie, and Dr. Turnbull, of Goderich.

J. B. Dorfman, timber cruiser for A. W. Wilson & Company, of San Francisco, states that it is probable that a large saw mill will be built at Nanaimo, B.C., the company named having acquired large timber limits in the vicinity of Comox.

THE TORONTO EXHIBITION.

The recent Dominion Exhibition held in Toronto under the auspices of the Industrial Exhibition Association was very successful from the standpoint both of attendance and character of exhibits. An attendance exceeding half a million persons is indeed a splendid record and must be a source of encouragement to the management. The new buildings are attractive in appearance, of massive construction, and well adapted to the purposes for which the are intended.

Speaking for the lumber trade, it is to be regretted that there was not a more extensive display of saw milling and woodworking machinery and appliances which would interest and instruct the mill man. Many of our largest manufacturers were not numbered among the exhibitors. It might be suggested that the directors endeavor to devise some means of securing for future exhibitions a greater representation of manufacturers from all parts of the Dominion.

In the Machinery Hall were found four exhibitors of belting.

D. K. McLaren, of Montreal and Toronto, showed English oak-tanned leather belting, balata and rubber belting, as well as card cloth, cotton mill supplies and belt hooks.

The Dominion Belting Company, Hamilton, have been in business but a short time, but their display indicated that they are strong competitors for the belting trade. They showed the "Maple Leaf" brand of stitched cotton duck belting, also " Maple Leaf " belt dressing, claimed to add materially to the life and efficiency of a belt.

Several pyramids of oak-tanned leather belting were shown by the J. C. McLaren Belting Company, of Montreal and Toronto. This firm have been making leather belts for forty-seven years, and manufacture only high grade English oak-tanned stock.

A large Goldie & McCulloch engine operating the shafting on the north side of the hall was driven by a 20 inch 3-ply belt manufactured by Sadler & Haworth, of Montreal and Toronto.

The Hart Corundum Wheel Company, of Hamilton, successors to the Hart Emery Wheel Company, had an attractive exhibit of corundum and emery grinding wheels, planer and paper knife grinders, saw filers and gummers, and machinery for corundum grinding and polishing. They showed a new machine for grinding saws of all kinds but particularly adapted for circular saws, claimed to be the only automatic cross-cut filer ever shown at Toronto Exhibition. The Craig Mine crystal corundum wheels and the specimens of crude ore and grain corundums attracted much attention. In addition they showed a new line of heavy grinders for metal work.

The Goldie & McCulloch Company, of Galt, had their usual exhibit of engines and iron and wood-working machinery, including a double surface planer and matcher weighing 11,000 pounds. This machine was fitted with the patented Philbrick matcher heads. Adjoining it stood a four-sided moulder, a power feed cutoff saw and one No. 18 and one No. 9 planer. One of their high speed " Ideal " engines operated the shafting on the south side of the building, and a "Wheelock" engine operated that on the north side.

The exhibit of the A. R. Williams Machinery Company, Toronto, comprised a number of up-to-date wood and iron working machines such as are manufactured by Clark & Demill and McGregor, Gourlay & Company, of Galt, and Major Harper & Son, of Whitby. The latter firm manufacture the " Eclipse" planer and matcher, a large number of which are in use in all parts of Canada. It is especially adapted for cutting small stuff, its construction and operation being such as to produce a perfectly square joint. Major Harper built the first planing machine ever made in Canda. In the A. R. Williams exhibit was also shown a number of circular saws from the factory of the well known firm of the E. R. Burns Saw Company, Toronto.

A large band saw attracted attention to the exhibit of the Bradley, Levy & Weston Machinery Company, Toronto, who are dealers in iron and wood-working machinery, engines, boilers etc. They had also on view mandrils, planers, Crown valves, and an automatic smoke preventer. They handle the "George" lumber registers and the Crowell saw swages.

In the Agricultural Hall were to be seen several wagons from the factory of the Milner Petrolea Wagon Company, of Petrolea, Ont. This firm make a specialty of heavy lumber wagons, sawdust wagons and log trucks, their trade in this line having increased very rapidly within the past year. The Adams Wagon Company, of Brantford, and the Chatham Manufacturing Company, of Chatham, Ont., also exhibited wagons and trucks.

The Queen City Oil Company, of Toronto, had an exhibit in the Manufacturers' Building which was much admired, every product shown being made from crude petroleum. Of great interest to visitors was the Genealogical Tree of Products, the process of manufacture being illustrated by samples of crude oil and comparative quantities of the different products during the process.

In the Manufacturers Building there was one exhibit which particularly interested lumbermen and users of lumber. It was that of the E. D. Albro Company, manufacturers of and dealers in veneers and thin lumber, Cincinnati, Ohio, who exhibited this year for the first time. They showed finished and rough veneers and seventy-five varieties of native and foreign woods, both finished and unfinished. The display of woods was intended solely as an educational exhibit, as the firm do not sell lumber except in veneer form. They manufacture 138 varieties of foreign woods, which are imported in the log, besides handling the native woods of the United States and Canada. Wherever they have exhibited they have always received first prize for their display of finished and rough woods. The exhibit was in charge of Mr. Charles J. Kammer, who looks after their Canadian business.

Near the above exhibit was to be found a small sanding, rubbing and polishing machine exhibited by the Maddox Machine Company, of Jamestown, N.Y. It is intended for the sanding and polishing of wood, brass, metal, etc., and while having the regular hand motion makes 300 strokes a minute and gives an even pressure of 100 pounds. The one shown was a model only, the standard machine being 6 feet long by 4 feet wide and weighing 1400 pounds. It is claimed that it will produce a better finish and do the work of five or six men.

The New Ontario Building attracted many visitors. Upon entering from the south was seen a display of the products of the Algoma Steel Company, of Sault Ste Marie, Ont., including limestone, charcoal, coke, pig iron, and finished rails. Adjoining was the exhibit of the International Lumber Company, of Sault Ste. Marie, made up chiefly of birch and mahogany veneers from one-half inch thick down to the thinnest stock which can be produced. This company make a specialty of birch veneers, single ply and glued panels, having thousands of acres of birch timber to provide the necessary raw material. They claim that their veneer mill is adequate to supply the entire Canadian market.

The Canada Corundum Company had a striking exhibit of Craig Mine crystal corundum grains showing the different sizes from 200 to 14, also the finished wheels made from Craig Mine corundum.

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. IX. TORONTO, CANADA, SEPTEMBER 30, 1903 No. 35

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

FOR SALE—IN ALGOMA DISTRICT, A SAW Mill, nearly new, capacity 30 M feet per day, together with five million feet of timber; Birch, Maple, Oak, Pine and Hemlock. Rail or water shipment. J. J. HUSTON, Thessalon, Ont.

TIMBER LIMIT FOR SALE

ONE HUNDRED AND FIFTY MILLION feet of good sound healthy timber. About 10 million white pine, 80 million cedar; balance hemlock. For particulars apply to P. J. GALLAGHER, Rossbery, B. C.

CURRENT TRADE CONDITIONS.

ONTARIO.

The lumber business has felt the impetus of fine weather, and September closes with a very satisfactory volume of trade to its credit. The incoming month is expected to develop an increase in retail orders, as many yards are thought to be carrying light stocks. While higher prices for lumber are not anticipated, the opinion is becoming more general that there is not likely to be any material decline. It is not unusual to meet a person who predicts an early break in prices, but it is difficult to point to one manufacturer who is shading quotations. One of the strongest factors in the situation is the very light stock of unsold lumber in the mill yards. Even a moderate demand during the next six months will leave the supply of dry stock comparatively limited, and the mills will resume operations next spring under favorable conditions. Building operations throughout the province are active for this season of the year. The number of permits taken out in the city of Toronto this fall would almost indicate a boom, but it is safe to say that, with favorable labor conditions, the activity next year will be no less pronounced. The demand for houses is in excess of the supply, showing that the building movement is based on a sound foundation.

The furniture and implement factories continue to be large buyers of hardwood lumber. The seller invariably makes the price, and if his lumber is of the quality required by the prospective purchaser, a deal usually results. Shingles seem to be in a less satisfactory condition. From some districts the report is heard that prices are a trifle easier and the demand none too brisk.

QUEBEC AND NEW BRUNSWICK.

Spruce lumber has seldom been in a stronger position than it is to-day. Many

mills in Quebec and New Brunswick will be compelled to shut down at an early date on account of log shortage, and as the bulk of the lumber manufactured this season has already been placed under contract there is little danger of a decline in prices. The New York market is taking large quantities of lumber and lath. The high price of $14.50 per thousand was recently paid for medium-sized spruce logs. This figure will compel the manufacturer to obtain a fancy price for his lumber in order to make a profit on the transaction. The manufacturers of pulp have this year been keen competitors in the log market and have no doubt been responsible for forcing prices to a higher basis than seems actually warranted by the demand for either pulp or lumber.

There is a little more life to the shingle market, but prices are not improved. Very few sales of extras for Boston delivery have been made at $3.50, and it is probably within the mark to say that the range of sales is from $3.35 to $3.45.

MANITOBA AND BRITISH COLUMBIA.

The lumber situation in Manitoba and the Territories is said to be a little easier. The United States manufacturers have resorted to price-cutting, which has unsettled the market. The demand, however, shows no falling off, but is expected to expand during the next month. The British Columbia mills are experiencing an active local trade, building operations in Vancouver and Victoria being on a large scale. Shingles are still a drug on the market. At a meeting of the manufacturers held last week it was decided to again commence sawing shingles for the Canadian market. The shut-down has relieved the situation to some extent, but the over-production is still apparent.

During the month of August 177 timber licenses were issued by the British Columbia Government, 45 of these being renewals. The business is evidently once more becoming active, after a period of depression.

UNITED STATES.

Fears regarding the failure of the wheat, corn and cotton crops have been dispelled, and business conditions have improved to that extent. The decline in the prices of iron and steel, however, is taken to indicate a falling off in the demand, and as these commodities are looked upon as a fair barometer of trade, it is predicted by some that the general business of the country will experience a gradual restriction. This is not yet in evidence in lumber circles. The demand is steady and prices on the whole have been well maintained. In some sections a reduction in the price of certain kinds of lumber has been made; inothers a corresponding advance has taken place. The great activity which prevails throughout the box trade is one of the most favorable features. Throughout the Eastern States the demand for boxes is as great as ever known in the past. The scarcity of box lumber has become acute and has done a great deal towards strengthening the entire list. The fact that the Standard Oil Company have recently bought box lumber quite heavily is regarded as an indication that that corporation do not anticipate lower prices in the near future. Norway pine is also comparatively scarce and is being replaced to some extent by hemlock and yellow pine. The upper grades of white pine are irregular in price, certain dealers carrying a fair stock having in isolated cases resorted to the policy of shading prices in order to close sales. For inch No. 1 cuts the price at Buffalo is about $40. The hemlock market is steady at about the prices that have ruled for the past month. The hardwood industry is in a most satisfactory condition. Opinions seem to favor a brisk demand throughout the fall and winter months. It is predicted that before spring the price of oak will have advanced $5 per thousand, notwithstanding that for some time past almost incredible prices have been received for quarter-sawed stock. Maple, basswood and elm are among the best sellers of the lower-priced woods.

GREAT BRITAIN.

So many conflicting opinions are expressed regarding the British lumber market that it is most difficult to arrive at a conclusion as to the existing conditions and future course of prices. Representatives of shippers do not appear to be offering stock at any concession, while importers show little willingness to buy on account of the disparity which exists between the prices asked by shippers and those which can be obtained from dealers and consumers. Baltic deals are said to be somewhat lower in price, and it would probably be a mistake to become too sanguine as to the maintenance of present prices. Should consignment cargoes arrive this fall in any quantity the effect upon values might be serious. The building trade is accountable in a large measure for the present accumulation of stock in the hands of dealers, unfavorable weather having greatly interfered with outdoor work. Third and fourth quality pine deals are reported to be slightly easier, but the better qualities continue firm. The quantity of spruce deals arriving at the British ports is comparatively small, which has done much to sustain the market. A cargo was recently sold for delivery on the west coast of England at a price which is described as an exceedingly good one.

Sellers are already sounding the market in respect to next year's prices, although mo contracts are likely to be closed until the financial situation becomes improved, unless, of course, shippers should make some tempting offers. This they are not likely to do in the immediate future, as we are told that they are talking of higher prices for next year.

STOCKS AND PRICES.

The steamer Sardhana is loading deals at Montreal for Australia.

The Rathbun Company have a drive of 90,000 logs nearing Deseronto. They were cut in McClintock township, Haliburton county.

W. McPherson, of Menominee, Mich., who bought two million feet of white pine in the Georgian Bay district, is having the stock shipped to Marinette, Wis.

The Standard Oil Company last week purchased three million feet of No. 2 and 3 10-inch pine lumber at Duluth. It is to be shipped east for box-making.

The schooner J. V. Taylor cleared from Menominee, Mich., on September 27th, with some 300,000 feet of lumber for Dresden, Ont., shipped by the Ludington Lumber Company. This is the first cargo of lumber ever shipped from Menominee to a Canadian port.

In the Saginaw valley 16-inch cedar shingles are quoted at $2.25 to $2.40, and 18-inch at $2.25 and $3.25. At Tonawanda white pine extra clears are selling at $3.50, a decrease of 25 cents from the figures quoted one month ago.

The New Brunswick Government will offer for sale at Fredericton on October 7th three square miles of timber limits on the east branch of the Sabbies River and Salmon Brook, and two square miles at the head of Pleasant Brook, a branch of the Gaspereau River. The respective applicants are J. H. Barry and the King Lumber Company.

Following is a comparative statement of timber, etc., measured and culled at Quebec up to September 29th as furnished by the Supervisor of Cullers:—

	1901	1902	1903
Waney White Pine..	1,353,666	1,815,920	1,618,920
White Pine	558,995	383,600	390,720
Red Pine	89,761	71, 60	56,520
Oak	485,80	618,680	835,020
Elm	942,372	561,880	417,880
Ash	135,108	79,920	57,200
Basswood	464	.....	160
Butternut	944	.....	.....
Tamarac	198	.....	40
Birch and Maple	307,039	164,800	196,760

The last circular of Messrs. Churchill & Sim, London, England, says: "The importation of both pine and spruce deals has been most moderate, and this has checked the tendency to weakness which was observable in this market in July. For pine there may be said to be no appreciable change in quotations during the month, but for spruce there has been some recovery in the demand, and prices have moved a point in advance. For all Canadian hardwoods and for white pine timber the London market has been almost at a stand-still, and prices have sagged accordingly.

Messrs. S. P. Musson, Son & Company, in their last report, refer to the lumber market as follows: "The only arrival to report is the 'Corona' from Shelburne, N.S., with about 82,000 feet of white pine. Of this we placed 15,000 feet of the deck load, almost all second quality, at $24.39, and 17,000 feet of the balance of deck load, which was rather better, at $25.87 as it run. Of the 50,000 feet under deck, we sold 30,000 feet at $27.43 and the balance at $27 as it run. There has been no arrival of spruce and the demand for crop requirements will soon set in; the high prices of white pine should enhance value of spruce, and we anticipate full rates later on, and think shippers can safely take chance of market. No further arrivals of shingles have taken place and stocks are light, but we understand that about 1,500,000 cedar laying have been placed to arrive at $2.30.

The reports of the secretaries of the Mississippi valley and the Wisconsin valley associations for the month of August have recently been issued. For both sections they show a falling off in the volume of lumber business as compared with the same month of last year. The decrease is small, however, and does not wipe out the balance on the other side of the books, made by the shipments of the previous months of the year. The shipments of the Wisconsin valley manufacturers show a falling off as compared with the corresponding eight months of 1902, but the increase in the volume of trade of the Mississippi valley manufactures is great enough to give a net increase for the two sections combined. August was a trying month. In all of the territory where white pine finds its best customers, it was the month when business affairs were unsettled by the uncertainty as to the crops. The harvesting of the small grains was about over, but threshing had not been completed and the actual yield was not known.

Rewa, for City Island, 199,695 ft. deals, 200,000 cedar shingles.

THE BOSTON MARKET.

There continues to be an improved tone in the market for spruce lumber at Boston. Prices are not vet advanced, but there is more disposition to scrutinize schedules, and to refuse to bid on those at all difficult to fill. Logs on the Kennebec river are now selling at $14.50 per 1000 feet for medium size spruce, in the booms, which is said to be the highest price ever paid on that river, although the big spruce of the Penobscot have sold at $15 to $17 at Bangor lately. Here the quotations on lumber are: Ten and 12 in dimensions, $21; 9 in. and under, $19; 12 in. random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7 and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9 in. and under, 10 feet and up, $18 to $18.50; 5 in. and up, merchantable boards, $17; matched boards, $18 50 to $20; out spruce boards, $13 to $14; bundle furring, $17.

Hemlock lumber is steadv and unchanged: Boards, 12, 14 and 16 feet stock, $15; random eastern, $13.50 to $14.50; Pennsylvania, No. 1, $18.50 to $19.50; No. 2, $15 to $16.50.

Western pine lumber is very quiet, but prices are firmly held at full quotations: Uppers, 1 to 2 in. $84 to $87; 2½ to 3 in. $92 to $97; 4-in. $96 to $100; selects, 1-in. $76; 1¼ to 1¾ in. $76 to $78; 2-in. $78; 2 1-2 to 3 in. $84; 4-in. $86; fine common, 1-in. $67; 1¼ to 1½ in. $69; 2-in. $72; 2½ to 3 in. $80; 4-in. $82; barn boards, $23 to $33; coffin boards, $28 to $32.

There is a moderate demand for hard woods, especially for finish work. Prices are steady and unchanged: Quartered oak, $75 to $83; plain oak, $42 to $45; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $51 to $53; sap, $43 to $48; common, $38 to $45; brown ash, $41 to $44; white ash, $43 to $46; maple, $33 to $37; end dried white maple, $46; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; northern elm, $29 to $31 Michigan elm, $34 to $37.

Clapboards are steadv and unchanged: Extra, $45; clear, $43; second clear, $40; extra No. 1, $30.

Shingles are steadv and unchanged: Extra cedar, $3.35 to $3.45; clear, $2.00 to $3; second clear, $2.25 to $2.40; extra No. 1, $1.50 to $1.75.

Laths are firm with sales being made at full quotations: One and five-eighths in., $3.30 to $3.40; 1½-in., $3.15 to $3.25.

FIRES.

The shingle mill at McArthur's Mills, Ont., owned by John Mather and James Casselman, was burned a few days ago.

Fire at Lion's Head, Ont., on September 26th completely destroyed the saw mill of Pedwell & Company. The loss is $7,000, but there is an insurance of $2,000.

BUSINESS NOTES.

Miller & McPherson, sash and door manufacturers, Russell, Ont., have dissolved. W. C. Miller continuing.

A. Lajoie, general store and lumber, L'Asne Au Foin, Que., is announced to have assigned to V. E. Paradis.

L. H. Swan & Company have leased the docks at Tonawanda, N. Y., formerly used by the defunct Muskoka Lumber Company.

McLeod & Atkinson, general store and lumber, Kouchibouguac, N.B., are said to be offering to compromise at 33¼ cents on the dollar.

The Buffalo Box Factory has been incorporated at Buffalo, N. Y., with a capital stock of $125,000. The directors are James Fenton, S. E. Scroll, H. F. Sickler, J. B. Fenton and R. L. Newell.

The Canada Lumberman
TORONTO, ONT.

SHIPPING MATTERS.

The steamer Laura has been fixed to load deals at Halifax, N. S., for the west coast of England at 35 shillings, and the schooner Canada has been chartered to carry lumber from St. John to Grenada. The steamer Ida sailed from Halifax last week for Cardiff, with deals.

The announcement comes from Montreal that the Canadian Railways will on October 1st make an advance of 20 cents per thousand feet on seasoned soft wood lumber destined for New York by rail and water over the barge route on the Hudson river.

There has been a rise in freight rates during the past month. The demand for vessels does not seem to have increased but owners are evidently greatly dissatisfied with the returns which have been received during the past season, and it is not improbable that a further advance in rates will take place.

TIMBER LIMIT TRANSACTIONS.

The timber areas in the vicinity of Botwoodville, Nfld., owned by C. T. Hillson, of Amherst, N. S., are reported to have been sold to Baker & Company, of Boston, for $250,000.

The British American Land Company, of Sherbrooke, Que., are offering for sale 1,792 acres of timber lands in the township of Dudswell and 1,400 acres in the township of Stoke.

A syndicate of American capitalists has purchased about 300 square miles of timber land on Bay de Chaleur and is building a large saw mill at Restigouche, Que. The American stockholders include F. S. Farr, of Minneapolis; W. A. Taft and Frank J. Saxe, of New York city, and James E. Marrett, of Portland, Me.

We are in the Market for :—

Rock Maple logs and planks
Rock Elm Logs
Waney Birch Logs
White Oak Logs
Oak planks, best quality, in long lengths
White Ash planks, best quality, in long lengths

HOO-HOO ANNUAL.

At the ninth second of the ninth minute of the ninth hour of the ninth day of the ninth month of the year A.D. 1903, in the city of Buffalo, the twelfth annual Hoo-Hoo concatenation was declared open. The members of the local committees had distinguished themselves in providing for the entertainment of the Hoo-Hoo brethren, and the fine weather which Nature provided left nothing more to be hoped for. The large club room of the Genesee Hotel was taxed to its utmost to accommodate the large number present. Addresses were delivered by members of the city council warmly welcoming the visitors.

The Snark of the Universe, W.H. Norris, in his annual report, made several important recommendations for the benefit of the Order, one of which was the appointment of another salaried officer to devote his time to travelling about the country and aiding vice-gerents in their work.

Some interesting facts were brought out by the report of the scrivenotor. There had been held during the year 109 concatenations, with an aggregate enrollment of 1721 regular, one honorary and eight life members. A statement of initiates for each year in the Order's history showed that in 1892 fifteen members were initiated, and in 1902 1,131 members. There had been very few resignations and comparatively few members expelled, the total membership at the present time being approximately 8,400.

The next annual will be held in the World's Fair City of St. Louis. An invitation for 1905 was received from Portland, Oregon.

Three candidates were placed in nomination for the office of Snark of the Universe, Edward M. Vietmeier, of Pittsburg, being elected on the first ballot. The other officers chosen were: Senior Hoo-Hoo, Frank N. Snell, Milwaukee, Wis.; Junior Hoo-Hoo, John S. Bonner, Houston, Tex.; Bojum, Charles D. Rourke, Petersburg, Ill.; Scrivenoter, James H. Baird, Nashville, Tenn.; Jabberwock, Karl Isburgh, Boston, Mass.; Arcanoper, John F. Feist, Buffalo, N.Y.; Custocatian, J. E. Fitzwilson, Columbia, S. C.; Gurdon, James A. Clock, Portland, Ore.

The Canadian contingent included James Innes, Chatham, Ont.; R. W. Douglas, Montreal; W. A. Laidlaw, J. G. Cane, S. R. Higgins, W. J. MacBeth, H. P. Hubbard, F. C. Boak, William Hogg, Gilbert S. Lay, and P. J. Edwards, Toronto.

CONCATENATION AT TORONTO.

The Toronto Hoo-Hoo lay dormant since August 7th. It was planned to arouse him for a few manoeuvres in the "Onion Bed," and the date of August 28th was named. Difficulties arose about getting Toronto Hoo-Hoo and candidates together, so the proposed concatenation was deferred, and the Great Black Cat slumbered on.

Saturday evening an awful caterwaul went up from the Toronto Hoo-Hoo. At 9.09 o'clock the "Onion Bed" bloomed in sudden and fascinating fragrance. Six candidates were coralled, and the "Gardens" were shown to them. They breathed heavily into the "Lungtester," and labored well in convincing the doubting Snark of their fitness to walk in the "Light" — pressed lips burning with promises to the Great Book there unsealed to their adoring gaze, and later discussed it all over a collation which satisfied the inner man.

The officers: H. P. Hubbard, Snark; S. R. Higgins, Junior Hoo-Hoo; A. R. Riches, Senior Hoo-Hoo; W. J. Hetherington, Bojum; W. C. Laidlaw, Scrivenoter; Hugh "Slab-slasher" Munro, Jabberwock; W. J. MacBeth, Costocatian; Geo. M. Nickels, Arcanoper; Richard Locke, Gurdon.

The candidates: A. J. McFayden, Bracebridge; N. V. Kuhlman, Jas. G. Cane, A. "Lathyarn" Eckhart, P. J. Edwards, F. C. Boake, Toronto.

THE EXPORT LUMBER TRADE OF BRITISH COLUMBIA.

At the annual meeting of the Pacific Coast Lumber Manufacturers' Association, held at Tacoma, Wash., on August 22nd, an interesting address was delivered by Mr. R. H. Alexander, of Vancouver, B.C., who reviewed in an able manner the conditions governing the lumber trade of British Columbia. Mr. Alexander's remarks were as follows :

"When we get together we realize that there are troubles other than our own and I think the mere fact that the other fellow—who has been selling our customer lumber—has troubles of his own, in some subtle manner reconciles us to ours.

"When the formation of the Pacific Lumber Manufacturers' Association was first proposed I was not very much impressed with it, as I did not see in exactly what way we would be interested. Since its organization, however, I have been enlightened. In the first place we have our indefatigable secretary, Mr. Beckman, and all of our members know how he has helped us by compiling statistics and getting up price lists and furnishing us with information that we could get in no other way. It was only a short time after our organization that it appeared to several of us on the coast that through this association work could be done and something accomplished that had not been accomplished in all the years that we had heretofore been at work. Scheme after scheme had been tried with reference to the cargo business and after a very short time every one of them collapsed. It was only after the formation of this association at Seattle that some means could be devised to get the export mills into line and get them into the association, as well as those mills catering to the local and rail trade, but that has been done and has worked well, and while all these other schemes which generally originated with what had formerly been the headquarters of the export trade failed, the work put on foot three years ago by the founders of this association has proved a success—not only in the foreign trade, but I think the same can be said with reference to the local and rail trade, though perhaps the improvements have not been so marked.

"Before the association was formed everyone was working in a haphazard manner. Now, since the manufacturers have changed their views, wonderful changes have been made. The price list alone would show that. I can remember when everything in piece lumber from a 1 x 12 to a 24 x 24-40 feet was sold at the same price. By bringing the manufacturers together in this association the price list has been worked up which sets the price of the different sizes of dimension lumber at a figure commensurate with the relative cost of manufacturing it. I think in that line a wonderful advance has been made that has resulted in a great amount of good and profit to the manufacturer. The price list we have is the result of a tremendous amount of work on the part of those who have been instrumental in making it, and we now have something like a rational price on our product.

"At the commencement of the year we took up the department of inspection referred to, and I am glad to say as one of the committee that it has met so far with gratifying results. Now, when a purchaser has been in the habit of buying a cargo and being able to grade it when it arrived, the man who sells it is going to have very little chance. At the same time the purchaser is not going to give up his former privilege in this matter without a struggle, and in consequence we must expect that there is going to be a certain amount of kicking before he takes the inspection of some one else, where before he had the whole say himself. So far, we have met with success. There have been fewer complaints with reference to the grade of lumber than there were formerly, and if there is a complaint you know that there must be something very queer about it, and it gives the mill shipping the lumber a chance to examine into the matter carefully.

"I trust that our inspection system will grow to the dimensions of that of the Yellow Pine Association, and I think by persistent effort we can make our inspection the standard. Work that has been done has shown the wonderful progress that has been made along these lines, and we are now inspecting practically all of our cargo business and our inspection is being recognized in most of the markets to which we ship.

"Referring to the statistics which were read by Mr. Griggs and prepared by Mr. Ames, there was one part that appealed to me especially and which was decidedly true, I am sorry to confess, and that was, that he could not get reliable information about the shipments. The trouble in British Columbia is that we are so far apart, some on the coast and some on the mountains. There is very little intercourse between the two and it is hard to get information that can be depended upon. As far as we can make out we have an annual capacity in British Columbia somewhere between 525,000,000 and 550,000,000 feet, and yet our shipments show only 275,000,000 to 300,000,000 feet. You see, therefore, there is much unused capacity there and the problem is what to do with the capacity. If hard times come, and there is a question that prices are not going to be so good as lately, I think the members of this association should recognize their friends and not bring the association into disrepute and possibly cause a great falling off in the price and make it difficult to get good prices. We certainly have to face the question that the mere fact of selling a little below the price will not increase the total consumption, and it merely means that A is taking such means to secure some of the business that was being done by B, and when B finds it out he puts his price below that laid by C, and C comes back at A and so it goes on and no one is the better for it.

"I think the manufacturers on the Pacific coast do not realize now that there is a value in standing timber which a few years ago was not thought of. The only question a short time ago was to manufacture as fast as you could get it into timber and you were all right. The manufacturers are now getting the capacity so far ahead of the consumption that the consumers are unable to take what is offered, and the thing to do is to curtail the output and wait until the markets revive. There is no sense in giving away the wealth of our timber or in cutting it up and selling it and not making any money. If we can enlarge our territory by getting lower rates from the railroad so we can increase the consumption in that way, or if we can get lower rates on the common classes of lumber produced on this coast and can market it in localities from which we are excluded at present, I do not think there is any need for a decreased production. The great difficulty is that the heavy demand to the east of us is for the higher grades of lumber. We all know that we manufacture a good deal more of the common than we do of the higher grades and the problem is being continually forced upon us as to what will become of the rough lumber.

"The foreign business is restricted. It is true that it has increased but it has not kept pace with the increased capacity of the mills. In some countries you will find a gratifying increase in the records for this year, but if you look back you will find that the same country for the year before and probably two years before has taken very little from us and the increase for the one year is simply taking what they did not buy before. In Australia, which is one of our heaviest customers, the trade fell off something like 40 per cent. during last year. Of course that was on account of the hard times and next year Australia can show a gratifying increase ; but it is not an increase on the whole, but merely evening up the trade with that country. Our great distance from many of the markets operates against us and it is difficult to send our lumber to those markets in time to satisfy the requirements of the dealers. They can get it from much nearer sources and they do not care to wait six months or a year for us to fill their orders. Our business has developed and our markets have broadened, but it has been a slow development and in the meantime the mills are increasing their capacity and there must be an outlet for their product.

"In reference to this I would like to say that I think there should be some respect shown for each other's territory. We are meeting severe competition from mills in this state that are sending lumber into Manitoba. The difficulty with us is the same as that with the mills located here. We have more common lumber than we can readily sell, and if you do send your lumber up there, we are both members of the same association, and I think we should respect each other's locality.

"They can take their share of it, but if they do, they should sell it on the same terms and at the same price that it is sold by the Canadian lumbermen.

"I am sorry that I cannot give you better statistics and more information in regard to the output of British Columbia mills, because it is just as I have stated."

"How to Measure up Wood-Work for Buildings" is the title of a book by Owen B. Maginnis, of New York, the price of which is 50 cents. It describes the simplest and most accurate methods to be followed when figuring up the wood required for either brick or frame houses, and is thoroughly illustrated. The publishers are the Industrial Publication Company, New York.

A TRIP TO THE MARITIME PROVINCES.

[BY OUR TRAVELLING REPRESENTATIVE.]

No person in Ontario can get a conception of the vast extent of our Dominion unless he makes two journeys. To go either to the Pacific coast or to the Atlantic coast is looked upon as quite a trip.

When I packed my grips at Toronto in August I had a run of 1175 miles to reach Halifax via the Intercolonial. But the actual fact was that I put in nearly two thousand miles of travel, with side journeys, before I reached the sea.

The trip from Toronto to Quebec was uneventful. At the Ancient Capital I had the pleasure of meeting several of the best known lumbermen, amongst whom were Dobell, Beckett & Company, Goodday & Company, Carbray, Routh & Company, Sharples & Company, Calvin Company, the McArthur Export Company, and J. J. Murphy. Other offices at which I called showed that many had not returned from their summer holiday. The timber industry is a real live one at Quebec. Whilst not so many ships loading as in former years, there is a steady demand and a steady export.

Whilst at the Capital I had the pleasure of visiting the British cruiser "Ariadne," the German cruiser "Gazelle," and the French man-of-war "Tage." These warships carried considerable quantities of lumber and timber for their own use. I noticed it was nearly all South American teak or British oak.

At Bathurst, on the Baie des Chaleurs, I found over one hundred men thrown out of employment by the collapse of the foundation under the engine in Sumner's big saw mill. The foundation sinking caused the accident which closed the mill for a week or more.

A pleasant run brought me to Newcastle, on the Miramichi river. All the saw mills were running full blast and a big cut is promised for this season.

Considerable talk was going on at this point over the big deals made by American capitalists. Mr. E. H. Sinclair, representing the late Edward Sinclair, is reported to have disposed of the Sinclair limits in Northumberland county, along with all the mills, tow boats and plant, for a sum of $400,000. The Sinclair property covers over 150,000 acres, with large lumber privileges. The Americans propose to increase the output of deals and improve the plant.

I was informed that a considerable quantity of logs was still "hung up" on the upper reaches of the Miramichi.

Chatham, N.B., appears to be dead as regards progression in the lumber line. The pulp mill has closed down, but the one across the river is running. The town possesses a very progressive firm in the Ruddock Bros., proprietors of the Miramichi Foundry, manufacturers of saw mill machinery. Their specialty is a compound saw edger. Their 4-saw edger is used very extensively in the Maritime provinces, and, in fact, exclusively in many mills. The ease with which saws are changed, the freedom from getting out of gear and the ease of running the machine, are features that commend themselves to those who desire the best that the market affords. Taking a walk through the extensive works of this company I saw a busy scene, and I predict for the new company just being formed a successful career in the line of manufacturing mill machinery.

At Richibucto J. & T. Jardine's new band saw mill was nearly completed and they expected to have it in operation by the 15th of September. This mill is much larger and better than the one destroyed by fire last fall. The latest improved machinery installed makes it one of the finest mills in the province.

The Miramichi river and valley has always been a great lumber centre, and there is talk of a deal being arranged with capitalists to take over the mills and lumber lands of the Richards Company at Boiestown, Campbellton and Chatham. There is, however, talk of contesting the will of the late Wm. Richards and this will set back the negotiations, it is feared.

At Moncton, the Intercolonial workshops use up an immense quantity of lumber each year. Moncton is getting quite a bustling town, the chief attraction for visitors being the phenomena of a tidal wave, coming in twice a day from the Bay of Fundy, and locally called "the bore." As I stood on the quay and watched this wonderful sight I could well understand why tourists came thousands of miles to see it.

A run of ninety miles brought me to St. John, N.B., the natural winter port of Canada. Whilst there I saw vessels chartered to carry lumber to Buenos Ayres in South America at $7 per thousand, whilst the rate to Bermuda was $9.

Considerable diversion of opinion exists all through the Maritime provinces as to the advantage to be gained by the new Grand Trunk Pacific route. Mr. T. Lynch, the well-known lumber operator, said that if it came by the route that was partially surveyed some eight years ago it would run right through the field of his lumbering operations, but he does not want the railway through there. Unless some new plan is discovered, sparks from locomotives will burn up the forest. Another operator told me that a route through the woods is practicable, and would work up some traffic in lumber.

In St. John I also visited the Howe Woodworking Company, who make a specialty of mantels and fine interior finish; the Campbell Bros. axe factory, well and favorably known throughout the province; the Christie Woodworking Company; Jas. A. Likely, timber dealer;

MR. ALEX. GIBSON,
Lumber King of the Nashwaak, Marysville, N. B.

Emerson & Fisher, and a number of others interested in the mill trade.

The lumber and timber trade at St. John is quite brisk, and being a seaport, naturally there is considerable export business done. The St. John Sulphite Company were asking for pulp wood and under-sized saw-logs such as batting and spiling.

There are considerable quantities of logs still "hung up" on the Miramichi, St. John, Oromocto and Nashwaak rivers. Seeing is believing, and I personally saw in many places the logs on the banks—high and dry. The "sweepers" are waiting for a rise so they can clear the logs off the shoals and banks.

I had the pleasure of meeting many at Fredericton who are in close touch with lumbering, amongst others being Mr. R. A. Estey, the genial proprietor of the West End Mills. His cut this season will run over five million feet. Whilst I was there, Mr. Fred Estey left with a large crew of men and some horses for the woods to make preparations for the next season's lumber cut. Mr. Jas. H. Crockett, the obliging editor and manager of the Fredericton Daily Gleaner, gave me much information regarding past, present and future conditions of the New Brunswick lumber trade, upon which he is well posted.

Mr. Geo. W. O'Neill, the manager of the J. C Risteen Company, Limited, told me that every year sees an increasing quantity of other lumber substituting pine. The Risteen Company are doing a big business in interior fittings, furniture, etc.

The well-known machinery firm of McFarlane, Thompson & Anderson are still doing a rushing business, being one of the best known firms among the mill men throughout the Maritime provinces.

John Palmer & Company continue to manufacture and supply for lumber camp use a special line of larrigans and other footwear for which this company's "Moose Head" brand is famous.

If St. John is on hills and tiresome travelling on foot, Fredericton is on the "flats" and looked very pretty in August. Near the city is the renowned Fort Nashwaak, the headquarters of Acadia in 1696. Oromocto was formerly ship-building headquarters, but this industry has to a large extent moved down and even out of the river.

Whilst standing on the bridge at Fredericton I saw the side-wheeler "Hero" tow under a large pine timber raft. I counted 112 cribs, four abreast. This timber, from the upper St. John waters, was composed of small and large sticks, but the majority would not be over 12 inches in diameter.

The local lumbermen told me that men for the woods are now in large demand, the wages good, and prospective cut large. The demand for labor will be keen, as there are several large tracts of partially burned timber land which must be cut this year.

R. Aitken & Son, Donald Fraser & Sons, and John Lynch have already sent up several large gangs to the woods. Mr. Lynch had just returned from a cruising trip on the headwaters of the Miramichi. He said that the majority of men were not anxious to go into the woods so early in the year. The Aitken firm had a large crew at the headwaters waiting for a rise of water so they might be able to bring out their drive which was hung up since spring.

The Aberdeen Mills at Fredericton, under the management of Mr. Donald Fraser, are running full time. Mr. Murray McGuire, formerly of this mill, has left for Portland, Oregon, to manage a mill there for another company. Others I heard were also about to leave for the west. Mr. David Monahan, formerly with the Gibson Company's saw mill at Blackville, N.B., has accepted the position of manager in the Rat Portage Lumber Company's mill at Vancouver.

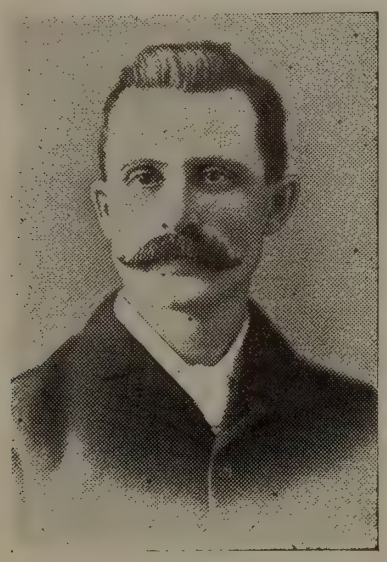
Jas. M. Scott, of Dumfries, W. J. Scott, owner of the Springhill mill, and Ald. John S. Scott, of Fredericton, have purchased what is known as the Victoria mill property, Fredericton, formerly owned and operated by the firm of Hale & Murchie and more recently by John R. McConnell, of Marysville. The property is a very valuable one, comprising a large and well-equipped saw mill, with good shipping facilities, wharves with good depth of water, and also a siding from the C.P.R. Besides the mill there are thirteen dwelling houses on the property, and there is also a large and valuable farm of 160 acres. It is understood that the price paid for the property was considerably under $10,000. The mill, which has been standing idle this summer, owing to the fact that Mr. McConnell did not get his drive out last spring, will not be operated the remainder of the season, but will be started full blast next spring. All the interests of the firm of Hale & Murchie were also secured. The deeds of the property were filed and possession taken on September 1st.

Scott Bros. intend erecting a large rotary saw mill at Sand Cove, on the Magaguadavic Lake, which it is expected to have ready for sawing operations next spring. Here also are good shipping facilities, as the mill is on the line of the Canadian Pacific. This firm is going into the lumber business on a very large scale and with these two mills, in addition to their industry at Spring hill, all in operation next year, they will have an important position in the lumber industry of the province.

Just outside the city of Fredericton is Marysville, called "the Industrial Hub of the Province." Here is the home of the man who established the town, Mr. Alexander Gibson, millionaire and lumberman, president of the Alex. Gibson Lumber, Railway & Manufacturing Company. He is widely known as "the Lumber King of the Nashwaak." His ambition is to see Marysville with a population of ten thousand before he dies. He is the principal owner of the Canada Eastern Railway, 132 miles in length, and has great interests

in the cotton mills of Marysville, which industry he first started.

At St. Mary's, in York County, N.B., is the large factory of the McFarlane-Neill Manufacturing Company. This company is wide-awake and progressive, having one of the largest up-to-date plants on this continent for the manufacture of cant-dogs, peavies, etc. The works are beautifully situated, overlooking the St. John river. The president of the company is Mr. Jas. S. Neill, who has associated with him an energetic general manager, Mr. M. A. Tweeddale. The high standing of



JAS. S. HENDERSON, Parrsboro, N. S.,
Inventor of the Improved Lumberman's Larrigan.

this company is a guarantee that their business transactions are satisfactory. In showing me through the extensive works the manager said that half a million feet of the best rock maple was used in the making of peavies alone each year. Steam is the motive power used to run the machinery and the fuel is entirely shavings from the workshops. Amongst the new machinery recently installed in this plant I noticed Wright's band saws, Perkins' hot presses, Beecher & Peck's drop hammers, etc. All the tools are made from the best drop forgings. On the premises is a new dry house to hold 30,000 handles; 100,000 handles are constantly kept in stock, being thoroughly seasoned before being sent out. The timber used is got within twenty-five miles of the place. The socket for the peavey is a patent forged steel one used exclusively by this firm. The cast steel used is from Johnstown, Pa. This company make peavies from 2 feet to 7 feet in length and ship to all points in Canada, as well as to the United States. As they have never been able to supply the demand heretofore, the company intend to run a whole year on the manufacture of peavies alone. The electric light is generated by their own dynamo on the premises. There is also an available water supply brought from an artesian well situated on a mountain a mile away. As a temperance man I like water and after sampling the article here I pronounce it a particularly fine brand. For shipping facilities the company have a railway at their back and the river St. John in the front of their premises, and, as they appear to get the orders, they apparently lack nothing.

Up at Woodstock, N.B., near the Maine frontier, the works of Alex. Dunbar & Sons are situated. They make saw mill machinery of all kinds, including three sizes of rotary saw mills, clapboard sawing machines, clapboard planing and finishing machinery, shingle machines, steam engines, etc. This firm is doing an increased business, not only in the Maritime, but in the upper provinces as well.

Back I went to St. John. Most of the mills on the Bay of Fundy are running at full capacity, and lumber shipments are up to the average. A feature of the business just now is the revival of the South American trade, for which spruce is in demand. I should also mention the shook trade to the Mediterranean and the export of spool wood and deals to England.

Down at the town of St. Andrews, N.B., is situated the headquarters of Wm. A. Holt, well known for the excellence of his brand of shoepacks, larrigans and moccasins. He confines himself exclusively to this line of goods, having an up-to-date tannery and a splendid trade with the lumbermen.

Sackville was my last point of call in N.B. Here I found the Standard Manufacturing Company, who are preparing to enter extensively into the supply of footwear to the lumber camps and jobbing houses. This company have bought out the J. R. Ayer Company and have an efficient manager in Mr. Black.

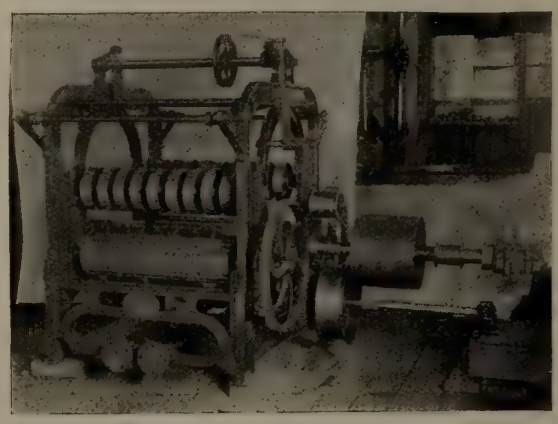
At Amherst, N.S., I called on Rhodes, Curry & Co., who make bank and office fittings and school desks a specialty. This company manufacture nearly all kinds of building materials. In addition to their large stock of native lumber they are now carrying over one million feet of foreign lumber, including oak, walnut, ebony, mahogany, etc. At this lively town is also situated the Robb Engineering Company, who make the Mumford Standard boiler. The works of this company are extensive and the large industry has helped the town grow considerably.

The Amherst Foundry & Heating Company have just got into their magnificent new building and will soon be in shape to take care of all the trade that will no doubt come their way.

I visited the shops of Mr. George M. Doull, who employs quite a number of skilled workmen making interior decorations and office fittings.

At Springhill they tried to induce me to go down and inspect the coal mines, 2870 feet underneath the ground. I declined with thanks—having failed to recognize myself after a similar exploit down a soft coal mine in Michigan.

The Cumberland Coal Company's railway took me down to the pretty little town of Parrsboro, on the Bay of Fundy. Then I made a bee-line across the river to the fine plant of the J. S. Henderson Company, Limited. This plant consists of six buildings employing from 75 to 125 expert workmen, all engaged manufacturing the



COMPOUND 4-SAW EDGER, MANUFACTURED BY THE MIRAMICHI FOUNDRY.

celebrated Henderson larrigan. The company have their own fire department with fire station, engine, hose reels, etc. The company have taken good precautions against another fire, having been burnt out last winter. Four of the buildings are new. Inside everything is beautifully neat and clean, even to the appearance of the workmen. The Maritime province is famous for its larrigans, and Mr. James S. Henderson is now well known as the inventor of the improved lumberman's larrigan. Besides being an expert tanner understanding the chemical curing of hides, he has had twenty years' practical experience as a manufacturer of larrigans. The J. S. Henderson Company have a capital of $75,000—the best men in Parrsboro being at the head of the company. They are building up a magnificent and permanent business.

Across the Bay of Fundy, at Bridgetown, is situated the larrigan factory of McKenzie, Crowe & Company, who cater to the demands of the lumber camp.

A considerable part of the lumber exported from the Maritime Provinces goes out of the Bay of Fundy. While I was there, two Digby vessels loaded with lumber in Annapolis and started on the same day in a race to Buenos Ayres, Argentine Republic.

At Newville, on the Parrsboro River, I noticed a large saw mill which was burning a lot of cuttings, slabs and shavings. These were all run on a conveyer and taken to a stone wall on the side of a hill, over which they were dumped onto a good sized fire. Much of the stuff consumed here could have been sold were it in a city, but the cheapest and quickest method to get rid of it was by means of fire. On the very top of the long mill building I noticed a platform running the whole length of the roof. On this platform were large barrels placed a few feet apart. On inquiry I learned that it was a device intended for fire protection service, the barrels being kept full of water.

A big deal took place at Bridgewater recently. The Davison Lumber Company have sold to an American syndicate their limits, mills, etc. A tramway is to be constructed by the new company, I was told, and timber cut on a large scale.

In Truro there is the Condensed Milk and Canning Company, who do an increasing trade with the lumber camps, particularly in the west. The company are now putting up another plant at Huntingdon, Que., in order to fill their western orders.

Truro is a nice place, with broad level highways, but not much of a lumber centre. I took the Sydney branch of the Intercolonial here and went up to Stellarton and New Glasgow. At none of these points was there anything new to the lumber trade.

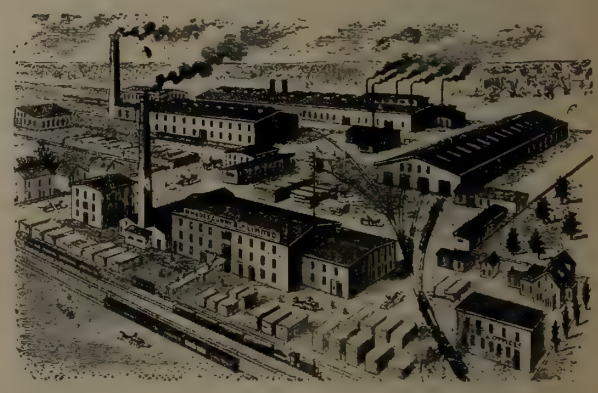
Logan & Company, at Shubenacadie, said the demand for lumber sleds and wagons was on the wane in that section. One of the sights I saw at Shubenacadie was four oxen hauling large sticks of timber up from the river to loading platforms alongside the railway. These oxen belonged to Mr. Henry A. Benjamin, a well-known lumberman, and he said they were worth a dozen horses for pulling large sticks of timber out of a difficult position.

The large saw mill at Dickey's Siding, near Stewiacke, was running full time with a good crop of logs in the pond.

It was a glorious day as our train swung around Bedford Basin, and took us to Halifax. Halifax is the same old place. The citadel is there, with its entrancing view of the harbor; the old town clock, erected by Queen Victoria's father, still indicates the correct time; the military patrol on the streets tell you that Tommy Atkins is "on deck;" and the fleet of war vessels in the harbor flying proudly the Union Jack of old England.

The steamer Viking took a gang of about forty lumbermen from Ship Harbor and Salmon River to the Labrador coast. These men go to the Dickey camps to replace men who have been there and are now returning home. All the gang sign contracts for one year.

While there is very little lumber shipped direct from Halifax, there is quite a lot coming in, principally Southern yellow pine and pitch pine. I saw a cargo that came in from Savannah by the steamship



THE RHODES-CURRY WORKS AT AMHERST, N. S.

"Nyassa." It comprised 12,656 pieces, containing 1,937,790 feet of pitch pine, consigned to McLean, Kennedy & Company.

A number of the Halifax lumbermen complained of the serious effect on business caused by the harvest excursions to the North-west. The Maritime Provinces are being drained of their strongest young men, and this makes the labor question a very serious one. The Rhodes-Curry works at Amherst were twenty-five per cent. short of workmen after the harvest excursions, and it was impossible to fill their places. Other firms with heavy contracts find it now difficult to fill their orders.

At Halifax I met a lumberman from Newfoundland, who said that the export of sawn lumber from the island this season would exceed fifty million feet. The Henry M. Whitney concern, of Boston, will put out about half of this, and will have loaded twenty steamers besides several barques before the latter part of October. Labor is scarce on the island, and it is said that there are fully 2500 men now permanently engaged in lumbering in the colony.

Whilst I was at Chatham, N.B., the Head Line steamship "Teslin Head" put in there from Quebec. She was loaded with a cargo of lumber consigned for the Imperial Government.

An all-night run took me through the Metapedia valley and past the famed summer resorts of Bic, Little Metis, Cacouna, and Riviere de Loup. I arrived at Quebec in time to see the brilliant spectacle of the illumination of the British and French fleets of warships and the departure of the vice-regal party.

One word before I close this trip. The Intercolonial Railway deserve praise for their fine service. The parlor, sleeping, and dining car appointments are perfect—equal to anything I have seen on the biggest U.S. lines. The trainmen are the politest I have ever met, and although the journey is long it is one filled with pleasure, and at times, entrancing beauty.

I arrived in Toronto safely. My mileage book showed 3,127 miles of railway travel and about fifty miles by electric road and boat, an average of about 160 miles for every working day. I was tired out by the rapid journey, but like the Great Sacred Black Cat, "still in the ring."

J.R.H.

DEVELOPMENT OF THE CIRCULAR SAW.

By D. W. Baird.

The publication of some reminiscences of old-time saw mills in a recent issue of the Southern Lumberman served to bring out a great deal of imformation, more or less reliable, in regard to the primintive methods of converting timber into lumber. While the saw was one among the earliest tools to be used, the degree of perfection attained in saws of all description in use at the present time was arrived at by slow process of evolution and progress that extended over many centuries. The first users of the saw doubtless realized at a very early date that its efficiency, that is, the amount of work the tool would perform, depended upon the rate of travel of its cutting edge. This proposition is so apparent that we are forced to assume that even a primitive people possessing sufficient intelligence to pull a saw back and forth would readily catch on to the idea. Starting with this assumption, it is astonishing that it required more than thirty centuries for a people constantly increasing in knowledge of mechanical laws to discover the immense superiority of a rotary over a reciprocating motion when applied to a saw, or to many other cutting tools. A large proportion of mechanical force, or power, expended in operating a reciprocating saw or other machine is absorbed in overcoming the impact. Equally as astonishing are the crude devices resorted to some six or seven decades ago in the effort to produce a circular saw. In this connection we present cuts of two of the earliest forms of the circular saw used in Tennessee that are fairly well authenticated.

Cut No. 1 represents a saw that was operated by one Thomas Scarborough in Bedford

Fig. 1.—The Scarborough Saw of 1840.

county, Tennessee, about the year 1840. It was simply a strip of iron about eight inches wide and probably half an inch in thickness, with steel ends in which the teeth were formed. The hole for the mandrel, or arbor, was square. This saw was used for hewing house logs, cutting floor beams, joists, and squaring timber for various purposes. As no other of its kind has ever been reported it is fair to presume that this saw was not a pronounced success.

Cut No. 2 is from a sketch by John H. Whitson, of Goodrich, Tenn. It represents a saw that was in operation on Hatchie river, West Tennessee, near the line between the counties of Hardin and Hardeman during the last half of the fifth decade of the past century. This saw strongly suggests the circular saw of to-day, but had only four teeth. It was driven

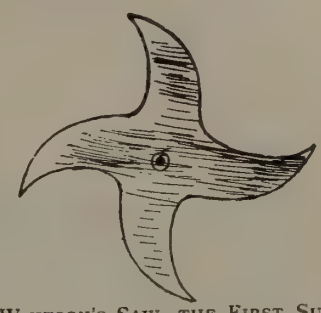


Fig 2.—Whitson's Saw, the First Suggestion of the Circular.

by horse power applied to a draught wheel of the "ground-hog" pattern, except that it was made almost wholly of wood, and was used for cutting pine lumber. Mr. Whitson, who was a half grown boy at the time when he saw it, says that according to his best recollection and belief this saw threw chips fifty feet high.

These two instances will serve to show by what slow process the circular saw of the present was evolved. The step from the circular to the band saw was shorter and more rapid, but still it was brought to its present degree of perfection only through tedious and costly experiments. Few of the present generation realize how much they owe to the patient and slow development of inventive genius among the generations now gone.

WOOD PULP DEPARTMENT

POWER TRANSMISSION PLANT FOR A PULP MILL.

One of the recent accomplishments of the Dodge Manufacturing Company of Toronto, Limited, which is of considerable interest is

SHOWING A PORTION OF POWER TRANSMISSION PLANT INSTALLATION FOR PRICE PORRITT PULP AND PAPER CO., RIMOUSKI, QUE.

the installation of a complete power transmission plant for the Price-Porritt Pulp and Paper Company, of Rimouski, Que., of which we show some pictures herewith.

In designing this new plant the power transmission equipment throughout was specially designed by the Dodge Company and the illustrations we reproduce show how extensive a task the company had to perform.

From the main drive through to the smallest drive to individual machines the Dodge Company furnished the entire equipment, which is of the very latest and approved type made by the Dodge Manufacturing Company.

Shafting, belting, hangers, bearings, couplings, friction clutches, Dodge wood split pulleys, iron pulleys, special castings and everything that was needed to make a perfectly operating transmission plant were designed, built and installed by the Dodge Company, which is daily coming more and more into notice as designers and builders of high-class power transmission appliances and as designers and builders of complete plants.

Col. Mullish, an English millionaire, and J.J. Palmer, of Toronto, recently spent some time in British Columbia in connection with a pulp mill project, the syndicate which they represent having purchased limits in the vicinity of Princess Royal Island. Acting for them, W. A. Bauer, C.E., appointed 32 timber cruisers to inspect the limits, and acting on their report the syndicate are said to have decided to erect pulp and paper mills costing about $1,000,000, to be operated by water power.

THE SOO PULP MILLS.

Mr. Cornelius Shields, President of the Consolidated Lake Superior Company, is reported to have made the following statements regarding the operation of the pulp mills :

"The Sault Ste. Marie Pulp and Paper Co. has been losing money heavily on its pulp. With logs at several dollars per cord below the price other mills are paying and making money, these mills ought to be making good profits. I have hardly been here long enough to get down to the bottom of this matter, but the profitable operation of these plants seems to be wholly a question of management. The losses on the sulphite mill appear to have been due to the attempt to get gas from the roasting of pyrrhotite, which has not yielded enough gas to enable the mill to make more than 18 or 20 tons of pulp per day on a rated capacity of 50 to 60 tons. The substitution of pyrites, or sulphur when pyrites could not be had, has resulted in increasing the output to about 40 tons per day. The fourth dry machine, which has just been installed, completes the equipment of this mill as planned. The ground wood mill has lost much time on account of shortage of logs, which should have been provided against. The operation of the mill seems to have been unnecessarily expensive, and the cost of pulp has therefore been too high. Both the ground wood and sulphite mills have been gradually reducing their costs until they are now about equal to the prices obtained for the pulp. Still further reductions must be made and no doubt can be made. The price f pulp is advancing, and as the output has been sold a long way ahead, there is a chance to turn the past losses into a good profit. It is hard to tell what these mills ought to return, but I should say that both of them ought to show not less than $75,000 for next year. Either of them ought to make more than that if the costs can be brought down where they should be."

The St. George Pulp & Paper Company, of St. George, N.B., has entered upon the production of pulp,

BRITISH IMPORTS OF WOOD PULP.

The figures below show the imports of wood pulp into Great Britain during the past five years. It will be seen that last year the total value of all classes of wood pulp imported into Great Britain amounted to £2,398,215, and supplies received from Norway represented 43·2 per cent., from Sweden 39·3 per cent., and from Canada 10·6 per cent. In 1898 the total value was £1,894,395, Norway's share being 51 per cent. ; Sweden's 29·2 per cent.; and Canada's 9 per cent. Whilst Norway's participation of the total value last year fell off 7·8 per cent., compared with 1898, Sweden's increased 10·1 per cent., and Canada during a period of five years has succeeded in supplanting other countries to the extent of 16 per cent.

TOTAL IMPORTS.

1902	525,799 tons	£2,398,215

PULP NOTES.

The E. B. Eddy Company, of Hull, Que., recently installed two new grinders in No. 2 mill to increase the output of ground wood pulp to keep pace with the manufacture of paper.

The Spanish River Pulp & Paper Company have their mills at Webbwood, Ont., nearly completed. They will take out a large quantity of pulp wood this winter, and will likely commence to manufacture pulp early in the spring.

An official of the Timber Estates Company announced when in Montreal recently that arrangements had been completed for the sale of extensive timber limits and mills in Newfoundland to Harmsworth Bros., of the London Daily Mail.

The pulp wood for the Trader's Paper Mill at Lockport, N. Y., has been obtained mostly by rail from Canada. It is now proposed to discnrd the rail service and have the wood shipped by boat across Lake Ontario to Alcott Harbor, and thence by trolley to the mills at Lockport.

The Price-Porritt Pulp & Paper Company have their new pulp mill at Rimouski, Que., in operation, turning out 30 tons of dry pulp per day. The mill is located on the Gulf of St. Lawrence. The pulp manufactured is carefully screened and is pressed with hydraulic presses, giving a uniform percentage of 50 per cent.

Charles H. Vogel, of Ottawa, is engaged on preliminary plans for the improvement of a water power in the Lake of the Woods district, estimated at 15,000 horse power and said to be one of the best in North America. It is the intention to utilize the power for the operation of pulp and paper mills to be built there.

The Canada Paper Company, of Windsor Mills, Que., have adopted a novel scheme to increase the interest of the emp'oyees in the business of paper manufacturing. They offer prizes for the most valuable suggestions touching the operations of the plant, such as suggestions for improving the bleaching and sizing, for improving the steam plant, and for paper-making methods generally.

The Year Book of Canada for 1902 shows that the wood pulp industry for the calendar year mentioned was carried on by thirty-five mills, which had an output of 240,989 tons of wood pulp. Of this quantity 155,210 tons were mechanical pulp, 76,735 sulphite, and 9,044 soda. The corresponding quantities for 1901 were : Mechanical, 169,360 tons; sulphite, 84,500 tons; and soda, 10,740 tons. This shows a decrease of 23,611 tons in 1902. The decrease is distributed : Sulphite, 7,765; soda, 1,696; mechanical, 14,150 tons. The total value of the output of 1902 was $4,383,182. Nine of the thirty-five mills manufacture sulphite pulp and four soda pulp. Twenty-five mills manufacture mechanical pulp and four make both chemical and mechanical. Taking the returns of thirty-two mills, the average time the mills ran during the year was ten months. The value of the exports of pulp in 1902 was $2,511,664, while the consumption in the domestic market was valued at $1,871,518. Canada exported about 57 per cent. of her production, Great Britain taking $976,192 worth, and the United States $1,518,139.

THE NEWS

—The Prairie Lumber Company are building a new warehouse in Winnipeg.

—John H. Marshall is offering for sale his planing mill at North Bay, Ont.

—The Red Cedar Lumber Company, Limited, has been incorporated by the British Columbia Government.

—R. McKinney & Company have sold their lumber business at Carman, Man., to the Manitoba Lumber Company.

—W. H. Hilliard, of Minnedosa, Man., has sold his Clan William lumber yard to the Prairie Lumber Company.

—The Pigeon River Lumber Company will this fall make further improvements to their saw mill at Port Arthur, Ont.

—The Prairie Lumber Company, of Winnipeg, has opened a lumber yard at Gainsboro, Man., with J. A. Telfer in charge.

—The Drummond Lumber Company has been formed at Daveluyville, Que. W. Mitchell is president and W. J. Noble secretary.

—Cowan & Company, who operate a saw mill at Trout Lake, B.C., intend building another mill with a capacity of 60,000 feet per day.

—G. H. Gilpin, of Cranbrook, B.C., has bought the saw mill of the Cedar Valley Lumber Company at Morrissey, B.C., from Hanson & Baker.

—William Button, of Wingham, Ont., has purchased a quantity of standing timber in the vicinity of Creemore, where he will establish a saw mill.

—The saw mill at Sydney, on Vancouver Island, B.C., has again resumed operations, after having been idle for a long time. The new operators are Seattle people.

—Fraser & Company's new saw mill at Deschenes, Que., was put in operation for the first time on September 1st. The mill is one of the most up-to-date in Canada.

Mott, Son & Company have sold their saw mill at Fernie, B.C., to the Elk Lumber & Manufacturing Company, who contemplate the erection of a mill at Hosmer.

—The town of Renfrew, Ont., propose to grant a loan of $18,000 to induce the Cumming Manufacturing Company, of Clarksburg, Ont., to locate a wood-working factory there.

—The new saw mill of the John Harrison & Sons Company, at Owen Sound, Ont., will have a daily capacity of 1,500 ties and will give employment to about twenty persons.

—The landowners of Langley municipality, in British Columbia, have petitioned the Government to construct a railroad through the Fraser River Valley, where there are large tracts of valuable timber. This timber is frequently burned by the settlers on account of the lack of transportation to enable them to market it.

—J. A. Hayden's new saw mill at Woodstock, N.B., was put into operation about September 1st, Mr. Hayden's eldest daughter standing at the lever and sawing the first log.

—B. Wicket and Thomas Hunt, of Powassan, have gone to Arrowhead, B.C., to build a large saw mill for George McCormick, M.P. for Muskoka, W. R. Beatty, of Parry Sound, and others.

—The safe crackers, Johnson and Smith, arrested for the robbery of money from the safe of the Pigeon River Lumber Company at Fort William, Ont., were sentenced to ten years' imprisonment.

The Library Bureau of Canada has been incorporated at Ottawa, Ont., with a capital of $150,000. The company have taken over the hardwood department of the W. C. Edwards Lumber Company.

—It is said that the Hanbury Manufacturing Company, of Brandon, Man., have purchased the saw mill at Cranbrook, B.C., formerly owned by Leask & Slater, with a daily capacity of 50,000 feet.

—It is reported that the demand is starting very early this year in the Maritime Provinces for lumbermen's supplies, several large orders having been placed with local manufacturers for axes, peavies, etc.

—British Columbia loggers are said to be considering the question of building a large saw mill, for the purpose of competing with the members of the British Columbia Lumber & Shingle Manufacturers' Association.

—The British Columbia Mills, Timber and Trading Company, of Vancouver, B.C., have made application to the city council for foreshore rights for the purpose of extending their saw mill and wood-working factory.

—The death occurred recently at Victoria, B.C., of George Cheetham, the leading man of the Songhees tribe. He had worked in Sayward's saw mill for thirty years, and had won the respect of the whole community.

—The saw mill at Enderby, B.C., owned by S.C. Smith, of Vernon, has passed into the hands of the Okanagan Lumber Company, of which J. Taylor, of Arrowhead, is the principal. The capacity of the mill will be increased.

—A. McTaggart, of Glencoe, Ont., recently visited Thamesford for the purpose of ascertaining the quantity of timber in the vicinity, the Sutherland-Innes Company, of Chatham, having in view the erection of a cooperage mill here.

—H. J. Hyne, of the firm of Hyne & Sons, lumber merchants, Maryborough, Queensland, Australia, was a recent visitor to Canada. He was making a tour of the world and collecting as much information as possible on business and educational matters. He expressed his belief that Australia was in favor of a preferential tariff policy.

—The old reliable lumber firm of M. M. Boyd & Company, of Bobcaygeon, Ont., is shortly to go out of business so far as operations in Ontario are concerned. Their limits have been pretty well cleaned up, and it is the intention to transfer operations to British Columbia, where the firm have an extensive saw mill, on Vancouver Island. The firm was one of the pioneers in Ontario lumbering, having a successful career of nearly half a century to their credit. Their mills were located at Bobcaygeon, Lindsay, and Fenelon Falls.

—Employees of lumber companies will do well to remember the case of Peter Barnum, of Trenton, who was recently fined $10 and costs for jumping his contract with the Turner Lumber Company to work in their logging camps, after having had his fare paid to his destination by the company. Having no money he was compelled to accept imprisonment.

—The J. E. Murphy Lumber Company has recently been incorporated by the Ontario Government, with a capital of $100,000. The provisional directors are J. E. Murphy, H. F. Murphy, O. A. Murphy, A. J. McPherson and Walter Miller. The head office of the company will be at Milford Haven, on St. Joseph's Island, where the company are now erecting a saw mill.

TRADE NOTES.

The business of Peter Hay, manufacturer of machine knives, Galt, Ont., is to be turned into a joint stock company.

The Robb Engineering Company, of Amherst, N. S., have just given out the contract for the erection of a large addition to their factory to cost about $30,000.

The W. J. Bradley Machinery Company has been organized in Toronto by W. J. Bradley, W. J. Bradley, Jr., P. H. Bradley, and E. F. Bradley. The capital is to be $50,000.

It is reported that the Port Huron Thresher Company, of Port Huron, Mich., have received an order for a large number of portable saw mills for shipment to the Canadian North-West.

An artistic souvenir badge was handed to the delegates at the recent Hoo-Hoo convention in Buffalo by Joshua Oldham & Sons, the well-known saw manufacturers, of Brooklyn, New York. Needless to say, the circular saw was a prominent feature of the design.

A special tariff edition of the Canadian Manufacturer, just published, contains an accurate reproduction of the official texts of the tariffs of Canada, United States, Great Britain, the Commonwealth of Australia and British South Africa, and will be found valuable for reference.

Messrs. E. C. Atkins & Company, Incorporated, of Indianapolis, Ind., are sending to their friends and customers a new inserted tooth circular saw booklet, in the design of a circular saw. It is very handsome and unique, and should serve to emphasize the many good points of the Atkins' saws.

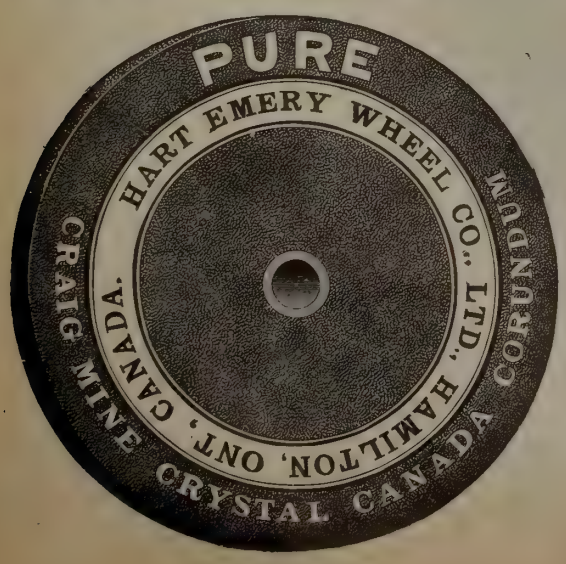
Messrs. Sadler & Haworth, of Montreal and Toronto, have for many years been engaged in the manufacture of leather belting. In their advertisement in another part of this number, they direct the attention of the readers of this journal to the high standard of merit which their product has attained.

The old Allan foundry at St. John, N. B., is now being operated by George H. Waring and William Bruchof, under the name of the Union Foundry & Machine Works. This new arrangement resulted in the retirement of Mr. Waring from the position of mechanical superintendent for the Cushing Sulphite Fibre Company.

HYMENEAL.

Mr. H. F. Terry, the popular lumber salesman for C. A. Larkin, of Toronto, and Miss Agnes Maud Addison, eldest daughter of Mr. W. F. Addison, were happily united in the holy bonds of matrimony at the home of the bride's father, 76 Harvard avenue, Toronto, on September 16. Rev. R. J. Treleaven officiated. The bride is highly esteemed by a host of friends, who attested their admiration by giving many beautiful presents. Mr. and Mrs. Addison will reside on Harvard avenue. We extend to them our congratulations and hope they may enjoy many years of happiness and prosperity.

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says:

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by Canadians for Canadians.

HART EMERY WHEEL COMPANY, Limited, Hamilton, Ont., Can.

DISPLAY OF TRANSMISSION APPARATUS.

Those who visited the recent Exposition in Toronto probably found no more interesting exhibit than that of the Dodge Manufacturing Company, of Toronto, Limited, for the display of this company attracted about as much attention as any individual exhibit at the Fair.

Connected from the main shaft in the building, there was shown a complete rope drive, after the famous Dodge Continuous System, which showed the splendid efficiency and remarkable simplicity of this method of driving and demonstrated its points of superiority to the eye of even the unskilled observers. In this connection the travelling take-up carriage was shown to splendid advantage in its relation to the rope drive.

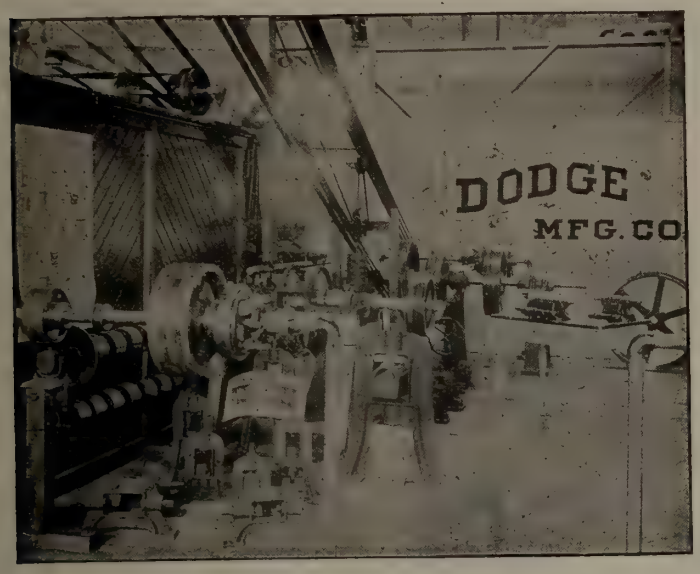


Exhibit of Dodge Manufacturing Company at Toronto Exhibition.

Forming the rail around the booth was shafting of the company's immense line which was fitted with the famous Dodge friction clutch, which attracted attention and admiration from everyone. Piled high in columns at one side of the exhibit were columns of the Dodge wood split pulley which was shown in all sizes from the small one three inches in diameter to the large and heavy ones.

Within this enclosure was displayed the complete line which the company manufacture —couplings, hangers, ring, chain and capillary self oiling bearings, machine moulded iron pulleys, clutches and a full line of grain and elevator machinery.

To see the remarkable ease and smoothness with which these appliances run, one would scarcely think that they were such important adjuncts in the manufacturing plant, yet nothing was demonstrated in the exhibit which the Dodge appliances will not perform in actual operation.

PERSONAL.

Mr. Jonas Howe, of St. John, N.B., who has for several years been prominent in the cruising of timber lands in the Maritime Provinces, left recently for British Columbia, to make an inspection of limits there in the interest of eastern capitalists.

The B. C. cargo branch of the Pacific Coast Lumber Manufacturers' Association presented Mr. R. H. Alexander, of Vancouver, with a $350 gold watch in recognition of his services to that association. The watch is a handsome example of the jeweller's art.

Mr. W. J. Hamilton, of Peterborough, Ont., has been appointed mechanical superintendent for the Owen Sound Iron Works Company, of Owen Sound, thus relieving Mr. Wilson, the general manager, of important duties and permitting him to give greater attention to business management.

The citizens of Parry Sound, Ont., were greatly shocked by the announcement of the sudden death at Sudbury of Mr. Frank Halliday, Crown Timber Agent for the Parry Sound district. Mr. Halliday was making an examination of timber limits when he contracted inflammatory rheumatism, his death taking place within a few days after being removed to the hospital. Before his appointment as Crown Timber Agent deceased was an active politician and once unsuccessfully contested Addington for the Legislature. Mrs. Halliday survives him.

CROWN TIMBER DUES.

Ottawa, 14th September, 1903.

Editor Canada Lumberman:

Dear Sir,—Your correspondent "A New Brunswick Lumberman," in the September number of the Canada Lumberman, is in error as to the rate per thousand feet B.M. on white pine saw logs in the Provinces of Quebec and Ontario. He gives 65 cents for Quebec and $1.30 for Ontario. The rate of dues payable per thousand feet B.M. is: Quebec, $1.30 per thousand, and Ontario $1 on limits sold prior to 1892 and $1.25 on limits sold at that date and subsequently.

His remarks as to cutting regardless of size is in the right direction. Small logs should be restricted by the respective Crown Lands Departments of the different provinces, irrespective of the time limit to which the renewal of licenses may be subject. The Quebec regulations by section 12 restrict the cutting of pine trees less than 12 inches on the stump, but it is a question whether it is observed strictly.

Yours truly,
"Subscriber."

YOU CANNOT AFFORD TO BE WITHOUT A

GEORGE LUMBER REGISTER
The Only Perfect Register on the Market

We will send one of these Registers FREE on 30 days trial to any address and pay return charges if not entirely satisfactory.

The GEORGE REGISTER
is being used by the largest Planing Mills in the country, who have given their written testimonials.

Here is a sample :—

The Stouffville Brass & Steel Works,
Stouffville, Ont.
Burks Falls, Ont., Feb. 13, 1903.

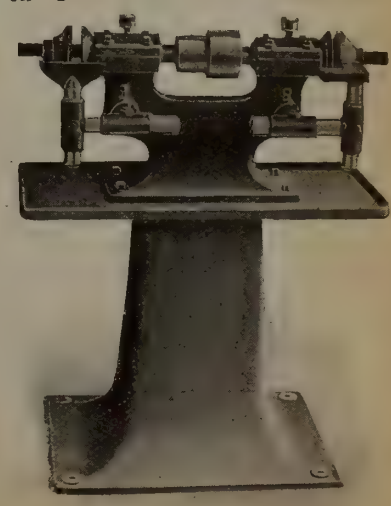
Gentlemen,—In answer to your inquiry with regard to the S. George Lumber Register, we desire to say that it has given every satisfaction. We put in one of 18000 ft. capacity lineal in the spring of 1902 and have used it constantly ever since and it has never given any trouble whatever, has never been out of order or laid up for repairs. We may further say that we are so well pleased with it that we have ordered another of the larger capacity of 60,000 ft. lineal, which we intend to use on another machine In conclusion we may say that we do not see how this machine could be improved upon and we feel certain that it will be a long time before a lumber register is produced which will be superior to the S. George. Yours truly,
THE KNIGHT BROS. CO., HENRY KNIGHT, Manager.

EMERY GRINDERS

The annexed cut represents our latest and most improved style of Emery Stand and the incessant demand for a frame that will resist the vibration of the stone when running at full speed has made us particularly careful to make "rigidity" one of the principal features of the same.

THE STOUFFVILLE BRASS & STEEL WORKS
STOUFFVILLE, ONT.

IF SQUARE BASE EMERY GRINDERS



Write for Prices and Terms.

MEASURING LUMBER.

There are still a few concerns who measure their lumber by the old and expensive way of a man and a measuring stick, but the new improved way is by means of the little machine called the George Register. This is claimed to be the only perfect lumber register on the market, and weighs but ten pounds. No lumberman, either saw or planing mill, can afford to be without this device.

The George Register is offered to all free on thirty days trial. Every person who has lumber to measure should read the letter published in our advertising columns from the Knight Bros. Co., of Burk's Falls.

The points of advantage in this register are as follows :—It is easily attached to the planer; it measures either forward or backward and therefore cannot make a mistake; it is graduated with absolute accuracy; it will save the wages of one man measuring every day it is used; it will measure any length of board, regardless of thickness; it will not slip on smooth or icy boards; it has a capacity of 60,000 ft. lineal; it cannot get out of order, and needs no repairs.

We would recommend that lumbermen write to the Stouffville Brass & Steel Works, Stouffville, Ontario, and get one of these registers, which are inexpensive.

The Stouffville Brass & Steel works also make emery grinders which are said to be the best on the market, a splendid planer chuck, and the well-known Simplex gasoline motor for stationary or marine purposes. Lumbermen should write this company for prices and catalogues of the above.

FOREST FIRES.

At the recent meeting of the Maritime Board of Trade the following resolution in respect to forest fires was adopted :

"Whereas there have recently been devastating fires in our forests and timber lands, and whereas the laws against setting such fires are either insufficient or inoperative, and whereas so much depends upon the preservation of our lands; therefore, resolved, that in the opinion of this board the time has fully arrived when some practical measures should be taken by our local governments to prevent the destruction of our forests by fire, either by the appointment of special guardians, or such other means as they in their opinion believe will attain the desired object. And, further resolved, that it is most desirable that the laws made, or hereafter to be made, regarding cutting undersized saw-logs, be strictly enforced."

What is said to be the largest log ever floated in Puget Sound has been towed into the Capital Box Factory pond. It is a 40-foot spruce log, nine feet through at the small end and fourteen feet through at the large end. It was cut on the Skagit river banks.

A MODEL KILN

The Kiln adopted exclusively by the Canadian Pacific Railroad Company at its new works at Montreal

Also used exclusively by the Pullman Company, The Brunswick Balke Collender Company and The Wheeler & Wilson Sewing Machine Company.

The most popular Kiln in North America to-day.

The first cost is less.
The building costs less.
It costs less to operate.
Requires less attention and yet dries faster than others with absolutely no injury to lumber.

THE E. LONG MFG. CO., ORILLIA, ONT.

SHAVINGS.

A firm in Germany is exploiting a process for staining timber, while in the log, any desired color. From samples exhibited this concern is apparently able to impregnate all soft-woods and some hardwoods with any desired shade, also to convert the lightest woods into tones as dark as ebony.

A builder of special wood-cutting tools says if it were not for the Canadian tariff he would sell five times as many machines in Canada as he now does. That suggests the idea, would Canadian or European builders sell any wood-working machines in this country if we had no tariff?—The Wood-Worker, Indianapolis.

A correspondent in Jamaica writes: "Sectional returns available show a marked increase in the importation of white pine lumber and deals, also in ready-made sashes, blinds, doors, buggy wood materials, etc., which I have satisfied myself are of Canadian origin; yet the probability is that the credit to Canada for these commodities will be insignificant."

South Africa has to import its hardwood sleepers. Tenders have just been invited for the supply of 120,000 hardwood sleepers 7 feet by 10 inches by 5 inches, to be landed in the Colony at the rate of 25,000 a month. It is a very surprising fact that not only South Africa, but East and Central East Africa have to depend on foreign sources for their timber supply generally.

A forest of camphor trees, covering an area of some 50,000 acres, has, according to the Anglo-Japanese Gazette, been discovered in the southern part of Talwan, containing, roughly, some 120,000 trees. The trees, which measure from eight to eighteen feet in girth, are estimated to produce 5,850 tons of camphor, worth 1,720,000 yen. In addition to camphor trees, the forest also contains a large number of oak trees of the "red-grained" variety.

There is reposing in the lumber shed of one of the navy yards a stick of lumber that is worthy of the attenton it is receiving from the old-time sailors and navigators. It is a piece of live oak, 37 feet long, 4 feet 10 inches wide and a little over 4 feet thick, and has become so hard with age that it requires the finest grade steel to make any impression on it. Its weight is estimated at between twelve and thirteen tons. The stick was originally designed for the stern post of a sister ship to the Hartford, but for some reason was never used. Some of the old tars want the stick cut and sent to a wood-working shop to be turned into pillars to be used in the corridor leading to the officers' quarters on the new battleship Connecticut.—American Lumberman.

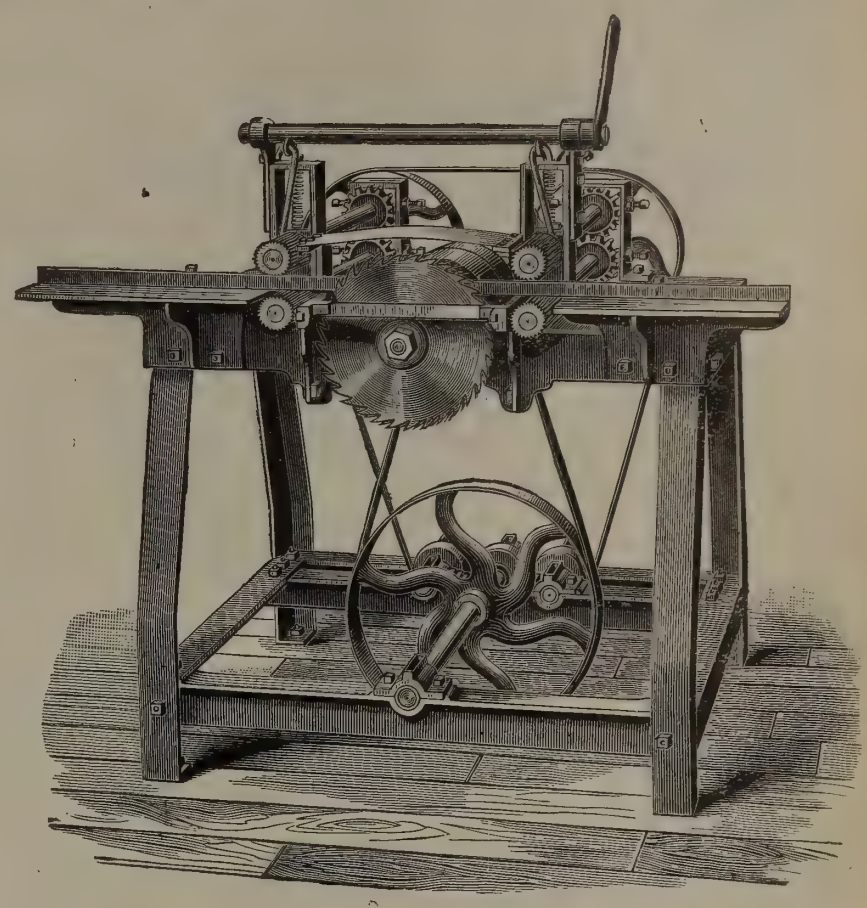
Improved Gang Lath Machine

This Machine has solid iron frame. The drive pulley, unless otherwise ordered, is 8 in. diam., 13 in. face. Feed and press rolls both front and back of saws are milled from solid steel bar and tempered very hard. As usually made it carries four 12 in. saws.

The machine throughout is thoroughly well made, designed especially for continuous fast work, and is capable of turning out a large quantity of work every day.

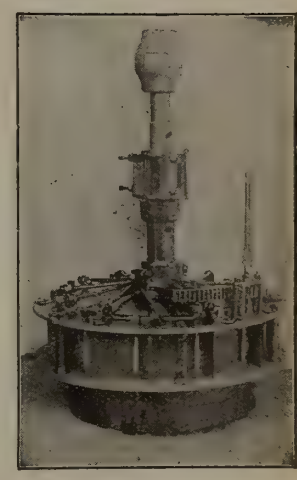
I manufacture other and heavier Lath Machines and Lath Bolters of various capacities, and have very complete line of both Stationary and Portable Saw Mill and Shingle Mill Machinery, and can quote very low figures to cash or short date customers.



F. J. DRAKE, - Belleville, Ont.

Do You Need a Turbine?

Now is the best possible time for replacing your old, worn-out wheel with a new Turbine that will save Worry, save Time, and make Money for you. If you want a well built wheel, a wheel that will give you steady reliable power every day, a wheel that will save water, a wheel that will last you a lifetime, and that is sold at a reasonable price, then write us for catalogue and prices on the



Standard Leffel and Vulcan Turbines.

They are better developers to-day than ever before, and are growing in popularity, as our order books show.

We have now for distribution our new **SAW** and **SHINGLE MILL MACHINERY CATALOGUES,** with engravings and descriptions of our machines with their latest improvements. We will be glad to send you one on receipt of your address. You cannot buy a better Portable Mill than the "Lane Improved".

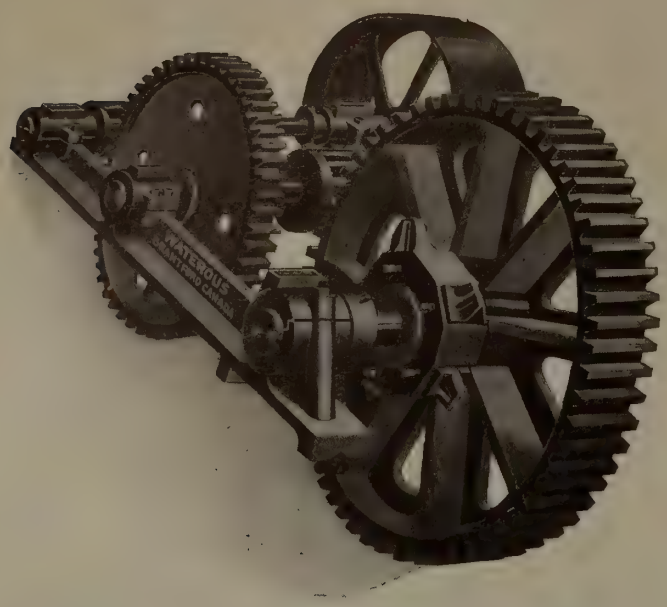
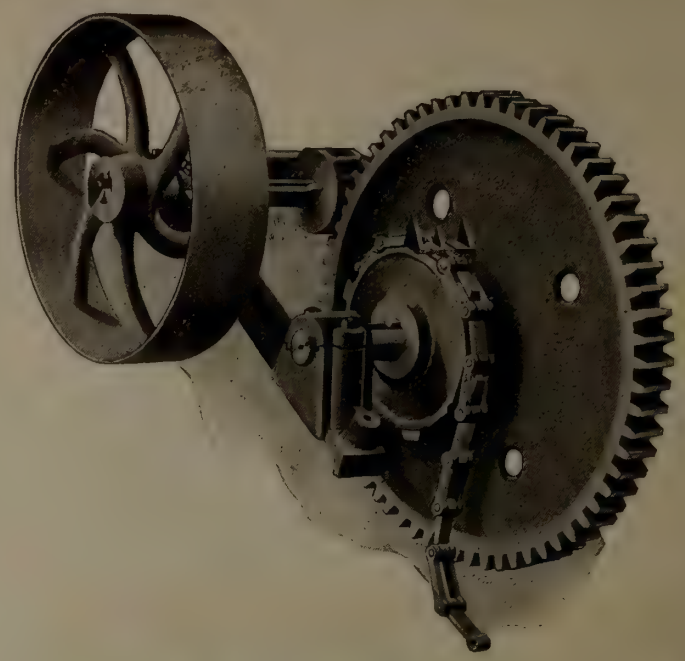
ENLDESS CHAIN BULL-WHEELS OR LOG JACKS



WATEROUS NO. 0 DOUBLE-GEARED LOG JACK

With spur gear to drive from shaft running across mill.

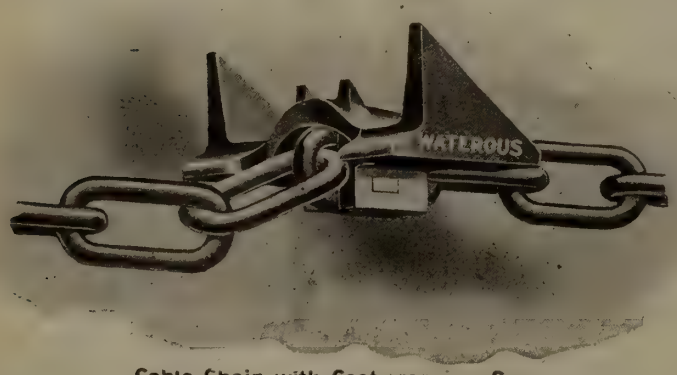
When needed to drive from shaft running lengthwise of mill, we replace smaller spur gears with bevel gears or frictions placed outside of iron frame.



WATEROUS NO. 1 SINGLE-GEARED LOG JACK

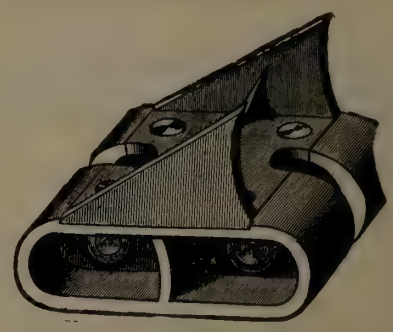
With No. 86 log chain. Cast steel spurs and centre links, steel side links, 6″ pitch. No. 80 log chain is the same style but heavier with drop forged center links, 8″ pitch.

PULLEYS CAN BE READILY REPLACED BY STRAIGHT FACE FRICTIONS.



Cable Chain with Cast Iron Log Spurs

Chilled wearing shoes 4x12″ on each side round link. Made 10″, 12″, 14″ wide for 1″, 1¼″ and 1½″ chain. Can't turn on chain.



Malleable Log Chains—Detachable, readily applied.

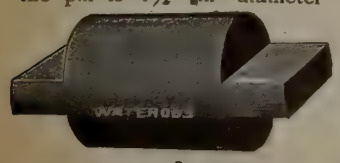
No. 86 Steel Chain (Cast Steel Log Spurs).

Rivets ¾″, side bars 1¾x⅝″, 8″ pitch, center (cast steel) 2¼x6″ pitch. Spurs 9″ point to point.

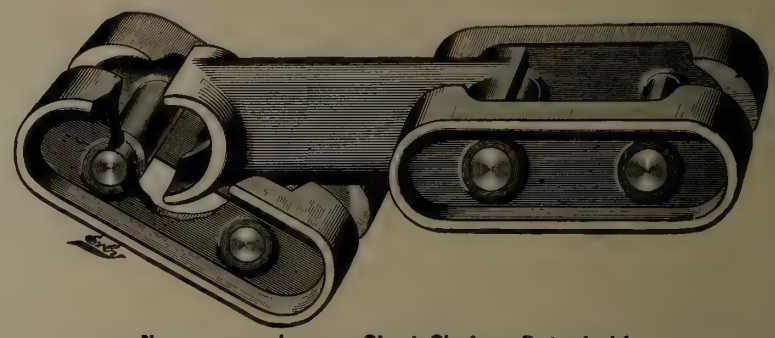
No. 80 Steel Chain

Is 8″ pitch similar to above, except that solid link is a drop steel forging, the pin is 1½″ in diameter (like illustration) and is fixed in position connecting side bars, presenting a large wearing surface for solid link. Side bars 2x1½′

Taking a safety of 4½″ this chain gives a 10,000 lbs. working strain. Log spurs same as No. 86 or of heavy forged steel, any spread desired.



PIN OF NO. 80 CHAIN.



No. 1050 and 1075—Giant Chains, Detachable.

Not recommended for salt water—but there is no better chain for fresh water.

Forged Refuse Chains

Save Labor — **Save Gumming**

Save Time — **Save Files**

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

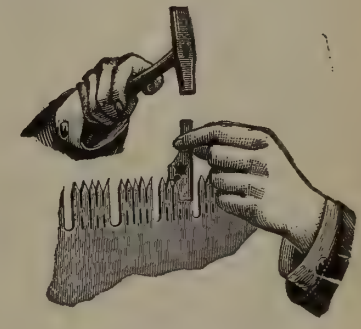
Maple Leaf Saw Set

MANUFACTURED BY

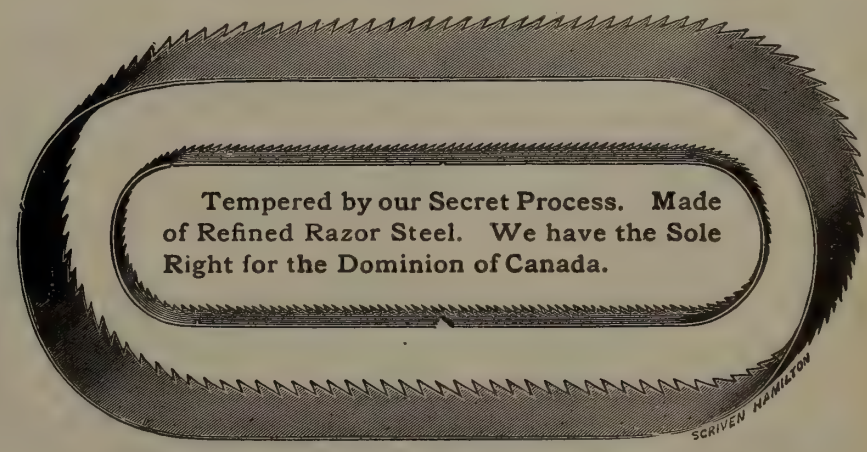
SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**



We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

Of All Widhs and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

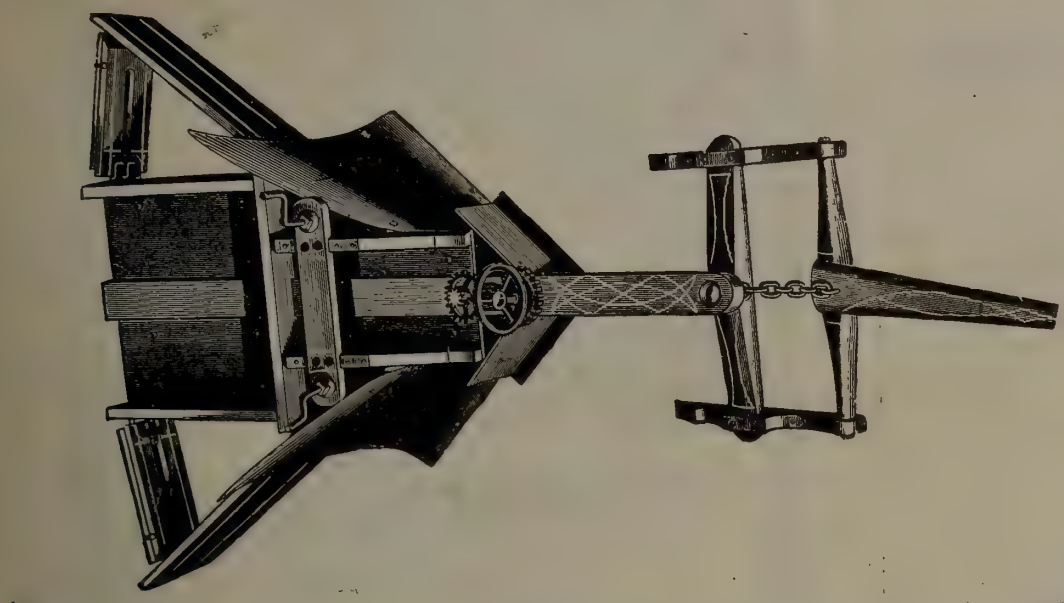
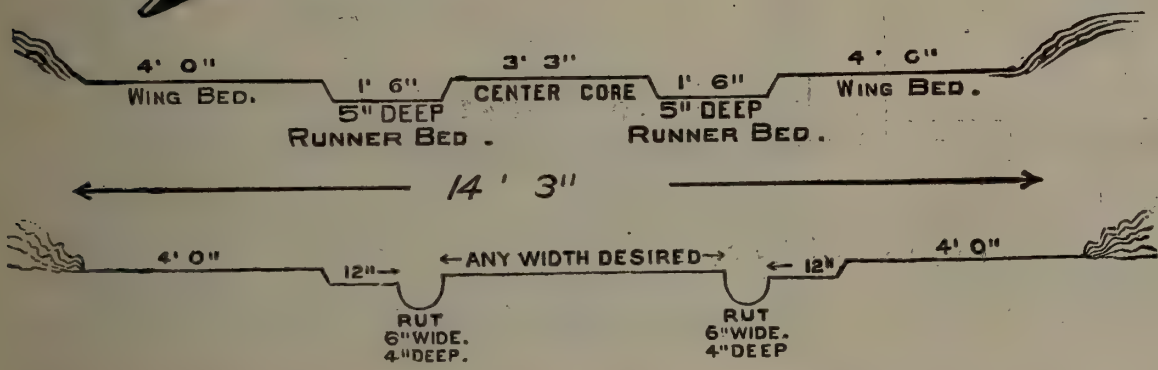
Snow Plough and Road Maker





Not a Lumberman in Canada can afford to be without a Snow Plough, Rutter and Road Maker. The foremost and most enterprising men recognize this and have placed their orders.

For use in snow and ice roads. Saves sleighs and harness. Endorsed by all lumbermen who have used them. Cuts six inches wider than sleighs. Rolls snow clear of track. Cuts off knolls, fills up holes. Levels roads perfectly, prevents sleighs from sluing. Cuts off dirt and manure, leaving it on bank. Ploughs up, rolls out and pushes clear 12 inches of loose snow each time machine passes over road.

An attachment for extra team behind machine can be furnished when required. Made all widths.

DO YOU LACK STEAM? WE CAN HELP YOU.

The Gordon Hollow Blast Grate

Makes the hotest fire of any device in existence.

30% MORE STEAM FROM THE SAME BOILERS.

"We first began using your grates some four years ago. At that time we were having much trouble in making sufficient steam for our mills, and we decided to try your grates, without much hopes however, of their helping us out, but it was either that or additional boilers. Since then we have put them in four of our mills, and our experiment has been entirely satisfactory. Their use has increased our steam capacity at least 30 per cent., and that without any additional labor on the part of the firemen—in fact, a lessening of their work—and we now keep steam with fuel that before we could not use in any manner. We have used the sawdust and slabs from logs that were thoroughly covered with ice and saturated with water, and which without the blast grates could not be burnt in any way, and with your grates have made plenty of steam. We can burn anything that looks like fuel and keep plenty of steam." TOWNLEY SHINGLE CO., Nettleton, Ark.

This is a fair sample of nearly 400 testimonials.

The TOWER 2 and 3-saw Edgers, Improved. For mills cutting not to exceed 20,000 ft. in ten hours.

The TOWER EXTRA 3-saw Edger. A larger and heavier edition of the TOWER for mills cutting up to 30,000 ft.

Why pay twice as much for an edger requiring twice the power and floor space, and doing no better work?

There are nearly 1200 of these edgers in use to-day.

The TOWER One-man 2-saw Trimmer. With this trimmer one man can easily trim the output of a mill cutting up to 30,000 ft. in ten hours.

THE ANSWER

Ask the best engineers and machinery builders that you know of, which is the best Babbitt Metal for all purposes they know, and they will certainly say the "SYRACUSE SMELTING WORKS" Babbitt Metal, as it has stood the test for the last 22 years in the United States and 15 years in the Dominion of Canada.

Run no chances in using inferior metal, but ask your dealer for the "SYRACUSE SMELTING WORKS" Babbitt Metal, the largest manufacturers of Babbitt Metal and Solder under the British Flag.

Montreal, Can., New York, U. S. A. and Seattle, Wash.

THE BURRILL LUMBER COMPANY.

The Burrill Lumber Company, of Burrill Siding, Que., have recently completed a new saw mill at Three Rivers, which is shown in the accompanying illustration. It is modern in every respect and capable of producing lumber at the minimum of cost.

The mill is situated on the east side of the St. Maurice river, in the parish of Cap Madeleine, and about one mile from the line of the Canadian Pacific Railway, to which a siding has been built. As shown in the picture, the land across the water is an island in the middle of the river, so that their booms and logs are well protected against freshets. Canal boats can come up alongside the mill, in fact, any boat not drawing over 10 feet of water. The company are in a position to ship by rail or boat.

The power equipment includes two five foot tubular boilers 12 feet long set upon Dutch ovens. These ovens have given the best satisfaction, the company having equipped six mills in a similar manner. They claim that there is no better furnace, when properly built, for burning sawdust and refuse. The engine in 18 inches in diameter with a 42 inch stroke, the resaw being driven by a separate engine 10X12 inch.

The mill is a circular, with steam feed and a No. 3 William Hamilton Manufacturing Company carriage, the capacity being from 35,000 to 50,000 feet per ten hours, according to quality of logs. There is a gang edger with one stationary and two moveable saws, moved by guides and with locked stops, a Duncan resawing machine for slabs to be butted, and four saw slashers. It is the intention to install a couple of shingle mills and a planing and finishing outfit for lumber, as well as a cutting-up rig for pulp wood.

The log supply for the mill is obtained from limits located along the St. Maurice and Shawinigan rivers. The head office of the company is at Burrill Siding, Mr. Vivian Burrill being manager and secretary.

SAW MILL OF THE BURRILL LUMBER COMPANY AT BURRILL SIDING, QUE.

The business of the Stewart Machinery Company at Winnipeg, Man., has been purchased by McGregor, Gourley & Company, of Galt.

J. J. McGill, A. V. Roy, Gustave Gravel and Magloire Huberdeau have organized the Corona Rubber Company, Limited, to manufacture all goods into the composition of which India rubber or gutta percha enters. The headquarters will be Montreal and the capital stock is $100,000.

A WIRE ROPEWAY IN THE ANAIMALAI HILLS.

BY HORACE H. GASS.

The utility of wire ropeways for transport is, perhaps, nowhere better exemplified than in countries possessing valuable products which are locked up for want of capital and enterprise to establish suitable lines for export over rough and inaccessible territory.

In India, for example, there are vast forests in mighty ranges of mountains, far removed from lines of railway and the road systems of the lowlands, containing valuable timber trees, many of which are little known at present, but which, with cheaper means of extraction, will in course of time, as the reliable woods become more difficult to obtain, find a ready sale in the home markets for all purposes for which hardwoods are required.

The vast importance of these forests cannot be overstated, and the Government of India devotes close attention to their preservation, maintenance, and improvement, at the same time not overlooking their commercial possibilities.

The Anaimalais (elephant mountains) of Southern India are an important centre of supply — the forests in this region, though much overworked in the past, still containing a large supply of exploitable wood of valuable species, the principal of which is teak. The climate being unhealthy, this range of hills is almost uninhabited by man, but is infested with wild animals. It is a long distance from the railway, and, though roads lead to the foot in various directions, there is only an indifferent car-track, with a very steep gradient leading up to the west of the outer slopes, and covering a distance of about 3½ miles. It is here connected with a two-foot tramway line, which runs into the heart of the forest. The line is worked by trolleys, drawn by bullocks. It has rendered good service in enabling larger logs to be extracted with an increased output of timber.

The ghaut road has always been a serious obstacle to work on a large scale, as the forests can only be worked during the rainy season, which extends from about the middle of June until the end of January, partly because of malaria, but principally for want of water. Torrential downpours make the road almost impassable at times by the havoc they cause, and it is so steep that it is not safe to metal it, or the draught bullocks descending the hill would obtain no foothold.

THE OLD METHOD.

Under the system at first employed in working these forests, the huge logs were dragged by elephants from the felling compartments to the side of the tramway, and transported on trolleys to the end of the line, from whence they were sent down the ghaut by bullock-cart into a large town about fifty miles distant, to be disposed of by auction sales. All this was costly; the sales were uncertain, and the rates low. To improve them it appeared to be desirable to place the timber on the market in a more saleable form for small purchasers, and to reduce the costs of extraction. The former has been effected by the establishment of a sawmill in the forests, worked by water power, with a Pelton wheel, the timber being sawn into marketable size, and the latter, by setting up a wire ropeway or timber-run from the crest of the hills overlooking the plains, in order to dispense with the use of the ghaut road—the most costly section of the journey. The wire ropeway passes off from the lower end of the tramway line, and its lower extremity is close to the main road. The sawn wood is thus conveyed from the saw mill by the tramway direct to the wire ropeway, and in this way reaches the foot of the mountain.

DESCRIPTION OF NEW ROPEWAY.

This wire ropeway has been constructed under the orders of the Madras Government by the Forest Department. The principle is a simple one. A loaded carriage travels down a main fixed rope by gravitation, hauling up an empty carriage on the same rope—the two carriages meet in the centre and are there transferred by an arrangement described below.

The descending carriage is controlled by an endless thin hauling rope adjusted below the main rope, passing twice round a brake drum, and kept in check by a powerful brake strap, and a large deeply grooved wheel at the foot. Fig. 1 shows the brake drum from the front.

The thin hauling rope is clipped on to the two carriages on the right hand side, looking in the direction in which each is travelling.

The ropeway between the terminals is 6,318 ft. long, and the length of line actually traversed by the carriages, 5,284 ft.

It became necssary to advance the starting platform sufficiently to bring the central or transfer platform on to a ridge within easy reach of the rope. The total fall from terminal to terminal is 1,031.58 ft.; that from the upper terminal to the starting platform, 109.50 ft.; from the starting platform to transfer staging, 488·70 ft.; from the transfer station to the lower terminal, 433·38 ft. The rope crosses two main valleys and a number of ravines, the ground being much broken up and rocky in parts.

The rope is supported in eight places up to the starting platform, and in twenty-three between it and the foot. The supports in the former consist of wooden grooved saddles resting on crossbars, and in the latter of hangers and cast iron saddles.

There are six main spans of 554, 1,675, 510, 600, 355, and 712 feet respectively. The fixed rope is 2⅞ in. in circumference, with six strands and a hempen; each strand contains seven wires of best steel.

The thin, or hauling, wire rope is ⅞ in. in circumference, with five strands and a hemp core, and each strand contains four wires. This rope can be seen in fig. 1. The brake drum is 4 ft. inside diameter.

The brake strap is adjusted to the upper half of the drum, and acted on by a handle at the side. The lower part of the drum is housed with hard-wood, and hollowed out to prevent the folds of the rope overlapping. The axles of the drums run easily in deep substantial bearings. The large grooved wheel at the foot is also 4 ft. in diameter, but calls for no special description.

The hanging supports consist of two curved wrought iron plates, 3 ft. long, forming a circular opening at the top 8 in. in diameter, and connected at the bottom by a grooved saddle, in which the rope rests, sloped at the ends to prevent injury to the rope.

The saddles are of cast iron, of similar make, and are used in a few places, resting upon wooden brackets and supports projecting from them conveniently near the line.

THE CARRIAGE.

The carriage consists of two curved wrought iron hangers, connected together by pieces of timber with grooved runners, 9 in. in diameter to the edges, with 1½ in. grooves—the carriages were first used with two wheels, as shown in fig. 2, but experience has shown that it is best to use four wheels.

Four patent clips are attached to each carriage, two to the bottom side of each connecting block. It has been found more convenient to have them attached to the bottom than to the sides. Each clip is provided with a clamping screw.

The nearer the wheels are brought together the more easily the carriages will travel. When they are placed some distance apart they do not travel in the same plane, and set up much friction on the rope.

The plant was designed and constructed by Messrs. Bullivant & Co., Ltd., of 72 Mark Lane, and the materials are of the best description, a fact that will be fully recognized when it is stated that until lately the longest span was 2,212 ft. horizontal distance, and that loads weighing about 1,400 lbs., exclusive of the weight of the carriage (about 400 lbs.), have been sent down in large numbers quite safely.

CONSTRUCTION OF THE LINE.

The first step towards the installation of the wire ropeway was the selection of the most convenient line, and laying it out and clearing it— a by no means easy matter, as it lay through heavy forest. The supports were then set up.

The anchorages were next prepared, and as there was no natural rock in the right place, large boulders, each weighing about 15 tons,

FIG. 1.—THE BRAKE DRUM.

were dragged by elephants, and dropped into position at each end of the line. Holes had then to be drilled in the boulders for the legs of the iron anchor bars—4 ft. in length and 3 in. thick. Two massive cables—24 in. long, for the upper anchorage, and 12 ft. for the lower, were then attached to the anchor bars, and the latter were firmly fixed in the rocks.

The unreeling of the rope followed, commencing, of course, from the bottom of the line. This was received from Messrs. Bullivant and Co. on a large iron reel or bobbin, the total weight of the rope and reel being about 4 tons. An axle was passed through a hole in the centre, and the reel was swung clear of the ground.

It was first intended to carry the rope up the hill on the shoulders of the coolies, placed at intervals of 30 feet, but the broken nature of the ground made this difficult to carry out, and eventually elephants were attached to the end of the rope to haul it up. The friction caused by the rope dragging along the ground was, however, so great that at the end of the journey no less than nine elephants were used in addition to a large body of coolies.

Sliced into the end of the rope was a massive thimble, or eyelet. This was attached to the chain, and the rope was fixed to its upper anchorage. It was then raised on to the supports and connected on to the anchorage cable at the lower end, and hauled in by means of a small winch, provided with the necessary two and three sheave blocks and best flexible rope. Sufficient tension was obtained to give a dip in each span of about 1 in 40.

The unreeling of the hauling rope followed, and the two ends were joined. The rope is, of course, adjusted below the fixed rope, and is drawn reasonably tight. The up and down sides are arranged 18 in. apart, corresponding with the distance between the inner edges of the clips on the carriage, and kept in that position by means of fixed guide wheels, which lead the rope to the drum (shown in fig. 1) and large wheel at foot. It was a matter of some difficulty to overcome the friction set up on this rope, which of course checked the loads. The design of rollers had to be changed several times, the last and most successful being large grooved pulleys, about 18 in. in diameter, running easily on the bearings, and provided with wooden guides placed above them to lead the thin rope into the grooves.

The supports for the hangers and saddles vary in height from 8 ft. to 75 ft., and consist, as a rule, of two uprights and a stout 8 in. crossbar. In a few instances standing trees have been utilized as uprights.

The best positions for the supports have been ascertained by experience alone, various changes being necessary before a constant fall was secured. The very long span was necessitated by the configuration of the ground, and as the rope is about 200 feet above the ground in the middle of this span, it will not be possible to break it.

THE PLATFORMS.

There are four platforms. (1) The brake platform, 22 feet by 15 feet, is placed 30 feet to the rear of the starting platform. (2) The starting platform, 19 feet by 20 feet (fig. 2) is provided with tram rails, at the end of which is a weighing machine to ensure constant weight in the loads. (3) The central, or transfer platform is 40 feet by 8 feet, and 4 feet high, and placed at a distance of 10 feet from the line of the fixed rope. A trolley runs on this platform provided with a long wooden lever supported by a chain. A crossbar is attached to the end of this lever, corresponding in length with that of the carriage, and fitted with two upright iron plates to pass in between the wheels and the hangers of the carriage. The height of this platform is so arranged as to bring the lever when horizontal to nearly the level of the carriage. (4) The lower platform is 28 feet by 8 feet, and 5 feet high, and requires no explanation. The height is conveniently arranged with reference to that of the fixed rope.

METHODS OF WORKING.

The method of working the rope is as follows: The weight of the load has hitherto not been allowed to exceed that of about 22 cwt., or about 1,400 lbs. of timber, and, though it is possible to send down rough logs of that size, the work has been confined to the transport of railway sleepers and sawn scantling of different sizes.

Fig. 3 shows a loaded carriage passing a hanger, and that the construction of hangers, of supports, and carriage, enables this to be done with safety and ease.

Fig. 2 shows a load of seven railway sleepers attached to the carriage, and the next load ready in the trolley. In that picture the hauling rope is shown clipped up on both sides of

FIG. 2.—METHOD OF LOADING AND HAULING.

the carriage, which anchors it firmly. As soon as it is ascertained that all is ready below, that is to say, that the previous load has been removed and the thin rope clipped on to the empty carriage ready for the ascent, the hauling rope is detached from the left hand side of the loaded carriage and lowered on to the rollers below, and the carriage is started, descending at a high speed, some twenty miles an hour, to the central station, and kept under control by the brake drum. The two carriages meet here, and are stopped at a distance of about ten feet or more, according to the length of the scantlings. The trolley and lever are then brought opposite to the empty carriage, and the crossbar engages it, the outer end of the lever is pressed down to raise the grooved wheels off the rope and then pushed forward for a few inches to clear the rope. The lever is then raised at the end, and the empty carriage with the hauling rope attached to it, falls downward slowly, till it is low enough to clear the loaded carriage. The latter is then advanced slowly and the trolley with the empty carriage comes forward on the rail a corresponding distance, and by means of a lever the carriage is raised and replaced in the rope.

The slow forward movement of the loaded carriage is obtained by means of a brake drum, which is now provided with gearing, and the drum is slowly revolved by hand. The carriages are again started, and the arrival of the empty carriage at the starting platform indicates that thel oad has reached the foot.

The supporting chains are provided with a hook and ring always placed on the outside, so that they can be released at once, and the load becomes detached. The hauling rope is then removed from the clips on the right-hand side, and the up rope is placed on those of the opposite side of the carriage, the same procedure being followed at the starting platform, and the new load is immediately attached, after taking the precaution referred to above to prevent the carriage starting prematurely.

The line is kept clear of growth, and the starting platform is so arranged that the central plattorm is easily visible from it. Flag signalling is found to be the quickest, easiest and safest method, and the brakeman is kept under control by a look-out man on the platform.

The method of transferring may appear to be somewhat primitive, involving the use of superfluous manual labor, but, after careful consideration, it is found to be the best means of working, and is preferable to an automatic arrangement, which would be certain to come to grief continually andcause both carriages to fall off the rope. The lever arrangement works well and expeditiously.

THE OUTPUT.

The loads can be run down at the rate of about two to the hour, and the saving is very considerable, so that if it were possible to work throughout the year with sufficient material, this ropeway would show a handsome profit. Its output in work is far in excess of that of the sawmill, and it can be worked in all weathers.

The carriage of 20 cwt. of timber down the gaunt section of the road, inclusive of loading, unloading, and returning, would occupy about two days, against the half hour of the wire ropeway. Once at the foot of the hill, there is little difficulty in moving on the material, as bullock carts can always be obtained in the plains. It is the hill portion of the journey into the forest which the cartmen dread and will not undertake in the bad weather.—Page's Magazine.

FIG. 3.—A LOADED CARRIAGE PASSING A HANGER.

THINGS WE MAY LEARN.

That the horizontal type of the log band saw has advantages over its vertical rival is indisputable, the chief of these being: (1) The man required for setting the log up to the saw for each cut with the latter machine is entirely dispensed with in the case of the former; (2) the boards or flitches, when cut off by the horizontal saw, remain on the log after the cut, whereas when cutting large flitches from the log with the vertical band considerable labor is required to support the piece when the saw is finishing the cut; (3) the principle on which the horizontal saw is constructed insures more accurate work being accomplished than is possible with the vertical machine, owing to the increased liability of the log tilting from side to side in the case of the latter machine. As with many other things the best and most practicable principles in sawing machinery will ultimately assert themselves, independent of all criticism. So time alone will establish and demonstrate to us what are really the most rapid and superior systems of converting timber—at least so far as the vertical and horizontal log band saws are concerned. I know that there are more machines of the vertical type in daily use than the other, yet I venture to predict that the several superior merits of the horizontal saw will yet be more realized and recognized even in America, which place may be termed the home of the vertical principle; and, as our friends have imitated and improved many European inventions in the past, they may yet profit by the adoption of our methods and sawing machinery.—Timber News.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance.. $ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.
ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

BRITISH VS. AMERICAN METHODS.

"We turn out thirty-five machines a day and sell in Great Britain ten thousand machines a year," remarked the representative of a large United States manufacturing concern the other day. When the writer began to catechise him with the object of learning what induced Britishers to pass by the home manufacturer in favor of the foreigner, he was told that it was not because of the advantage of cheapness, as the price asked for the machine made in the States was as high as that of the British made machine. The American manufacturers' advantage was said to principally lie in two things—freedom from everything in the form of red tape in his manner of doing business and greater perfection in shop methods in the direction of cheapening production. The American manufacturer has been driven by the high price of labor to devote much thought to means of accomplishing as much as possible by means of machinery, thereby reducing human instrumentality to a minimum. As a result it is claimed that cost of production has been so reduced as to far more than offset the advantage of cheaper labor enjoyed by the British manufacturer. The fact that in an American manufacturing establishment six weeks were spent on the drawings of a machine which sells at $30, with the object of devising means whereby a flange might be placed on the end instead of on the side, thus enabling the parts to be put through without re-setting the planers, will serve to illustrate the care exercised in the drawing office. In this case no one will question the wisdom of the expenditure of $150 to discover means of effecting a saving for all time in the manufacture of even a low priced machine, the production of which, however, runs into thousands.

CROWN TIMBER LAWS.

Two of our Provincial Governments are about to enact new laws to govern the disposal of Crown timber. Those proposed by the Hon. E. J. Davis, Commissioner of Crown Lands for Ontario, are of a revolutionary character, although for some time it has been evident that the conditions would sooner or later call for a change in the management of the timber lands.

The Commissioner points out that the timber lands that are suitable for agriculture must be cleared off and opened up for settlement. On such lands the present system of selling the timber by area will be continued, but a new policy will be adopted in respect to lands unsuitable for agriculture. It is proposed to sell the timber on these lands on the stump by public competition at so much per thousand feet, the trees to be cut to be above a certain diameter and to be selected by a Government official. When these trees are cut those of the younger growth will have a better opportunity to develop. In the Temagami reserve, set apart in 1901 and containing 1,400,000 acres, a portion of the timber has already matured, i.e., it has reached an age where it begins to deteriorate and get knotty. This will probably be the first timber to be disposed of under the new plan.

The proposed selling method will be modeled somewhat after that in vogue in Germany. It will involve more stringent regulations in regard to fire ranging and the burning of the debris, but any additional expense involved will be certain to be more than offset by the benefits to be derived in the direction of perpetuating the forest supply. It is also the intention that the Crown shall assume control of the areas which have been under license but have been abandoned after being denuded of the timber.

The Government of New Brunswick have not yet definitely decided upon their future policy in respect to the sale of timber lands, but have held several conferences with the lumbermen with the object of framing such regulations as will secure a return to the Government commensurate with the value of the timber and at the same time not interfere with the progress of the lumber industry. The Surveyor-General has decided upon one point, namely, to advance the stumpage dues to $1.50 per thousand feet. It was proposed that the stumpage charge should be arranged on a sliding scale basis, the timber being undoubtedly worth more in some localities than in others, but this idea has apparently been abandoned as impracticable, and very wisely so. The question of tenure is one of very great importance, and strong arguments may be advanced in favor of long leases. The license would take greater care of the growing timber, would more carefully protect the timber from fire, and would exercise greater discretion in the cutting of trees, leaving the younger growth to become more valuable in after years. As against the granting of permanent or very long leases may be advanced the argument that it might interfere with the system of forest preservation which the Crown might desire to adopt.

AMBIGUITY OF LUMBER TERMS.

The tendency to-day in all branches of business is towards uniformity and standardization. The adoption of such methods as will facilitate the dealings of one with the other and limit the possibility of mistakes and misunderstanding is the object aimed at. In the lumber trade standardization is not unknown. The standard St. Petersburg deal is twelve feet long, eleven inches wide and one and one-half inches thick; the standard lath is four feet long and one and one-half inches wide; a log twelve feet long and 24 inches in diameter and containing 300 feet board measure is recognized as the standard. But when we consider the rules for grading lumber we must admit that such a thing as uniformity does not exist.

In this and the preceding issue will be found some expressions from lumbermen as to the meaning of certain lumber terms in common use. The disparity which is shown in the definitions given is sufficient to cause one to wonder that steps have not already been taken to remove the ambiguity which exists.

The opinions expressed would indicate that the term "mill run, culls out" means common and better, but in late years some manufacturers of hardwood lumber have adopted a grade of shipping culls and insisted on putting it into a specification of mill run, culls out, although the strict interpretation of the term would seem to exclude all culls whether shipping, mill or dead culls. This grade of shipping culls has been a bone of contention between seller and buyer, the latter claiming that such a grade is not recognized by the trade at large and is but the creation of the manufacturer. Nevertheless, in the present condition of the hardwood lumber market, the buyer is bound to respect the ideas of the manufacturer, whether agreeable or otherwise.

There seems to be even less unanimity of opinion regarding the meaning of "mill run." In pine lumber it is taken to exclude mill culls, it being usually so specified in contracts, but with hardwoods there seems no recognized custom. Some lumbermen claim that a buyer would be compelled to take the entire product of the log even to dead culls or refuse; others that dead culls would be excluded; while others go so far as to exclude mill culls from the specification. When hardwood lumber was less valuable mill culls were only saleable by special agreement. That is not the case to-day—they are recognized as merchantable lumber, and doubtless the buyer would be expected to take them under a contract reading "mill run." In the absence of proper legalized rules the lumber manufacturer or dealer has been able to change his grade to suit the conditions.

Another question which arises in this connection is what percentage of better shall be included in an order for common and better. If the seller chose he might put in 99 per cent. of common and one per cent. of better and yet argue with reason that his grading was in conformity with the specification. Indeed, it has frequently happened that the better end of the log has been taken out for deals, leaving a very small percentage of No. 1 and 2 cuts, and the buyer purchasing the lumber as common

and better has really not received that to which he was entitled.

Let us look at the explicit manner in which the rules of the National Hardwood Lumbermen's Association, now adopted quite generally in the United States, are framed. The word "culls" has wisely been eliminated from the rules and the terms No. 2 common and No. 3 common substituted therefor. Then the inspection reads: "Log run means the full run of the log with No. 3 common out. Common and better means the full run of the log with No. 2 and No. 3 common out. Common and better must contain at least 50 per cent. of firsts and seconds." Thus it will be seen that the possibility of misunderstanding is reduced to the minimum. A buyer placing his order with a United States manufacturer for common and better knows that he will receive at least 50 per cent. of firsts and seconds.

The lack of proper inspection rules is doing more injury to the Canadian lumber trade than may generally be supposed. Even Canadian dealers are placing orders for hardwood lumber with United States firms on account of the greater satisfaction found in doing business there, due to the better inspection methods. It is earnestly hoped that at an early date the lumber trade will get together and decide upon a reorganization of the inspection rules and the adoption as far as possible of standard grades.

EDITORIAL NOTES.

The unfortunate circumstances at the Soo, bad as they were, are being multiplied by persons and journals unfriendly to Canada. They seemingly would like to convey the impression that the entire future of Canada is wrapped up in and dependent upon the industries established by Mr. Clergue. The failure of an American to carry to success certain enterprises burdened by over-capitalization through the scheming of American financiers does not affect either the credit of Canada or the other less pretentious but more stable industries; nor does it prove that we cannot compete with other countries in the manufacture of pulp. The fact is that the pulp mills were about the only revenue producing concern of all the industries, and they were expected to make profit enough to pay interest on all the capital. As a separate proposition they would doubtless have made money.

Apropos of our remarks in our weekly edition on the grading of Canadian timber for export, we have been shown a communication forwarded to the Lumbermen's Association of Ontario by representatives of the British Timber Trades Federation. This communication defines clearly the defects in the manufacture and grading of Canadian lumber. It states that there is a great disparity between the quality of Canadian lumber shipped to England and the Swedish or Russian product. An illustration is given showing the result of one shipment of first quality Canadian pine made to England this year. This shipment contained 306 pieces of certain sizes more than were specified, while there was a shortage of 315 pieces in the other sizes. The custom of shipping deals of odd sizes is also referred to, and it is pointed out that a customer ordering a 9-inch deal probably does not want a 9½-inch deal, and that the half inch would be entirely waste. It is suggested that the policy of shipping red pine deals unassorted be discontinued, and that they be graded firsts, seconds and thirds. Stress is laid on the deterioration in the grading of pine deals. It may be said that any change in this respect is not confined to the British deal trade, as during the past few years, when lumber has been readily saleable, the grading generally has been lowered. When lumber becomes more difficult to sell it is quite likely that the standard of the grades will be raised accordingly.

THE LATE HENRY CARGILL, M.P.

It is not in mortals to command success;
We will do more—deserve it.

Suddenly at Ottawa on October 1st, death claimed as its victim Mr. Henry Cargill, Conservative member for East Bruce in the Dominion Parliament. He participated in a discussion early in the afternoon, and shortly afterwards complained of illness. Medical attendance was promptly obtained, but within a few hours he passed away.

The Lale Henry Cargill, M.P.

In his death Canada has lost one of her most enterprising and broad-minded citizens, and it may be truly said that he died in harness. As a lumberman and farmer he attained remarkable success—a success which will stand as an object lesson to the young men of Canada, won as it was by the application of energy, pluck and liberality. For all his enterprises were designed not only that he might profit thereby himself, but that they might be of benefit to the community in which he lived. He was a man of most amiable disposition, and was held in high system by all his acquaintances.

Mr. Cargill was a son of the late David Cargill, who in 1824 came to Canada from County Antrim, Ireland, and settled in Halton county, Ontario. The subject of this sketch was born in Nassagaweya in 1838. He was educated at local schools and at Queen's University, Kingston, and the devotion of a very large proportion of his time to business and politics failed to extinguish in him a love of books and of rational conversation.

Mr. Cargill was brought up to the lumbering business in his native place while it afforded opportunities for carrying on that industry, but nearly a quarter of a century ago he bought up the greater part of what is known as the "Greenock swamp," in the county of Bruce. It was originally a flooded area of some 30,000 acres, partly traversed but not drained by the Mud River, a tributary of the Saugeen. When the great land sale of 1854 laid the foundation of settlement in Bruce this area was left unalloted for want of applicants, and it was subsequently sold for what it would fetch under competition, the auctioneer of the occasion being the late J. C. Miller, of Parry Sound, then a clerk in the Crown Lands Department. As the lots were purchased by many different persons, while concentrated management alone would make successful exploitation possible, the swamp lay dormant for years, until in 1879 and subsequent years Mr. Cargill, seeing its potentiality, by degrees acquired the complete ownership of about two-thirds of the whole area. He erected a sawmill and other woodworking plant farther down the river, where the village of Cargill soon grew up on the Grand Trunk Railway; made roads and cut drainage canals though the swamp; carefully culled the timber for manufacturing purposes; and sold for farming purposes the lots thus redeemed from submergence.

For many years, in association with his son, and under the name of Henry Cargill & Son, he conducted saw and flour mills at Cargill, it being his aim to so manage his timber property as to perpetuate the supply.

Partly by the profits of business, but partly also by the steady appreciation of his continuously developing estate, he became a very wealthy man, but no one thought of envying him the possession of a patrimony so clearly the result of his own wisely-directed enterprise and so liberally and sensibly administered.

One of Mr. Cargill's recreations was stock-farming. Like many other men of quiet disposition and exceptional intelligence, he was very fond of thoroughbred horses and cattle, and if the demands of public life had left him the necessary leisure he would probably have risen to eminence among Ontario stock breeders.

As the unrenewable supply of timber on his swamp lands approached exhaustion he endeavored to develop other industries to keep up, if not increase, the prosperity of the little community of which he was the founder and the village where he continued to live and which is known by his name.

Mr. Cargill was a Presbyterian in religion and a Conservative in politics. In 1887 he was elected to the House of Commons for East Bruce, a constituency he continued to represent up to the time of his death. In 1864 he married Miss Margaret Davidson, who, together with one son, Mr. Wellington Cargill, and two daughters, survive him.

The United States Bureau of Forestry has begun the collection of information as to the suitability of balsam fir for pulp making.

VIEWS AND INTERVIEWS

In British Columbia the life of a pile is not more than two years, so great is the destruction caused by the toredo. Pile hammers may be seen almost at any time at work in the harbors replacing the destroyed timbers. This is not a difficult undertaking in the case of wharves, piers, etc., but to insert new piles under buildings which have been built out into a harbor is another proposition. One of the largest saw mills in the province is so constructed as to be affected by the work of the toredo, and I am told that the manager proposes to overcome the difficulty by surrounding the piles and other timber work with sawdust. It is known that the acid in red cedar sawdust is destructive of the toredo, and it is expected that it will prove sufficiently so to prevent any injurious results to the timber. The experiment is being watched with interest.

* * *

John McDonald is well known to the lumber fraternity, having been for some time with the Robert Thompson Company, of Hamilton. Latterly, as many of our readers are aware, he has been associated with Meaney & Company, of Toronto. Mr. McDonald is a student of lumber conditions and can make some interesting comparisons. As touching the advance in the value of lumber, he instanced the fact that only five years ago he had purchased first and second elm lumber for the price that is being paid to-day for mill culls. This represents a wonderful appreciation in lumber values. For some years previous to that time mill culls were almost unsaleable, while to-day they are worth from $8 to $12 at the mill. The inspection rules adopted by the Lumber Section of the Toronto Board of Trade in 1890 read: "Culls include all widths, lengths and sizes, except such stock as will not work one-half without waste. O her than the above are classed as mill culls and have no value in this market." The day when mill culls have no value is hardly likely to return.

* * *

A prominent Toronto wholesaler, while commenting upon the quantity of United States lumber imported into Canada, made some pertinent remarks as to the cause of such importation. In his opinion it is due in part to the unsatisfactory conditions existing in the Canadian trade in respect to inspection, there being no uniform rules for guidance. "We are buying cypress, oak and Southern pine in place of Canadian lumber," he said, "for the reason that there is more satisfaction in handling this stock. If, for instance, we order a car-load of first and second clear finish, we know exactly what we will get. Many of our customers buy the stock without inspecting it, having become accustomed to rely upon the inspection. In this country the mill man may hold one view, the dealer another and perhaps the customer another, so that disputes are constantly arising as to grades." In refusing to get together and adopt standard inspection rules the lumbermen of Canada are standing in their own light and doing much to encourage the importation of foreign lumber. They are crying out against such importation, but neglect to take one of the essential steps to limit the competition.

* * *

How best to handle the cargo lumber trade of the Pacific Coast was a problem which until recently seemed difficult to solve. Various schemes were submitted, only to be turned down as unworkable. One or two of a rational character and apparently possessing more merit than the others, were given a trial, but in practise they did not work out satisfactorily. To Mr. R.H. Alexander, of the British Columbia Mills, Timber & Trading Company, of Vancouver, is due the honor of devising a scheme which has been accepted by the trade generally, and which has been in operation for the past year or two. This honor is no mean glory, for be it known that many brainy men of California, Washington and British Columbia had racked their mental powers in the hope of hitting upon some plan which would meet the conditions. Mr. Alexander's plan was criticized, for no undertaking of such magnitude and involving so many diversified interests could fail to possess some points of weakness, but it has proved by long odds the the most pracitical of any scheme thus far submitted; and now a plan modelled after it is being inaugurated to handle the shingle output of British Columbia. The able services of Mr. Alexander have been recognized by the Lumbermen's Association by the presentation to him of a gold watch, said by one who has seen it to be a perfect gem.

* * *

A story is told about a Renfrew lumberman, who has been dead some years. He was well-to-do, but anyone who judged him by his clothes would be much disappointed. He was getting on in years and wealth and the infirmities of age began to tell upon him. He was advised to see a famous specialist in Montreal and visited the metropolis for the purpose. The specialist's custom was to charge his patients according to their means and he invariably enquired what they did for a living. When the examination of the old lumberman was over the specialist asked him what he did for a living.

"I work around a sawmill," was the answer.

Then the specialist asked a very moderate fee and at once his patient pulled from one of his pockets a big roll of bills, all of large denomination. While the doctor changed one of the bills to take out his fee he could not repress his curiosity or astonishment.

"You say you work around a mill?" he asked.

"Yes," came the laconic answer.

"What do you do?"

"Oh! I own the mill," and getting his change he bade the specialist good-day and went back to Renfrew.

C. Hiebert has sold his lumber yard at Carstairs, N.W.T., to Hunter & DeFehr, and that at Didsbury, Man., to Kirkpatrick & Company.

A test was recently made of the tensile strength of a woven belt manufactured for driving machinery. The belt was 5 inches wide, ¼-inch thick. It stood a pull of 11,200 pounds, or a gross ton per inch of width.

DEFINITION OF LUMBER TERMS.

The following letters regarding the meaning of the terms "Mill Run" and "Mill Run, Culls Out," have been received since our last issue went to press:

John H. Eyer, wholesale lumber merchant, Toronto: "I should judge from the three questions asked that all would terminate in one, namely, the designation of mill run, mill culls out, which is practically common and better. Where a contract reads 'mill run' as stated, I should take it that the mill culls would be out and the better in."

J. T. Schell, Alexandria, Ont.: "As there is no law covering the matter, the culling of lumber is a matter of custom and judgment. Hardwood mill men of experience know the grading fairly well, and hardwood buyers and dealers also know the grades or their experience will soon teach them. Firsts and seconds are understood to be according to either the American or Canadian classification. Common and culls sometimes are confusing terms to the mill man or buyer of limited experience. "Dead culls" in hardwoods have no value and are not considered as part of any deal under any classification. In answer to questions 1 and 2 I would say: "Mill run culls out" means all the firsts, seconds and common as produced by the mill, but does not include any culls. I would suggest a better term to be "common and better," the product of the mill, instead of "mill run culls out," as the latter term gives room for more difference of opinion with reference to the word "culls." (3) "Mill run" means the product of the log "dead culls out." "Dead culls" having no place in hardwood culling the term "culls" refers to all merchantable lumber under the grade of common. I would not undertake in a letter to define the difference between a "common board" and a "cull board." Parties buying and selling upon customary terms of the trade must conform to the customs of the trade. Neither party to a dispute may insist upon their opinions, arbitrarily, and expect to settle their differences. While laws may be framed defining culling, they must necessarily be subject to interpretation when grades such as "common" and "culls" are used. Knowledge, experience and custom will rule in cases of customary terms, and even the judicial decision would in such cases be dependent upon expert evidence. The opinions above given are the results of my experiences as mill man and buyer for the past 25 years, and are after all simply an opinion not covered by any arbitrary or legal enactment.

SUIT TO RECOVER VALUE OF SHINGLES.

In the County Court at Ottawa argument was heard recently in a dispute between Hurdman & Elmitt, of that city, and Fee & Son, of St. Hyacinthe, Que., arising from the sale of a car of shingles. The latter sued for $147, the price of the shingles. Some time ago Hurdman & Elmitt ordered the shingles for a customer named McDonald, and when the shingles were delivered McDonald refused them, contending that they were defective. The chief objection was the imperfect way the bundles were bound together. The binding nearly all gave way during the unloading, and it was held that it would cost fifteen cents a thousand to put the bundles in proper condition. Mr. Hurdman unloaded the shipment expecting an adjustment of the price from the shipper. The shingles were subsequently burned in a fire which swept across the district last spring.

Fee & Son claimed the full price of the shipment on the ground that the purchaser accepted the shingles by unloading them. McDonald, for whom the car was ordered, is not in the country, and his evidence, though important, was not procurable. Judgment was reserved.

The Shelvin-Clarke Company are building a large saw mill at Fort Frances, Ont. The mill will be one of the largest in Western Canada and will give employment to about 600 men. The ratepayers of the town voted unanimously in favor of fixing the rate of taxation on the property of the company at a flat rate of $35,000 for ten years. J. A. Matthews is manager of the company.

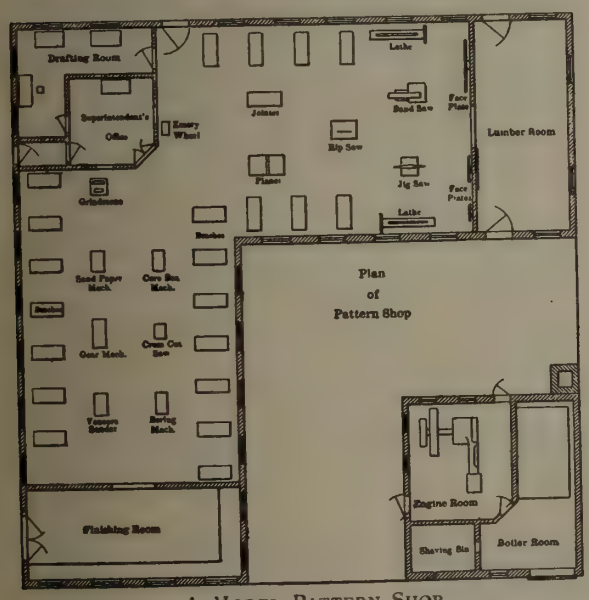
A MODEL PATTERN SHOP.

In a paper read before the Milwaukee meeting of the American Foundrymen's Association, Joseph Leon Gobeille, discussing the arrangement of the best modern pattern shop, said:

The building is important; the plant and the placing of the tools more important, and, most important of all, the system of work and management. As it is not easy to describe a building in words, a drawing has been prepared which approaches almost perfectly to all requirements. It must be light throughout—no dark centers, as in a square room. It admits of supervision in its entirety from the foremans' table, and is not too wide to permit of doubling up men on a big pattern—a matter of some moment on a hurry job. The shop should be a single-story detached building, or, if storage is needed, have the shop on the top floor, plenty of light, good heating by hot-water system, sanitary arrangements and fixtures of the same quality as you would order for your own home. Pure water, ice and the best castile soap should be provided free, and a room set aside and furnished with bandages and other things needed in "first aid" emergency.

A 4-inch standpipe should be erected, with a y, to which is connected coils of 2-inch hose for use in case of an incipient blaze. Of course, no fire will be allowed anywhere in the shop; your glue pots will be heated by steam and your artificial light must be electric.

Your lumber room is constantly replenished with air-dried, ready-to-use lumber. This lumber should be stood on end, i. e., the planks racked vertically, turning each end for end every ten days. Now that lumber is so large an item of expense, careful grading will be necessary. White pine is still preferable, even at the price, but maple, poplar and whitewood



A MODEL PATTERN SHOP.

can be substituted in places, especially for segments and framing.

You will note that the lumber room is at one end of the first wing, the varnishing room in the same position on the other wing, and the tools are placed so as to permit of consecutive operation from start to finish, thereby saving time in retracing steps and re-handling material.

A combination rip and cross-cut saw comes first; next in line, a 24-inch joiner to get one side of the plank true and out of wind; then the planer, to reduce to the required thickness—notice that the band and jig saws are next in line; then the segment machine and various lathes.

In placing machines pay particular attention to "clearance." A cross-cut saw must admit of one foot being sawn off from either end of a 16-foot plank without collision with another tool, operation or workman. A jointer or rip saw must allow for working up to 16 feet long and 24 inches wide under similar conditions. A large cast-iron surface plate is very handy for starting frames, housings or any large work which must be absolutely level.

I believe the hand or bench trimmer is a detriment to rapid work, and I have had as many as fifty in operation, only to be finally abandoned. A better device is the power face-plate with plain angle gage. I cannot name the best tools, of course, but some of the best advertised saws, lathes, etc, are unsatisfactory.

There is no good pattern-making glue pot on the market. I have designed a twin steam pot which is all right if connected with a sewer to draw away the product of condensation; it is operated by live steam and admits of one pot being used on a job or on the bench without the cooling of the other, an important trifle.

A segment machine is a great time-saver. A boy at $1.25 per day will "lay up" and glue 100 courses of six segments each for a day's work—about what eight journeymen would do on chute-boards at 35 cents an hour. No such machine is, however, on the market.

Of course, if you make only a few gears you will need a gear cutter. There is none on the market; we had to make ours, which is the only one I know of that actually turns out either involute or epicycloidic gears without skilled labor to handle it. Any bright boy can run it. It is thought to be worth 50 cents an inch of "diameter plus face" to make teeth in hard wood for ordinary spur gearing by skilled handwork at 40 cents per hour; this is honest and perhaps exceptional output. This machine will cut gear teeth for 2 cents an inch.

A core-box machine is a money-saver. There is one on the market which is pretty near perfection.

There is no larger joiner on sale than 24-inch. I have found that 40-inch is a low limit, and some day shall cut our patterns to make a 60-inch. In large turned work—especially when laid up on a segment machine—a big joiner will surface courses for a fraction of the cost when done on the lathe the usual way. If your foreman has the practice of doweling his segments—a commendable habit—then you need a dowel machine. A good one costs only about $50.

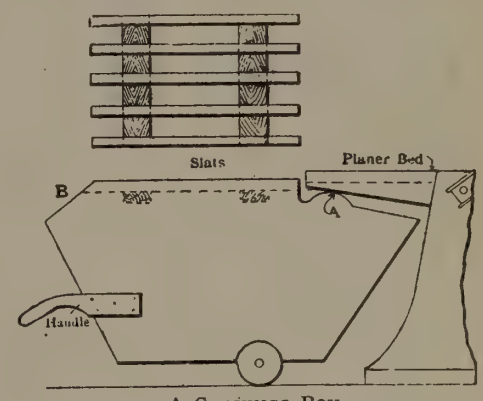
For many years it was a problem to get out large turned work. Anything heavy over 10 feet diameter would chatter. I show a photograph of a big face-plate hung from oak timbers 12x12, which are built into the end wall of the building; this works perfectly and handles anything up to 22 feet diameter.

There is nothing so good as the wooden fillet, but leather and lead are cheaper. A flexible shaft suspended above your housing table, with, say, five sizes of round rose cutters, will work the finest fillets in a pattern you ever saw, and do it out of the solid. The same rig makes a good sandpapering machine for curves and corners.

Three grindstones are absolutely necessary: one medium, one fine-grain—flat and in perfect condition for planes, chisels, etc.—one medium-grain for gouges and curved blades. A planer bit grinder, automatic saw set, brazing kit and an air-brush varnisher will about complete your inventory of necessary tools.—American Machinst.

A SHAVINGS BOX.

With a cheap shaving box, as shown in the sketch, heaps of shavings around a wood planer and scattered all over the shop, can be



A SHAVINGS BOX.

avoided, says a correspondent of the American Machinist. It answers two purposes: to catch the shavings and as a table for lumber. It is mounted on wheels so placed that the handle end is heaviest; this keeps the other end up to the planer bed at A, and it is free to move up or down with the bed. The slats are made of hardwood 5/8-inch thick and 1½ inches wide, spaced to allow shavings to drop through and leaving an opening at B for shavings scraped along with the lumber. When sweeping up the shops the slats can be removed and the sweepings can be put in the box and carted away.

SEASONING HARDWOODS.

It is claimed for a seasoning process recently introduced by an English company, that hardwoods green from the saw may be made fit for conversion into joinery in a week. The London Timber Trades Journal says of the process: The wood is treated in a specially constructed stove with superheated steam at atmospheric pressure for a time varying from 10 to 40 hours, according to the kind and thickness of the timber seasoned—softwoods with an open tissue taking from 10 to 18 hours, while harder and closer woods take from 18 to 40 hours. The process is extremely simple and inexpensive; no skilled labor is required; exhaust steam may be used (being superheated), and the cost, including filling and emptying the stove, does not, it is said, exceed 4 cents per cubic foot, and is often as low as 2 cents, whereas the cost of natural seasoning is never below 9 cents, and is frequently as high as 12 cents. The timber may be used for making into joinery immediately it leaves the stoves, without any fear of shrinkage, warping or twisting, and can be planed quite as freely as when naturally seasoned.

BIRD'S-EYE AND PLAIN MAPLE.

The following article appeared in a recent number of the Railroad Gazette, written by E. C. Hargrave. It contains a number of things of interest to readers of THE LUMBERMAN.

Bird's-eye maple is found growing with other kinds of maple. The best bird's-eye or that in which the eyes are closest together and most distinctly marked, is generally found growing where the ordinary or common maple is of poor quality, that is, contaning a large number of knots.

It is now the practice in lumbering maple for the bird's-eye maple to be first selected and shipped to veneer cutting mills. This sorting out or selecting of bird's-eye is done by men skilled in the business, who go through the standing timber and mark the bird's-eye maple trees. It is claimed by some good judges that they can tell a bird's-eye maple tree at a distance of 100 yards, some even claim to do it at a greater distance, but the writer thinks a number of trees would be missed at so great a distance.

A bird's-eye maple tree is told by a difference in the habit of the tree. It tapers more rapidly and the trunk is not relatively as long as that of the ordinary kind. It is also told somtimes by the looks of the bark; the bird's-eye maple pits or marks being distinctly seen on the outside of the bark. If there is still doubt as to whether the tree is bird's-eye maple, a blow with an axe will remove some of the bark and after that is done there can be no question, as the surface of the tree after the bark is removed, clearly shows the bird's-eye marks.

It will be noticed that the eye ot the bird's-eye maple cannot be any kind of a knot, for the reason that the knot always bends the grain of the timber towards the surface, while bird's-eye always depresses the grain towards the center of the tree.

After the bird's-eye maple trees are selected they are cut down and sawed in logs and shipped to the veneer factories where they are to be used. It is also customary, where maple logs are got out, for the buyers of bird's-eye maple logs to look over the rollways or piles of logs and select the bird's-eye maple logs. When the logs are piled in huge piles or rollways only the ends ot the logs can be seen, and these clearly show whether they are bird's-eye or not.

Aside from the logs shipped to the veneer mills there are a few for various reasons that reach the saw mills and other factories. It may be that because there are too few bird's-eye maple logs in the timber to pay to separate them or it may be that the eyes are too scattering, or that they are only on one side of the log, that is, they appear in too small a section to pay to cut it into veneers. It is strange, and no reason can be given for it, but sometimes the eyes will only appear on one side of the tree, may be only one-half or one-third the way around it. If such a tree is cut into veneers, only one-third or one-half of the veneer will show bird's-eye marks.

Many maple logs are used for the manufacture of toothpicks and for articles such as butter dishes, baskets, etc. In making these the log is first cut into veneers. The best and straightest grained is then put through machines that plane it into round strips the size necessary for toothpicks, and the poorer grades are cut into such forms and sizes as will make the desired dishes or baskets. All logs are not suitable for this work.

In what is known as a cross-grained log or tree, the grain travels in a spiral, diagonally up and around the tree. If such a tree could be seen with the bark off, it would look as though the tree had been grasped by the top and twisted. When such a log is cut into lumber or veneer the grain runs diagonally across the piece and it will easily split, making it unfit for veneer that is to be bent, or for toothpicks. Another type of log or tree is not suitable for toothpicks. This may be a tree containing a good quality of timber, with a straight grain, and in every other way suitable to cut into veneers, but the log is hollow, and there is no way to hold it so as to turn off the sheets of veneer.

Timber in which the grain runs irregularly or in waves, out and in, is poor material for veneer, for if a piece of veneer is cut from such a log, and but slightly bent, breaks will appear all over the surface. Practically all kinds, qualities or shapes of logs can be handled and cut up in the saw mills.

Considerable skill and care is necessary to properly saw the logs that come to a saw mill, and it is strange to see how few mills handle the logs to the best advantage so that the lumber obtained from them will be of the greatest value. All hard maple, whether bird's-eye, curly or with ordinary grain, grows with the center of the log or tree of a reddish or brownish color, and the outside almost clear white. The reddish or brownish part of the timber is the oldest part where the sap has stopped circulating, and is known as the body timber. The white is where the sap still circulates, and in the trade is always designated as 'the sap.' The proportion of white or dark timber in the log varies greatly.

The difference in the color of the timber plays an important part in the value of the timber sawed therefrom, and therefore in the sawing of all maple logs. A piece of bird's-eye maple, or ordinary maple lumber that is cut from the sap wood, is worth from 50 per cent. to 100 per cent. more than if sawed, all or in part, from the heart of the log. The value of the lumber coming from a maple log will decrease as follows:

The most valuable of all, white bird's-eye.
Brown or partly brown bird's-eye.
Plain grained white maple.
Maple squares, i. e., 4-in. x 4-in., 5-in. x 5-in., etc.
Clear thick maple, 2-in., 3-in. x 4-in. thick or over.
Clear thin maple.
Common grades and culls.

"Squares are pieces of lumber 4-in. x 4-in., 5-in. x 5-in. or 6-in. x 6-in., sawed out of the good part of the log. It is difficult to obtain a large square free from defects and also very difficult to dry and cure, without checking so badly as to materially lower its grade and value.

"If we saw up an ordinary maple log the surface of which showed no knots, we will find that the lumber on the outside of the log is free from knots, but as we get into the heart of the log knots will appear and will grow more numerons and larger the nearer we approach the center. The heart is always very defective and of comparatively small value. In sawing such a log, the sawyer after taking off a light slab, then a 1 inch sap piece, would then estimate to the best of his judgment, how thick a board or plank could be sawed that would be all white and show none of the darker timber. He must exercise great care, because if he saws off too thick a piece or it cuts into the darker timber, so that part of the board or plank is dark, it spoils the piece of white lumber, and reduces the value. Again, should he saw a thinner piece than could be easily obtained, he leaves more white maple than is necessary on the log to be cut off with the next piece of lumber which is of a much lower value. After cutting off as much white maple as is prudent, he then estimates how thick a piece can be sawed off without reaching into the knots or defects, and thus lower the grade of the thick piece. Here again judgment is required, if he cuts off too thin a piece and leaves part of the good lumber on the log, it will afterwards become part of a poorer piece of lumber, and if he cuts it too thick it reaches into the defects so as to spoil its quality.

As before suggested it is very difficult to dry squares so that they will not check to an extent that will lower their grade, if not entirely destroy their usefulness for the purposes intended. For this reason very few mills will attempt to get out lumber of these dimensions. Lumber over 2 inches thick is very difficult to cure without checking and increases in difficulty very rapidly as it gets thicker.

LUMBER INSURANCE AT REDUCED COST

Pennsylvania Lumbermen's Mutual Fire Insurance Co.

632 Drexel Building - - PHILADELPHIA, PENNA.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 32 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING, MONTREAL
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman — A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p.m. on Tuesday to insure insertion in the current week's issue.

WANTED

500 2 in. x 6 in. Red Pine to be manufactured next season; also few Cars for spring delivery.

HURDMAN & ELMITT,
Ottawa, Ont.

WANTED—MAPLE STRIPS, 2½"x2¼", 30" long. Ship green during coming winter. Apply Box 9, CANADA LUMBERMAN.

For Sale

PINE AND CEDAR SHINGLES, XXX 6" C. B. and X; 2 to 3 cars 12"x12"-16, 18 and 20 feet hemlock, 2 million 1" and 2" hemlock. A. MCPHERSON CO., Longford Mills, Ont.

Circular Saw Hammering

taught right in your mill by mail. No previous experience necessary. Sent prepaid on trial. Send for Canada references, who are cutting frozen timber with my gauge and instructions. J. H. MINER, Lumberton, Miss.

MAPLE LUMBER WANTED

I AM OPEN TO PURCHASE LARGE OR small quantities of Hard Maple Lumber, sawn 1, 1¼, 1½, 2, 3 and 4 inch. Grade to be common and better. Terms cash when shipped. Mixed carloads taken. Millmen will please state the quantity they have of each thickness, with their lowest price. Also say how long sawn. Address care BOX 22 CANADA LUMBERMAN.

WANTED—1" SPRUCE, LOG RUN, DEAD-culls out. Tamarac sawn to order. Hardwood lumber. R. E. KINSMAN, Hamilton, Ont.

FOR SALE

CEDAR AND TAMARACK; 200,000 ties and 20,000 telephone poles on the Vermillion River or drove to Spanish boom. JAMES MCCREARY, Larchwood, Ont.

WANTED—POSITION IN LUMBER BUSINESS by young man 27 years old; ten years' experience in operating, manufacturing buying and selling lumber; can survey all kinds of spruce cargoes for foreign trade. Address P. O. Box No. 9, North End, St. John, N. B.

FOR SALE

Large Tract of Timber

THE PROPERTY OF

The Canadian Land and Immigration Company of Haliburton, (Limited)

This company has a larger tract of well timbered land about 125 miles north-east of Toronto. There are large quantities of Cedar, Hemlock, Spruce, Balsam, Basswood, Cherry Birch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads. The Company are prepared to sell this timber in blocks ranging from 2,000 to 10,000 acres, or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and looking for a new location.

Maps and plans and further particulars can be had by applying to

W. H. LOCKHART GORDON,
Managing Director,
157 Bay Street, Toronto.

AUCTION SALE OF TIMBER BERTHS

PUBLIC NOTICE IS HEREBY GIVEN THAT pursuant to authority of Orders in Council, the Red and White PINE TIMBER in the following townships, berths and areas, namely:—

IN THE DISTRICT OF NIPISSING — the Townships of HUTTON, CREELMAN, PARKIN, AYLMER, MACKELCAN, MCCARTHY, MERRICK, MULOCK (part of) FRENCH (part of), STEWART, LOCKHART (part of), GARROW (part of), OSBORNE (part of), HAMMELL and PHELPS (part of).

IN THE DISTRICT OF ALGOMA — Berths Nos. 159 and 201, the Townships of KITCHENER and ROBERTS, and Block "W" near Onaping Lake.

IN THE RAINY RIVER DISTRICT—Berths G19, G21, C23, G29 and G38, and the following Berths with the right to cut and remove the pine, spruce, tamarack, cedar and poplar:—G4, G6, G17, G18, G24, G25, G26, G27, G28, G33, G35, G36, G37, G39, G40, G41, G42, G43, Berths Nos. S1, S2, S3, and S4, will be offered for sale by Public Auction at the Parliament Buildings, in the City of Toronto, on WEDNESDAY, the NINTH day of DECEMBER, 1903, at the hour of ONE o'clock in the afternoon.

Sheets containing terms and conditions of Sale and information as to Areas and Lots and Concessions comprised in each Berth will be furnished on application, either personal or by letter, to the Department of Crown Lands, Toronto, or the Crown Timber Agencies at OTTAWA, SAULT STE. MARIE, PORT ARTHUR, RAT PORTAGE and FORT FRANCES.

E. J. DAVIS,
Commissioner Crown Lands.

Department of Crown Lands,
Toronto, July 29, 1903.

N. B.—No unauthorized publication of this advertisement will be paid for.

FOR SALE

WHOLESALE AND RETAIL LUMBER Yard; small band saw and planing mill; steam dry kiln; unlimited supply of both Pine and Hardwood timber; water and rail transportation; healthy locality; prosperous town in the South; 12,000 population; cheap labor; established paying business. Write for particulars. GEO. T. HOUSTON & CO., Chicago, Ill.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

WANTED—ONE PAIR TWIN ENGINES 10" x 12" or about that size, for medium weight rotary carriage. Advise by whom made, how long used, and price f.o.b. cars. J. & C. HICKMAN, Dorchester, New Brunswick.

WANTED

GOOD CEDAR LUMBER SUITABLE FOR boat building. PETERBORO CANOE CO., Ltd., Peterboro.

ADVERTISERS ARE PREPARED TO CUT to order during the coming winter a quantity of prime hard Maple and Birch any special thickness. Box 36, CANADA LUMBERMAN.

FOR SALE

FACTORY FLOORING

KILN DRIED BIRCH, ABOUT 60 M. BOX 442 CANADA LUMBERMAN.

TIMBER LIMIT FOR SALE

ONE HUNDRED AND FIFTY MILLION feet of good sound healthy timber. About 10 million white pine, 80 million cedar; balance hemlock. For particulars apply to P. J. GALLAGHER, Rossbery, B. C.

FOR SALE

SEVERAL LARGE TIMBER LIMITS ON the Kootenay Lakes and along Crows' Nest line of C. P. R. Most available timber for Northwest trade. For particulars, apply to D. I. DEWAR, Nelson, B. C.

SOFT ELM LOGS WANTED

10 OR 15 FEET LONG, SUITABLE FOR Cheese Box Veneers. We are open to buy any quantity on cars, on line of Canada Atlantic Railway. MACPHERSON & SCHELL, Alexandria, Ont.

Logs For Sale

5,000 GOOD LOGS, MOSTLY WHITE PINE 16 feet long, now running into the mouth of Spanish River at Georgian Bay. Also Limit for sale with or without saw mill. Limit and saw mill located on C. P. R. main line. PINE LUMBER COMPANY, Cartier Ont.

WANTED

1 INCH SPRUCE LUMBER, EITHER IN long sections or cut up to the following sizes:
1"x2"—2 ft. long.
1"x3"—1 ft. 1 in. long
1"x1½"—1 ft. long.
½"x6"—1 ft. 1 in. long.
½"x4", 5", 6" and 7"—1 ft. long.
1"x12"—1 ft long.

Parties quoting prices for these dimensions will understand that the spruce must be clear; also mention what quantity can be supplied in each case. Address

UNITED FACTORIES LIMITED,
Newmarket, Ont.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

WANTED — TWO CAR LOADS DRY quarter cut white or red oak, cut 1¼" x 2" and 1" x 3", 4, 8, and 12 ft. long, clear stock. Address, "W", care CANADA LUMBERMAN.

FOR SALE SAW MILL AND ONE hundred acres of land; about 80 acres of well mixed timbered bush, including 20 acres of cedar swamp; situated on country road, four miles from Angus station. Address J. D GREENLEES, Alliston, Ont.

WANTED—TO PURCHASE A PORTABLE Saw Mill, must be in good order; state capacity; or would contract with the owner of a portable mill to cut logs by the thousand feet in Province of Quebec. Several years cutting of hard and soft woods. Apply to "W.D.," P.O. Box 466, Montreal.

CURRENT TRADE CONDITIONS.

ONTARIO.

The buying of small lots of lumber which has been so general during the past month is palpable evidence that retailers and consumers throughout the province are not heavily stocked. It may be that the exceptionally fine weather is responsible for a larger consumption in outdoor work than was anticipated, but the many requests for early delivery would seem to indicate a sold-out condition. Accordingly, firmness of prices has ruled. The predicted reaction in white pine values is still confined to the higher grades, which, as stated last week, were perhaps selling relatively too high. And even these grades are showing strength, for from Ottawa comes the information that the 1904 cuts of the McLachlin mills at Arnprior and the McLaren mills at Buckingham have already been contracted for, and rumor says at an advance over the prices of the past year. There have also been some negotiations for blocks of Georgian Bay stock to be sawn next season. The lower grades continue to be in steady request. A few days ago 2,000,000 feet of log run pine changed hands at fifty cents over the price at which the same grade of lumber sold last spring. The average price of log run at the mill is $18, shorts from $11 to $14, box $14, and scoots $5 to $6. Very few of the mills have any stock of mill culls or box lumber for sale, so great has been the demand.

Hardwood buyers do not take everything offered without discrimination, as they were disposed to do earlier in the year, but they are still buying for customers and picking up lots on speculation whenever the price is an inducement. No weakness is visible in any of the hardwoods.

It is difficult to make sales of lath and shingles. Shipments of such material to the Eastern States have fallen off of late, and the trend of prices is towards a slightly lower basis.

QUEBEC AND NEW BRUNSWICK.

Values of spruce lumber continue remarkably firm. Manufacturers are holding out for higher prices for next season's production, and if the demand from the United States and Great Britain should be nearly as active as during the past season, it is quite probable that they will succeed in their efforts to establish a higher selling basis. Some contracting has already been done, but as a rule shippers are pursuing a cautious policy until matters in Great Britain become more settled. New York is absorbing a large quantity of stock. Cargoes arriving there have been readily taken at firm prices. Some mills are getting an advance of one dollar per thousand for large sizes, which are particularly scarce.

UNITED STATES.

The buying of lumber in the United States has been confined almost exclusively to actual needs, yet the volume of business has been sufficient to create the impression that a very fair trade will continue throughout the winter months. While there is not likely to be a further general rise in prices, it is equally certain that no material slump will occur, so that those in need of lumber are disposed to place orders at current prices. Reports from the Lake Superior district are of an encouraging character. Recently there have been large sales of factory lumber and low grade boards, which have been shipped in large quantities as far east as New York. The stock of these grades at the mills is almost exhausted. Other grades are held in moderate quantity, excepting selects, of which there is an accumulation. There is a considerable supply of No. 3 boards at interior mills at the head of Lake Superior, but on Lake Michigan there is not much of that class of lumber that has not passed out of first hands. Eastern buyers have been persistent in demanding lower prices from the western manufacturers, but up to the present time the latter have not seemed disposed to yield. Hemlock piece stuff occupies a unique position, the supply being less than in any previous season. Conditions favor high prices for this class of lumber, although it is a question whether manufacturers will consider it advisable to make an advance.

Hardwood stocks are low and the indications point to a steady market with an advancing tendency, as there will doubtless be a pronounced scarcity before the large mills commence operations next spring.

Shingles and lath are slightly weaker. The Wisconsin and Minnesota mills are said to be carrying an abnormal supply of lath.

GREAT BRITAIN.

The high prices asked for next season's production of lumber are having a strengthening effect upon the British market. Importers refuse to dispose of present holdings at a sacrifice until they feel reasonably certain that they will be able to replenish their supply on favorable terms. The resumption of work by the cotton mills has stimulated the consumption, but reports still tell of an irregular demand. A Manchester writer says that it is remarkable how prices keep on advancing, especially in spruce deals. Very stiff c.i.f. prices are now being asked, and it is very likely that spruce may go up ten shillings per standard more before the winter is over. Three inch by seven inch are very scarce and dear, a large line having recently been sold at two shillings six pence per standard more than an average of a cargo could have been bought for a short time ago. There is also a scarcity at Manchester of 2½ x 7 inch spruce. At the last auction sale first quality Quebec spruce brought £12 per standard, which is rather below the previous sales. Third quality spruce brought £9 10s and fourth quality £8 10s. There is brisk competition for the best quality of pine lumber, but the lower grades are not in great demand.

There is much speculation as to the prices that will rule for first-open-water shipments next spring. Very little buying has as yet been done, the disposition of the importers being to delay as long as possible before closing contracts in the hope of being able to form an idea as to the prices which are likely to rule. At the present time opinion is greatly divided, some contending that higher prices may be obtained, others that it will be necessary to reduce prices in order to faciliate buying.

STOCKS AND PRICES.

The Kinmount Cooperage Company, of Kinmount, Ont., have two camps in the woods getting out elm logs.

The mill of the Saginaw Lumber & Salt Company at Sandwich, Ont., has laid off its night crew and will carry over less than 3,000,000 feet of unsold lumber.

W. Sleeman, of Rapid River, Ont., has just signed a contract with the Canadian Northern Railway to get out 100,000 ties between Emo and Rainy River.

The Canadian Northern Railway have built a spur line into the Little Turtle Lake District of Manitoba, in order to get out 150,000 ties which were cut last season by A. R. Mann.

The Millar Lumber Company, of Pembroke, Ont., have about 300 men in the woods this winter and have already cut 150,000 feet of square and waney timber, besides a quantity of logs.

Logging operations along the line of the Quebec and Lake St. John Railway, in the Province of Quebec, promise to be brisk this winter. Contracts have been closed for the cutting of over 2,000,000 logs, and apart from this the Chicoutimi Pulp Company have contracted for 1,125,000 logs to be cut on their limits for the manufacture of pulp.

It is again reported that the Ross-McLaren mills at Barnet, B.C., are to resume operations at an early date. This mill when in operation is an important factor in both foreign and local trade.

Donald Fraser & Sons, of Fredericton, N.B., have now upwards of 2,000 men at work in the woods in the Tobique and other districts and before Christmas expect to increase this number by 500. Scott Bros., of the same place, are conducting operations on the Black, Keswick, and Magaguadavic rivers, besides several small camps on limits near Fredericton.

The shingle manufacturers of Wisconsin have adopted the following schedule of wages: Sawyers, double block, $3.25 to $3.00; sawyers, single block, $2.75 to $2.50; bolters, $2.50 to $2.25; knot sawyers, $2.40 to $2.00; packers, 10 cents to 8 cents. The various manufacturers at a recent meeting reported that they had manufactured this year about 588,000,000 shingles and there remained on hand about 178,000,000.

It is learned on good authority that the entire cut of McLachlin Bros., of Arnprior, for next year, has been purchased by E. H. Lemay, of Montreal. The cut is expected to be between 50,000,000 and 60,000,000 feet. Last year Watson & Todd secured the McLachlin production. It is also learned that the lumber cut of the Maclaren mills at Buckingham, Que., has been sold to a British firm.

The Dauphin Press states that the lumbermen in that section of Manitoba have commenced work in the woods. The Northern Lumber Company has established two camps at Pine River, Shaw Bros. two camps in the Riding Mountain, and T. A. Burrows two camps in the Duck Mountain. The Red Deer Lumber Company has several camps at Erwood, while Robert Machan has secured the Dauphin Lumber Company's limit in the Riding Mountains and intends cutting lumber with a portable mill this winter.

The Canadian Northern Railway have placed the following contracts for material to be got out during the coming winter, principally in the Rainy River district: Preston-Bell Company, 1,000,000 ties; R. Lockhart & Co., Fort Frances, 100,000 ties; L. Christie, 100,000 ties; W. Sleeman, Rapid River, 100,000 ties and 500,000 telegraph poles; Holmes & Langstaff, Devlin and Emo, 50,000 ties, 50,000 posts and 50,000 telegraph poles; Graham, Horne & Company, Fort William, 1,000,000 feet of square cedar; Strevel & Company, Winnipeg, 250,000 ties.

THE BOSTON MARKET.

The situation in the spruce lumber market at Boston is strong. The supply of desirable sizes is extremely limited and from $1 to $4 up is being asked by the few holders. Many of the mills are shut down for the season, and others are held up on account of the lack of the rain necessary to bring the logs down to the saws. Prices are largely nominal, owing to the small offerings. The quotations are nominally unchanged at: Ten and 12 in. dimensions, $21; 9 in. and under, $19; 9 and 12 in. random lengths, 10 ft. and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 ft. and up, $17.50; all other randoms, 9 in. and under, 10 ft. and up, $18.50; 5 in. and up, merchantable boards, $17; matched boards, $18.50@20; out spruce boards, $13@14; bundle furring, $17.

Hemlock lumber is quiet and unchanged: Boards, 12, 14 and 16 ft. stock, $14.50 for good eastern; Pennsylvania No. 1, $18.50 to $19.50; No. 2, $15 to $16.50.

Western pine lumber is very firm, with a quiet demand: Uppers, 1 to 2 in., $84 to $87; 2½ to 3 in., $92 to $97; 4-in. $96 to $100; selects, 1-in., $76; 1¼ to 1¾ in., $76 to $78; 2-in., $78; 2½ to 3 in., $84; 4-in., $86; fine common, 1-in., $67; 1¼ to 1½ in., $69; 2-in., $72; 2½ to 3 in. $80; 4-in., $82; barn boards, $23 to $33; coffin boards, $28 to $32.

There is a steady demand for hardwood lumber at firm prices: Quartered oak, $85 to $92; plain oak, $42 to $45; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $54 to $56; sap, $43 to $48; common, $39 to $45; brown ash, $41 to $44; white ash, $43 to $46; maple, $33 to $37; end dried white maple, $46; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; northern elm, $29 to $31.

Well-known brands of clapboards are firmly held, but some of Canadian make are offering lower: Extra, $44 to $45; clear, $43; second clear, $40; extra No. 1, $30.

Extra cedar shingles are firm at $3.35 to $3.50, with other grades steady.

Laths are firm and unchanged: One and five-eighths in., $3.40; 1½-in. $3.25.

TO HOLDERS OF BIRCH LIMITS.

Can you cut birch into Squares,&c. We can also take birch cut on the sweep with a jigger or small band saw. Large quantities required. Write in first instance to "Finance," c/o CANADA LUMBERMAN.

TELEGRAPH POLES WANTED

We buy all lengths. Write us for prices and you will see that by cutting your Cedar into Poles it will net you more than you can get out of it in any other way.

SALIENT FEATURES IN WHITE PINE.

It is well known throughout the trade that the most active stock of white pine in the market is the low grade stuff used for box making. It is also the class that is in shortest supply compared to the extent and urgency of demand for the higher grades of lumber. The qualities of white pine employed in box manufacture are included in Nos. 3, 4, 5 and 6, four inches and upward in width.

As a matter of fact there is no specific grade of box lumber ; it is simply coarse, common or cull stock and below the grade of No. 2. Such lumber is used more extensively in the manufacture of boxes than for any other kind of application, though every retail yard carries a qnantity of it, in all widths, to meet a demand that frequently arises. No. 3 in particular is considerably devoted to under flooring, roofing, building and repairing sheds, or for any purpose where cheapness is the object sought more than excellence of work. Coarse lumber is used in box manufacture because it is relatively cheap, and can be cut up so as to utilize all that is good in each piece. No. 3 is the favorite grade, because it can be cut up with the least waste in knots and rot. No. 4 comes next in desirability ; No. 5 is a more or less desperate resort, while No. 6 furnishes the last grab at a vanishing supply.

The grades sought by box makers depend on relative prices, the kind of boxes being made and other conditions peculiar to each case. This season the lower grades have been bought up as never before, because scarcity has been such and prices have been so high that manufacturers have been forced to take the lower grades or nothing.

Present wholesale prices of No. 3 white pine on a Chicago basis are $16 to $17 a thousand ; No. 4, $13 to $13.50 ; No. 5, $8.50 to $9, and No. 6, $6. At the same time No. 2 is selling at $19 to $20.50.

The present box lumber supply is lower than ever before known at the close of the season. Nos. 3 and 4 are practically out of first hands, while Nos. 5 and 6 are fast disappearing. It is thought that this almost complete exhaustion of the white pine coarse lumber supply must have a reflex influence on demand and prices of low grade shop lumber and the general market for medium quality white pine. The supply of all coarse stock from No. 2 downward having been exhausted, holders of the residue of better lumber will be inclined to insist on good figures for it. The only kind that now is in surplus is shop lumber, and the manufacturers have no doubt that it all will be wanted in the ordinary course of the coming year's manufacture. As for uppers, they are like wheat in store, or gold in the vault ; even better than that, like money at interest on good security, because this year's cut is getting dry and therefore more valuable. —American Lumbermen.

TIMBER LIMIT TRANSACTIONS.

Small & Buckler have acquired timber limits on the Fraser river, in British Columbia, and purpose establishing a saw mill at New Westminster.

Patrick Culligan, of Alpena, has just sold to the Rat Portage Lumber Company 4,000,000 feet of standing timber in Minnesota at $6.50 a thousand.

It is estimated that the timber limits in British Columbia recently acquired by the Rat Portage Lumber Company from the Harrison River Mills Company contain 600,000,000 feet of standing timber.

At Revelstoke, B. C., the other day Lammerst & Goldrick concluded the purchase of over 40 square miles of timber on the Duncan river from W. de V. LeMaistre, Cowan, Kinsman and associates. It was a cash transaction and the purchasers propose to erect a large mill at Nelson.

J. B. Dorfmann, representing United States capitalists, has purchased several blocks of timber land from James Dunsmuir, of Vancouver, B. C. By a recent purchase Mr. Dorfmann secured control of a solid block of timber land in the northern part of Vancouver Island. It is probable that for the present he will erect a portable mill near Nanaimo, where he has purchased a block of oak timber.

Scribner's Lumber and Log Book

A handy book for Lumbermen. Gives Correct Measurements of Scantlings, Boards and Planks; Cubical Contents of Square and Round Timber; Doyle's Rules, and much other practical information. . . . . .

Price 35 Cents

Address:

The Canada Lumberman
TORONTO, ONT.

COMMENTS ON THE LUMBER SITUATION IN GREAT BRITAIN.

The Belfast correspondent of the Timber News says: The consumption of spruce deals is large and increasing, and prices are fairly steady. There is but little doubt that the requirements in spruce deals will increase in Ireland before long, for on every side there is a disposition to put up new buildings and to touch up old ones, which will mean very shortly a decided increase in consumption of timber of all kinds.

The Timber Trades Journal: The pine market keeps up its strong position, and is likely to do so in the face that higher prices are again demanded by Canadian lumbermen. There is very little spruce on offer, and such few cargoes as are available for the West Coast are held for higher prices than were current a week or two ago. The output for the remainder of the season seems from all information we can gather from the other side, likely to be small, owing to the quantity of logs which are still hung up for want of rain. We have been favored in the frankest manner with the inspection of telegrams upon some spruce business, from which we gather that the shippers hold the whip hand, and our conclusion is that, so far from any retrograde movement being looked for in this market, everything points to an upward movement.

A Dublin correspondent: Quite a number of parcels of spruce, principally 7x3, are being dumped on this market by Quebec. Three such parcels are shortly due per "Malin Head," and as importers are already overstocked with this size, bought under contract, they are not disposed to look on favorably at this influx of oddments, which is causing marked depression in prices. In order to warn shippers against a repetition of this policy, the Irish Timber Importers' Association, at a meeting held at Dublin on the 21st. ultimo, passed a resolution to the effect that importers would not encourage the shipments of such parcels except contracted for in the usual way before shipment is made.

We are in the Market for:—

Rock Maple logs and planks
Rock Elm Logs
Waney Birch Logs
White Oak Logs
Cargo planks, best quality in long engths
White Ash planks, best quality, in long lengths
Black Walnut Logs and Boards
Pine deals and siddings

Send full particulars of what you have to offer with prices to

PERSONAL.

Hon. J. K. Ward, lumberman, of Montreal, has been appointed a member of the Council of Public Instruction of that city.

Mr. Walter Wilson, head of the firm of Walter Wilson & Sons, manufacturers of saws, St. John, N, B., died last month.

Mr. A. E. Alexander, the well-known lumberman, of Campbellton, N. B., is spending the winter in California for the benefit of his health.

Mr. Jonas Howe, the well known lumber cruiser, has returned to St. John, N.B., from British Columbia, where he spent several weeks in the inspection of timber lands on which New Brunswick capitalists hold an option.

Mr. J. F. Birchard, travelling representative in Canada for Messrs. J. T. Wing & Company, of Detroit, is receiving the congratulations of his many friends, having recently taken unto himself a wife from among the fair daughters of Toronto.

A beautiful wedding was celebrated in Toronto last month, when Miss Alice Irene Kemp, daughter of Mr. A. E. Kemp, M. P., was married to Mr. W. Scott Waldie, son of Mr. John Waldie, of the Victoria Harbor Lumber Company.

Mr. John F. McRae, for several years mill foreman for the Rat Portage Lumber Company, Rat Portage, Ont., has been appointed manager of the mill of that company at Vancouver, B.C. Before his departure for the west the employees of the mill at Rat Portage presented Mr. McRae with a gold watch, chain and locket, engraved with the words "J. F. McRae, from the employees of the R. P. L. Company's saw mill No. 1, Rat Portage."

Mr. Dalton Ullyot, a prominent retired lumberman and one of the most respected residents of Peterborough, died in that town on October 24th, in his eightieth year. About thirty-five years ago he commenced a large milling and lumbering business at Fenelon Falls, and also conducted a saw-mill business at Harwood, Rice Lake, subsequently becoming one of the largest shareholders in the North Shore Lumber Company.

An extremely pretty and fashionable wedding was solemnized in St. Andrew's church, Ottawa, on September 31, the contracting parties being Miss Isbester, daughter of the late James Isbester, and Mr. James Gordon MacLaren, eldest son of Mr. David MacLaren. Among the guests were a number of the leading lumbermen of the Ottawa valley. A reception was held at the home of the bride's mother, after which Mr. and Mrs. MacLaren left on a honeymoon trip.

Mr. H. Percy Jew, of Gloucester, England, arrived in Canada last month. Mr. Jew has been in the lumber business in England for a number of years and was connected with Price, Walker & Company. It is his intention to spend the coming winter in the camps selecting timber for the English market, and at the same time he hopes to gather considerable information regarding lumber and lumbering methods in Canada.

Mr. H. H. Spicer, of Woods & Spicer, Limited, shingle manufacturers, Vancouver, B. C., honored THE CANADA LUMBERMAN by a visit when in Toronto last month. He spoke hopefully of the arrangement which has just been made for the regulation of the shingle output of British Columbia, stating that almost every mill, large and small, had agreed to the proposed plan. Mr. Spicer called upon some of the many dealers in the east who handle their shingles, and intended visiting Boston and other Eastern States points before his return to the coast.

STEAM BOILER INSPECTION IN BRITISH COLUMBIA.

In accordance with the provisions of the Steam Boilers' Inspection Act of British Columbia, all steam boilers in that province must be regularly inspected, and engineers operating same must first pass an examination as to qualification. The first annual report of Mr. John Peck, Chief Inspector of Boilers and Machinery, covers the calendar year of 1902 and gives much information regarding the condition of boilers. The number of boilers inspected during the year was 860. Three hundred and twenty-one new boilers were inspected and put into operation and 57 boilers were taken out of service. The inspectors found 2,102 defects, 156 of which were dangerous. The defects are summarized as follows :—

NATURE OF DEFECTS.

	Whole No.	Dangerous.
Boilers without safety-valves	1	1
Boilers with safety valves inoperative	4	4
Boilers with safety valves overloaded	5	2
Boilers with safety valves defective in construction	69	16
Boilers without pressure gauges	1	1
Pressure gauges inoperative	44	2
Pressure gauges defective	158	2
Cases of insufficient staying or bracing	84	20
Cases of defective stays	3	
Cases of broken rivets	23	
Cases of defective riveting	38	5
Cases of broken stays or braces	8	
Cases of loose stays or braces	72	5
Boilers damaged by low water	5	3
Defective settings	70	7
Boilers with fractured plates	43	6
Boilers with laminated plates	17	4
Boilers with burned plates	73	5
Boilers with blistered plates	2	
Cases of sediment on fire sheets	44	2
Cases of internal corrosion	78	
Cases of scale or incrustation	214	22
Cases of internal grooving	5	
Cases of external corrosion	96	5
Cases of defective tubes	59	
Cases of defective feed water arrangement	121	
Cases of broken feed valves	1	
Serious leakage around tube ends	18	4
Serious leakage in rivet joints	88	2
Defective blow-off pipes or cocks	148	4
Defective water gauges	48	13
Broken blow-off pipes	3	3
Water columns without blow-outs	6	3
Cases of broken test cocks	11	
Connections to water columns without valves	7	7
Neutral sheets not stayed	55	
Neutral sheets improperly stayed	69	
Furnaces out of shape	2	
Boilers without fusible plugs	127	
Boilers low at front end	27	
Cases of serious leakage of fittings	40	
No. of hand-hole doors having bolts and dogs burned off	4	4
Leakage at hanger lugs	1	
Cases of battery of boilers having no check valves	1	1
Defects in engine frames (broken frame)	2	
Defects in engine cylinders (broken flanges)	1	1
Boilers without hand-holes	1	
Boilers without stop valves	22	
Cases of defective steam pipes	4	
Unclassified defects	79	2
	2,102	156

Concerning boilers in saw mills Mr. Thomas H. Goldie, Inspector for District A, says :

"Boiler No. 414 "A" is a 43"x14' return tubular boiler employed in a small saw mill for the purpose of supplying steam for main engine. A further duty was added to the already overtaxed boiler, that of furnishing a dry kiln with steam. This addition, however, brought things to a standstill, and the perplexed owner, who thought it a financial impossibility to purchase another boiler, set to devising some means of increasing the boiler capacity. An idea occurred to him that if he connected the bottom of the boiler to one end of the kiln, which was about four feet below the level of the lowest portion of the boiler, and the other end of kiln to steam dome, he would produce a steady circulation through both boiler and kiln. When everything was connected up the new scheme was tried with apparent success ; but the owner evidently did not reckon on the water in the boiler following the natural law of gravitation, and the boiler began to empty its contents into the kiln and out through the drain cocks, and before they were aware of it the boiler was empty with a fairly good fire under it. The fireman having discovered that steam was away down and that no water appeared in the glass, at once put on the injector, but luckily there was just enough steam to give it a start and no more. The fire door was opened to supply more fuel, and it was then noticed that the sheet over the fire was red hot. I was sent for and arrived next day. On examining the boiler, I found upper row of tubes sagged down ; circumferential seams over fire had pulled down about ⅛ inch past original position ; the rivet heads were curled up at caulking edge ; two of the sheets were bulged and cracked, and the boiler was rendered useless, besides running close chances of an explosion. The changes were effected without notifying the Inspector, who would not have allowed such nonsensical ideas to be carried out, and would thereby have saved the owners at least $1,000. This was the result of ignorance of common law."

"Another return tubular boiler was ordered to have blow-off changed from back head to bottom of shell, so that all dirt and sediment could be thoroughly cleaned out. The owners promised to have this done right away, but they carelessly neglected it altogether until my next visit, when I found fire sheet had bulged down 2½". After the hand-hole plates were taken off, the bottom of the boiler was found covered with a coat of heavy scale about ⅝" thick. The plate was cut out and patched. The original plate was ⅜" thick, but when a hole was drilled through crown of bulge it measured 1-16" thick, the material having thinned out this much, due to stretching while over heated. If the change asked for had been made at the time, this expense would also have been avoided.'

Mr. George O. Madigan, Inspector for District C, reports as follows :

"In one of the saw mills that was burned there was an old low pressure marine type of boiler 60" diameter, single riveted, ¼" iron plate, patched in every conceivable place, both inside and outside, that had been carrying 100 pounds and upwards. At the time of inspection the owners were informed that the pressure would be materially reduced, after allowing a reasonable time to get a boiler to replace it. Shortly after this the mill burned down, and after rebuilding a new boiler was installed, and when I went to inspect this I found the old boiler set up alongside of the new one, with a Dutch oven in front of it. I asked the owner he intended to use the boiler again, and he said he certainly did, as it had stood a good test while the mill was burning. He said he had watched the gauge until the hand had made a complete revolution to 200 pounds, and he did not know how much further it would have gone if the pin had not stopped it ; and he considered, if it could stand 200 pounds at that time, it surely would pass for 100 pounds. He felt quite hurt when I told him, after examining the boiler, that 40 pounds would be the most that would be allowed, even after damage done by fire had been repaired, as everything had been strained and would have to be tightened up."

"At another saw mill the boiler had head of dome, at flange, cracked two-thirds of the circumference and was pitted badly from lying on the damp ground exposed to the weather; the hand-hole in front head was eaten away almost large enough for a small boy to get into it, and was in bad shape generally. This was allowed to run for sixty days to enable them to replace it, after which it was condemned. It had been sold, with the understanding that it would carry 50 pounds, and the purchaser had gone to the expense of moving it and putting it in a good setting, firmly believing that the boiler was in good condition, and if there had been no inspection would probably have had a serious accident."

No wonder that a nigger sometimes breaks down, when he is steam fed and has no choice in the bill of fare.—Puget Sound Lumberman.

Smith Bros., Limited, are applying for incorporation, to conduct a general lumbering business, with headquarters at Central Blissville, Sunbury county, N. B. The promoters are George McKean, of St. John, and L. B. Smith, P. J. Smith and R. B. Smith, of Central Blissvale.

THE TROIS PISTOLES PULP AND LUMBER COMPANY.

The new saw mill of the above company is situated at Trois Pistoles, Temiscouata District, Quebec. The company was organized a year or more ago under the laws of Quebec, with a capital of $150,000. Its officers are : E. W. Tobin, M. P., president ; Christopher I. Gagnier, vice-president ; E. J. Murphy, secretary and treasurer ; Pierre Angers, manager ; and these, with Fred S. Morse and Fred J. Farley, of Springfield, Mass., constitute the board of directors. The company has 84,000 acres of virgin timber. The Trois Pistoles river courses through the tract, furnishing numerous important water-powers, two distinct waterfalls being 80 feet and 72 feet respectively, the latter fall being located just below the new mill. The plant is located on the banks of the river, about one and a half miles south of the tracks of the Intercolonial railroad, which latter is now preparing to build a spur track from its main line direct to the company's piling grounds in the rear of the mill, which, it is hoped, will be completed by early spring.

The mill is a large two-storey structure of wood, very heavily framed, and equipped with a band mill, eight up-to-date shingle machines and the usual equipment of live rolls, edgers, slashers and trimmers which go with an up-to-date lumber mill. They have also installed what is claimed to be quite a novelty in the form of a band bolt saw, in place of the usual circular saw ordinarily used for this purpose. It is said to be the first one of its kind installed in any mill in Quebec, if not in the country. The lower floor of the main mill is used exclusively for the shafting, with the section located under the shingle machines set apart for the use of the shingle packers. The second floor is equipped with the heavy machines.

The power plant is located in a brick building with corrugated iron roof and high stack, fitted with spark chamber and spark arrester as a protection against the possibility of fire. There are two Holyoke boilers of 250 horse-power each, and a 400 horse-power engine. A large steam fire pump and a Westinghouse electric motor complete the equipment of this plant. At present all refuse is carried from the mill to the boilers by a conveyor system, but later on a refuse burner is to be set up on the shores of the river in which all surplus refuse will be reduced to ashes. The plant is lighted throughout by electricity. The plant was started up on September 15, but there are yet several machines to be placed before it will be able to run on full time in every department. The product of the mill is to be handled exclusively by Fred. S. Morse, of Springfield, and will be shipped chiefly to the trade in New England and New York State.

THE "STANDARD" KILN.

The Standard Dry Kiln Company, of Indianapolis, Ind., have issued an interesting booklet entitled "Standard Users and Why." It explains the many strong points of the "Standard" moist air dry kiln and gives an extensive list of the firms who have adopted their drying system. Among these we notice such well-known firms as the British Columbia Mills, Timber & Trading Co. and the Pacific Coast Lumber Company, Vancouver, B.C. ; Victoria Lumber & Manufacturing Company, Chemainus, B.C. ; J. A. Sayward, Victoria, B.C. ; W. C. Edwards & Company and Davidson & Thackray, Ottawa ; J. P. Smith & Sons and J. C. Scott & Company, Toronto ; Schultz Bros. & Company, Brantford, Ont. ; Wilson Bros., Collingwood, Ont. ; The Meaford Manufacturing Company, Meaford, Ont.; J. W. Kilgour & Bros., Beauharnois, Que., and others. Many letters of praise from pleased users are reproduced in the booklet.

A USEFUL PAPER.

Messrs. J. & R. Miller, of Mount Elgin, Ont., in remitting their subscription to the LUMBERMAN and advising us that they are retiring from the lumber business, write : "We have taken the LUMBERMAN for many years and believe it to be one of, if not the best works published in the lumber interests. If we again go into the milling business, we will be happy to renew our subscription. Wishing you and your paper many years of continued prosperity.'

THROUGH MICHIGAN.

[By Our Travelling Representative.]

The United States customs officials at Detroit had hardly finished examining my "grips" before I was in conversation with a lumberman. He wanted to know all about the Canadian market. How was the cut coming up? Was there much pine left in the country? What was the chance for shoving in some yellow pine? Were prices going up or down, etc.? I hope I answered them all right, for this first interview seemed to be an awfully serious one made by a very serious man. But I soon found out that there was a certain feeling of uncertainty in the lumber market, with an independent air of expectancy as to a probable drop that did not exist at any other point that I had touched in recent days.

It got so that I could distinguish these undecided lumbermen by their abstraction. If I met one of them looking at the sidewalk or into vacancy, checking off mental items on his fingers, I only required two guesses to tell what was working on him. He either had troubles of his own at home, or he was a lumberman in the throes of expectation. For choice I accepted the latter explanation, for this is the time of year and this the longitude and latitude for uncertainty in lumbering circles.

McClure, Zimber & Company, the well-known hardwood lumber wholesalers, of Detroit, are known all over. They do a large export trade to Ontario, shipping ash, basswood, birch, butternut, cherry, mahogany, oak, walnut, etc., to furniture, wagon and piano factories. They make a specialty of oak and hickory poles, rims and spokes, oak bending plank, railway ties, etc. This young and enterprising firm are bound to get more and more of the Canadian trade, because they have the goods ready to deliver at a moment's notice. They know a good thing when they see it. That's why they are Hoo-Hoo.

I had the pleasure of meeting Mr. Arthur S. Nester in his elegant offices up in the Majestic Building. With his brother, Mr. T. Nester, they do a large business in pine, hemlock, cedar and hardwood lands. They do not operate limits, being content to sell the forest and let others do the lumbering. I am indebted to Arthur for much information concerning the northern peninsula of Michigan. He knows every mile of the territory.

Mr. C. A. Spalding, the well-known Detroit lumber dealer, told me he was going in for the Canada trade. He already does quite a business with Ontario retailers.

In the Union Trust Building I had the honor of meeting two well-known wholesale lumber dealers, Mr. Frank C. Bury and Mr. Mason A. Noble. Both these gentlemen are intent upon putting southern yellow pine into Canada, and as there is a large and growing demand for this class of lumber, they will no doubt soon get a big share of the business. Mr. Bury is a jolly good fellow and a nice man to do business with.

I drifted into Port Huron, and found it as pretty a place as is to be found along the lakes, although there is very little doing in lumber circles; the various woodworking and machinery industries are running full time. Canada looks a regular lumber country as viewed from Port Huron. On the Sarnia side miles of immense piles of lumber loom up to the view of the American.

At Port Huron, the Engine and Thresher Company make a line of portable sawmills and saw-mill machinery, whilst the Port Huron Manufacturing Company, under the able management of Mr. E. W. Wilson, is manufacturing saws.

It is ninety miles from Port Huron to Saginaw, and at the latter place I met many well known on the Canadian side as dealers and operators, such as A. D. Eddy and C. K. Eddy companies, who expect to start active operations again at no distant date. Morley Bros., A. F. Bartlett & Co., United Supply Company, Mitts & Merrill, and other machinery dealers do quite a brisk trade with the lumbermen. This trade is, however, getting more and more towards Canada.

I found Saginaw the same as of yore—wide awake and progressive—hardly as "wide open" as before, but still full of life. The city is too much spread out for one to grasp an idea of its real size, and being on a flat stretch, the streets are long and expansive, stretching far out into the country. Everyone talks lumber in Saginaw on the least provocation, and all go back with a yearning sigh to the good old days when the hum of the saw-mill was heard in the land. Now it is all a memory—a sweet memory of the past. Saginaw may even forget that it was once all swamp and pine forest not many years hence.

It is always a pleasure to meet the "boys" at Saginaw. Lumbermen are nothing if not jovial, and the Michigan men have nearly all a cheerful air about them. To be sure I "run into" an occasional one who was "too busy" to give even an ordinary greeting, but this sort are as scarce as hen's teeth, and well-known to the trade.

I had the great privilege of shaking hands with Michigan's Governor, General A. T. Bliss, the millionaire lumberman. He is a genial soul, and from a few minutes' conversation I had with him on the lumber trade, I found him a very agreeable gentleman. As he shook hands he noticed my black cat button, "Ah, I see you are Hoo-Hoo? I am not one yet, but a couple of my relatives are." I had a good notion to ask Governor Bliss how he viewed the expected migration next spring of 500 Michigan families to the Canadian North-west. But I thought that would be treading on dangerous ground and contented myself with some facts re the expected exodus. It is expected that fully five hundred families, numbering over two thousand souls, principally of French-Canadian origin, will leave the Saginaw valley in the spring to settle in Canada. These people have not prospered, although they are hard-working, frugal and industrious. The cause is that they prospered in the prosperous lumber days and when the mills closed down they were thrown into all kinds of menial labour.

Out at Mershon Station is situated the saw-mill and piling grounds of Mershon, Schutte, Parker & Company and the W. B. Mershon Company. The latter, under the able management of Mr. E. C. Mershon, has attained world-wide fame for their band re-saws. This line is their forte, and the name Mershon is a guarantee of the best and latest in resawing machinery. Mr. E. C. Mershon is not only an expert draughtsman, but an engineer of great ability. His master mind thinks out and puts into being the very latest improvements which have kept his re-saws to the fore-front. And, despite his busy life, he is a pleasant gentleman to meet. I accepted his invitation to dine with him at the Lumberman's Club House, and he there showed me where two companies had copied his machine. In the first case they had put in the cut of one machine, and described it by the description of an entirely different machine! In the other case it was really laughable. A machine made by the Mershons had a stand made too low for it, so two blocks of wood were put under it, and photographed that way. This machine was copied from one of these photos, and the two blocks were reproduced in metal on the imitation!

At the Club House the clerks and stenographers of the companies take their mid-day meal—the ladies being provided with a separate room. Everything is neat and clean, and the cafe is a great convenience to the staff.

Over at the big Mershon re-saw works I looked at the sales book. It just indicated 999 band saws sold. I remarked, "Why, that's Hoo-Hoo, isn't it?" The genial manager smiled and said, "It surely must be!"

The tendency in the lumber business in Michigan is rather conservative just now. Mr. Chas. H. Cowles, one of the very best authorities on the continent, and who is the able editor of the Saginaw Courier-Herald, said: "Logging operations in Michigan will be on a smaller scale this winter than usual, owing to trade conditions, the cost of logging being a big factor in the calculations."

Booth & Boyd are still running full blast. The two Messrs. Boyds are certainly wide-awake. I had the pleasure of an exhiliarting automobile ride with one of them, which has since set me wishing I owned one of the "red devils" myself. It was my second ride this season and the best.

The logs in Spanish River owned by the Michigan firms when sorted out at the booms totalled an output of over two hundred million feet. Mr. G. Wall, of Saginaw, had charge of the boom.

I met President Roys, of the Saginaw Lumber & Salt Company. They are operating five logging camps in the Georgian Bay district. He said they would get a moderate stock of logs in this winter, but not so large as last season. Their mill at Sandwich is running steadily and the entire output was contracted for early in the season.

Mr. J. D. Draper, lumber inspector, had just returned from Canada, where he had been looking over some limits.

There is still an occasional snap in timber lands in northern Michigan. It seems peculiar that a tract of land, which had been looked over a hundred times and set down as sold, has recently been "discovered" by H. P. Lindberg, of Manton, Mich. The tract covers 320 acres, part of it with an excellent quality of pine. As it was government land he at once filed a claim for himself and wife, paying therefor $800. A few days after he was offered $5,000 for land and timber.

Thos. Jackson & Company, of West Saginaw, are getting considerable lumber from Spanish River and Cutler, Ont. They use up large quantities of Canada white pine in their sash and door factory. Their new factory is a model of neatness.

The Palmerston Woodenware Company will get a million feet of logs from Ogenan county next season.

The coming winter, I was told, is the last season when there will be any lumbering to speak of on the Dead River, a stream which in its day has floated down millions upon millions of feet of some of the est pine that has ever been cut in Michigan. As a lumbering waterway it is now on the decline and next season will witness the end of any operations on a large scale.

Crawford & Sons, cedar operators at Cedar river, Menominee county, have had great difficulty in getting men to go to the camps. They have secured nearly 200 Italians and Hungarians from Chicago, having failed to secure enough men at the Soo. There are no more hardy Canadian lumber-jacks to be had even at a fabulous wage.

Although A. F. Bartlett & Co.'s large works at Saginaw were partially wiped out by fire, I hear they will shortly rebuild. They have a high place among the manufacturers of engines, boilers and saw mill machinery. Their well-known saw mill hogs and edging grinders are to be found all over the country from the Atlantic to the Pacific.

The Gordon Hollow Blast Grate Company, at Greenville, Mich., not only make blast grates, but edgers and trimmers, being one of the largest manufactories in the world. The Gordon Company have made Greenville famous.

There are three or four large companies still doing big business at Bay City and West Bay City, which, by the way, are two separate and distinct cities, divided by the Saginaw river. E. B. Foss & Co. and the Eddy Company, at the former place, have immense stocks and do a rushing business. Mr. Foss, I found, to be as genial as ever. The lapse of time does not seem to leave an impression upon him and he looks as young and debonair as ever.

Over at West Bay City the Bradley, Miller & Co.'s mill and yards showed great activity. They handle a great output in the course of a year.

I had the pleasure of meeting Mr. W. D. Young, of Young & Co., one of the largest maple flooring manufacturers in the state. He reports business as active as ever, with large sales.

Handy Brothers and the Wolverine Lumber Company seem to be thriving and are likely to push out into Canada this coming year for some of their pine stock.

From Bay City I went south again to Grand Rapids, the great centre of the furniture trade. Grand Rapids is called the "Furniture City," although 'tis whispered outside of the city that more furniture is made in Chicago. Of the truth of this I would not like to certify. Furniture is written large all over Grand Rapids and the buzz of the saw is heard on every side.

Mr. Chas. McQuewan, a wholesale dealer in hardwood and mahogany veneers, showed me some grand specimens of Tennessee oak and Mexican mahogany, used largely in furniture and piano work.

The Quigley Lumber Company make a specialty of all kinds of hardwoods and do an extensive trade. The Engel Lumber Company are also specialists in the hardwood line as well as large mannfacturers of hemlock lumber. This latter company have mills at Hard-

grove, Sharon, Hewitt Lake and Earl Siding, all in Michigan.

I had quite a talk with Mr. T. Stewart White, the affable president of the White & Friant Lumber Company. Mr. White is one of the pioneer Michigan lumbermen, and knows all there is to know of the conditions of the lumber market. He is credited with being the leading spirit in having the two dollar import duty put upon Canadian lumber, and thus tried to help the Canucks keep a good thing to themselves.

In the carving and moulding line, the Waddell Manufacturing Company, of Grand Rapids, are unsurpassed in that city. They make some beautiful carved newel posts and embossed and turned work.

The leading manufacturers of bank, office and saloon fixtures is the firm of Nachtgall & Veit, who are designers of special furniture and patterns.

In the machinery line this city ranks high. Among the more progressive firms are Perkins & Company, with their famous Columbia heading and shingle machines. The Friction Set Works, Fox Machine Company, Crescent Machine Works, Tidy & Marshall, Wilmarth & Morman, American Machinery Company, Waggoner Watchman Clock Company and the Gillette Roller Bearing Manufacturing Company are all leading concerns in their line who are pushing out for the Canadian trade. Nearly $129,000,000 worth of goods manufactured in the United States entered Canada during the fiscal year ending June 30th, 1903.

A rapid run on the "third rail electric line" brought me up to Muskegon, on the shore of Lake Michigan. Here is situated the large mills of Mann, Watson & Company and the Rodgers Iron Manufacturing Company, who make an adjustable log siding machine and a combination gang edger. In conversation with Mr. W. F. Chrystal, the obliging secretary of the Rodgers Iron Manufacturing Company, he showed me hundreds of testimonials received from users of their machines in all parts of the United States and Canada. Crawford & Son, at Cedar River, Mich., report that they can saw over one thonsand ties in ten hours with the Rodgers machine, and do excellent work, without any trouble whatever. The Atlantic Shook & Lumber Company say that the Rodgers adjustable log siding machine is far beyond their expectations. This company run 36-inch saws and have no trouble in slabbing logs up to 20 inches in diameter. They say it is the best in the world. Geo. Gordon & Co., of Cache Bay, Ontario, have one of the Rodgers combination gang edgers and they say it is not only fully up to expectations, but for sawing small cants it is the most economical and fastest machine on the market.

Barcus Brothers, of Muskegon, are manufacturers of circular saws, and do a large lumbering trade.

The Alaska Refrigerator Company at Muskegon Heights use up great quantities of lumber in a year. While I was there a cargo of 250,000 feet of ash lumber was brought in from Houghton, Mich.

In conversation with a well-known lumberman he said :—"Yes, we are importing Canadian pine, and we are also importing California pine. But we are also exporting Michigan hardwood lumber to California and other states. There have been heavy shipments of hardwood flooring from the upper peninsula to San Francisco, and being of slow growth it is valued as the best the country can produce." He also told me that many of the pine lumber dealers, since the pine petered out, have gone into hardwoods exclusively. The hardwood lumber and flooring plants at Wells, Cadilac and West Bay City are reputed to be the largest in the world.

Going down the shore of Lake Michigan I came to Benton Harbor. Here are a number of wide-awake lumbermen, including the Peters Lumber & Shingle Co., D. M. Nowlen & Co., W. P. Robbins and the J. B. Graves Co. The Peters Company have over three hundred of the Gillette roller-bearing trucks in their mills and yards. They appear to be particularly adapted for moving lumber.

Passing through St. Joseph, Mich., on my way to Chicago, I called on the Compound Door Company, large and progressive manufacturers of doors and patent lumber, under the able management of Mr. E. D. McConnell.

J.R.H.

A PROGRESSIVE INDUSTRY.

At Galt, Ont., there are some fine manufacturing plants, turning out machinery second to none in the world. Among those who are progressive and up-to-date is the firm of Clark & Demill, manufacturers of improved wood-working machinery. A visit to the extensive works of this company by our representative was taken for the express purpose of viewing the new machines recently put upon the market and destined to revolutionize the old-time methods in planing mills and other wood-working establishments.

The illustration we give represents a No. 24 variable self-feed rip saw with feeding gear and delivery roll. As their object is to lead in new and improved machinery, Clark & Demill have designed and built this machine to meet the requirements of furniture, organ, piano, buggy and chair factories, planing mills, and any place where there is a lot of ripping to be done; it will save its cost over an inferior machine in a short time.

The frame is of the most substantial construction, with ample length and width to form a rigid support for the table and working parts. The table is made of iron, planed true, and is well braced on under side, both length and cross ways, and has four anti-friction rollers, two before and two after the saw, for carrying the lumber. Size of table is 5′ long and 3′ 4″ wide, and will drop for 6″ cut. The saw spindle is very heavy, running in self-oiling bearings, namely, 1 15-16″ x 8″. Where saws go on the spindle is turned down to 1½″. It is also provided with multiple collars, permitting a number of saws to be placed at any desired distance from each other. Will rip 18″ wide with the first saw and 23″ wide with last saw, and is adjustable by sixteenths.

The variable feed can be instantly changed by the operator from nothing to 200 feet per minute, simply by moving the lever on side of machine and regulating the feed just as desired, so that the cut of the saw can work up to its full capacity, either on the thinnest or thickest material, on hard or soft wood, without stopping the saw or even the feed of the lumber being sawed, and has feed shaft with toothed steel disc for feeding and plain delivery roller with splitter for discharging material. Feed is driven with chain and sprocket. It can also be lifted out of the way and saw used as hand rip. The device for raising and lowering the heavy iron table, as well as the device for moving and locking the fence, are pronounced by mill men to be simply perfect.

The main table has a sliding section which can be instantly withdrawn to allow for use of more than one saw. No screwing of the table up and down, but by one movement of the handles shown, the table or the self-feeding attachment can be raised or lowered to their full capacity.

Spindle pulley 8″ diameter by 8″ face.

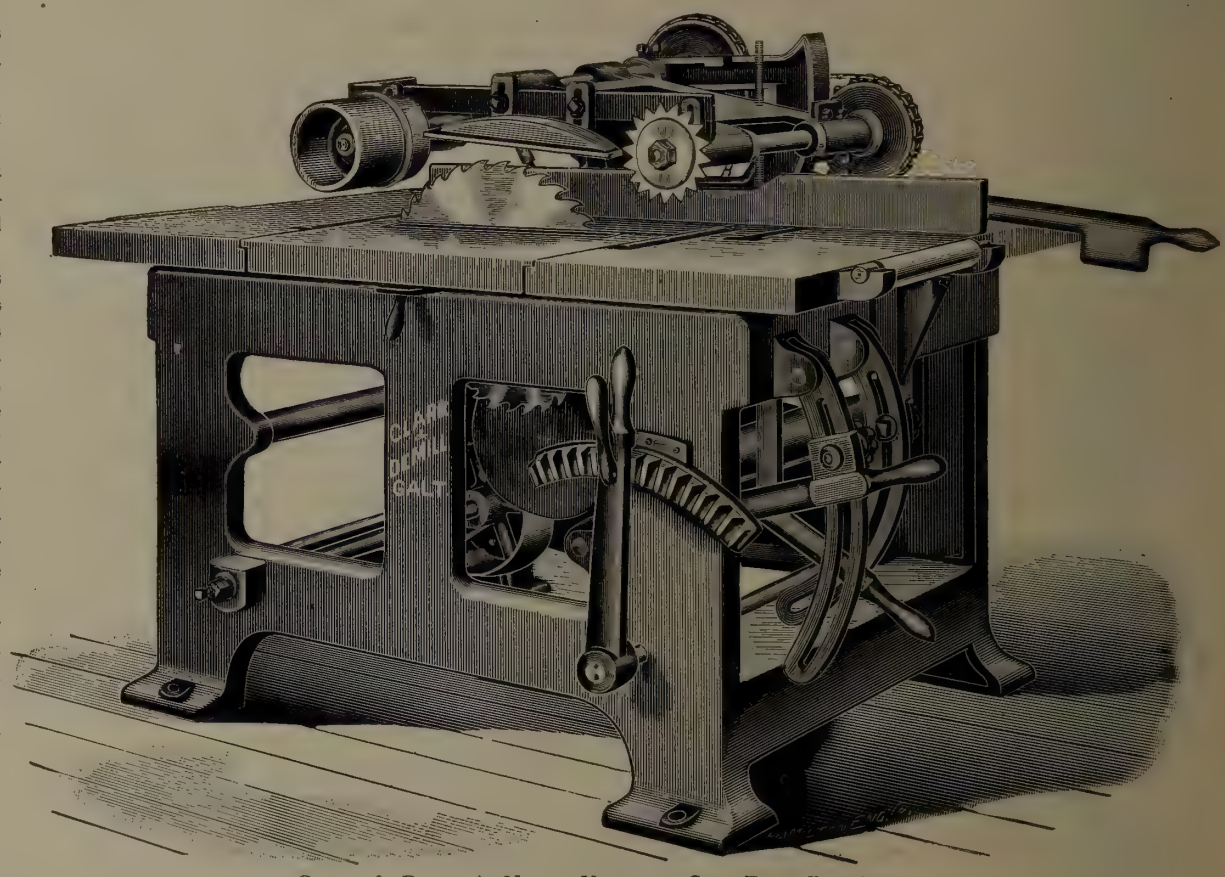
Tight and loose pulleys 12″ x 8½″, and should run 800 revolutions per minute.

Speed of spindle, 2,000 revolutions per minute.

Bearings and loose pulley are self-oiling. Weight of machine 2,400 pounds.

Besides this rip-saw, Clark & Demill make an improved power mortising machine, as well as a regular line of wood-working machinery. We would advise all those contemplating purchasing to send and get a copy of the illustrated catalogue giving all the latest devices known and now used in the leading wood-working factories of the world.

Cut gears are used on all machinery turned out by this firm. Their mortising machines are especially adapted to those who are doing sash, door and blind work. One of the largest factories of this kind say the Clark & Demill machines are the best in the world.



CLARK & DEMILL'S NO. 24 VARIABLE SELF-FEED RIP SAW.

THE B.C. SHINGLE PRODUCTION.

EXETER, ONT., OCTOBER 20, 1903.

EDITOR CANADA LUMBERMAN:

DEAR SIR,—In looking over the October number of THE LUMBERMAN I notice an editorial note in reference to the over-production of B.C. shingles. In that article the sympathy seems to be with the manufacturer. He certainly should be entitled to all the blame for the present condition of the trade. There is another side to the question, namely, the side of the retailer, which is of as much importance financially as that of the manufacturer. The manufacturer waits upon the retail dealer and puts the matter before him as follows : "Now, B.C. shingles are going to advance; you had better place your orders early. We are satisfied that it will save you money to do so." The retailer in many cases places his order for from five to ten car loads, and in this way the trade is more than supplied. The manufacturer finds difficulty in disposing of his cut, and as a result drops the price in order to dispose of his stock. Now, this is where the retailer is squeezed; he is loaded up at high prices. The drop at the mills compels him to sell for whatever price he can get, and it is a well-known fact that in many cases he cannot realize what the shingles cost him, thereby suffering a greater loss than the manufacturer.

The B.C. shingle business is the most unsatisfactory part of the retail trade, and unless there can be a more satisfactory arrangement with the mills, retailers will be forced to carry much lighter stocks.

There is another complaint the retailer wishes to bring before the public in connection with the lumber trade. During the last three or four years prices have steadily advanced, and perhaps a little more than was necessary, but we do not object so much to the price as we do to the lowering of the grades, for every retailer has found to his sorrow that the grades have been lowered from five to ten per cent., causing loss to the retailer and annoyance to the consumer. We are willing to pay a legitimate price, but demand a standard grading.

Yours truly,
J. W. TAYLOR.

NO EVIDENCE OF A LUMBER COMBINE.

The Commissioner appointed by the Dominion Government to investigate certain charges as to the existence of a lumber combine in Manitoba and the Territories, held another brief session before Judge Richards, at Winnipeg, recently. The counsel present were Messrs. H. M. Howell, K.C.; J. A. M. Aikins, K.C., and Stanley Hough, representing the Western Retail Lumber Dealers' Association; and Mr. A. J. Andrews, representing the complainants. Mr. Andrews made a statement on behalf of persons claiming to have a grievance, announcing that his clients, who represented various business interests, did not feel that they should be called on to bear the expense of proving the existence of a lumber combine, whose operations prejudiciously affect the prices of lumber and prevented certain parties from doing business. They claimed the expense should be borne by the government. In the meantime he had no evidence to submit.

On his lordship taking his seat and declaring the commission ready to proceed, Mr. Andrews rose and said in effect: "It is claimed by the parties I represent that there exists an organization known as the Western Retail Lumber Dealers' Association, composed of manufacturers, or wholesalers, and retailers, the first named being honorary, and the last named the active members. This association only permits a certain number of active members in towns, according to the amount of lumber sold. No other person can engage in business without applying for membership, according to the by-laws of the association. These by-laws, I understand, have been repealed, but were in force at the time the commission was appointed. Under the by-laws the wholesalers refused to sell to dealers not members of the association."

Mr. Aikins pointed out that the by-laws were not in effect.

Mr. Andrews said he did not know they were, but they were nevertheless observed. He claimed that the monopoly of combine in lumber was as binding to-day in the western country, Winnipeg excepted, as it ever was. The manufacturers were permitted to sell lumber to railway and elevator companies but not to individual non-members, consequently the people were being compelled to pay tribute to certain gentlemen who arbitrarily fix prices without consideration to the cost of production. Any person selling under their tariff was promptly crowded out of business. He called attention to the resolutions of the Calgary and Winnipeg city councils asking for a commission and also a ruling as to the language of the commission issued by the government, which says: "We have reason to believe a combination exists."

Mr. Andrews further said: "My clients are wholesale dealers, manufacturers and others. They do not feel it their special duty to present the evidence to prove the existence of this combine, but are prepared to give evidence if called upon to do so, and I have, therefore, at this moment, no evidence to offer. My clients claim that the burden should be borne by the government, the same as a criminal prosecution after the case has been sent up for trial."

Mr. Howell—"We'll send this case up for trial. Mr. Andrews comes here and villifies people and will not go on to prove his charges unless he is paid for it by the government. The by-laws he refers to are not in force, and Mr. Andrews knows it. They were even not in effect when this commission was appointed; at least, I am so instructed."

His lordship—"This commission is here to receive statements regarding charges to be proven."

Mr. Howell—"Are we to prove negatives?"

His lordship—"No."

Mr. Andrews—"If I have villified any persons I am prepared to prove my statements. I have letters now in my hand which will prove what I have said. His lordship may have them if he desires. My clients, however, feel that they have no right to bear the expense of having this evidence produced before the commission."

Mr. Aikins—"There is no charge against the association. Mr. Andrews says he has no evidence, therefore we have nothing to answer. It does not appear that we are called upon to say anything."

His lordship—"At an adjourned sitting other people may have some evidence to offer. I have received letters stating that evidence can be secured in other places in the country. I have had no particulars as to the nature of this evidence, and at present I do not know if I shall be warranted in putting the government to the expense of going to these towns. It was intimated at the outset that no meetings would be held elsewhere until it was ascertained what evidence there was to offer here, but I shall now notify these persons asking them if they are prepared to adduce any evidence bearing on the matter under investigation, and if they have to arrange to submit it before the commission."

Mr. Aikins—"There is no specific charge against the association. I would suggest that when any charges are made against the association their solicitor be notified so that he can answer them."

His Lordship—"The commission issued to me expresses the belief that a combination exists, but mentions no parties, though from what Mr. Andrews has said it might appear that the association are the parties whom the the complainants had in view when asking for an investigation."

Mr. Andrews—"Your lordship might report to Ottawa the views of my clients."

Mr. Richards—"I do not intend to report anything in detail. I shall simply report that there was no evidence to offer."

Mr. Howell—"It must be proven that there is a combination and that the association is that combine. The first principle has not been shown. Surely your lordship does not intend to go around to hunt up evidence until the existence of a combine has been proven."

His Lordship—"Your remark as to hunting up evidence is not applicable. I do not intend to hold any more sittings until it is shown that there is some evidence to submit or at least until it be shown reasonably that a prima facie case can be established. I therefore make an enlargement for two weeks which should give ample time for all parties concerned to arrange their evidence."

Fire fighting apparatus is worse than useless unless kept in shape for instant use. Better have nothing than pumps that fail just when you need them, and water tanks and barrels that contain no water.

WOOD PULP DEPARTMENT

DRYING WOOD PULP.

Now that the question of the preservation of wood pulp has been pretty well thrashed out, a few words on the various methods of storing it may not be out of place. Every method of preservation has its advantages and disadvantages, and consequently also its adherents and opponents, and one method of storage may, owing to local circumstances, suit one mill better than others. The two methods of storage, however, which are best suited for medium sized and small mills are either wet storage in pits or drying the pulp. The great advantage of wet storage in pits is that the pulp is always, so to speak, fresh and of good colour, and the fibres always remain supple, a point of no small value in working it up. Mr. Braun, of Rochsburg, has, since 1888, obtained splendid results from storage in pits, pulp which has been so stored for upwards of five years appearing as fresh as if it had only been ground the day before. In pit storage, however, it is almost impossible to prevent impurities such as sand etc., from getting into the pulp, as well as loss of material; moreover, a medium sized mill will require quite a considerable number of pits. Mills which run a pulp-making plant in addition to the paper-making machinery, and which turn out more pulp at a time than they can consume, will find pit storage the best method of keeping their superfluous material, as it can always be worked up in the hollander direct. Where, on the con rary, special stress is not laid upon having the fibres absolutely fresh, it is more advantageous to dry the pulp. Many pulp makers believe that drying pulp requires expensive apparatus, and prefer to store the bales of pulp piled up in stacks. In order, however, to keep the stuff from spoiling, sheds or other light structures must be provided which will allow of sufficient circulation of air, but at the same time keep out light and dust. Light structures of this kind will be quite sufficient to keep pulp air-dry, the only thing else required being some means of suspending the pulp in sheet form. A press is not absolutely necessary; pulp containing 33⅓ per cent. of dry material can be kept hung up quite easily; nevertheless the usual wooden rails and pasteboard clips should be used for suspending the wet pulp, as they give a better grip of the soft wet sheets, and are not so likely to tear them. The wooden rails between which the wet sheets of pulp are held give a good grip along the whole upper edge of the sheets (which are of considerable weight owing to the large amount of water they contain), and facilitate the handling and suspension of the sheets generally. The uneven contraction of the sheets produced by this method of suspension is of no consequence in this case. The sheets of pulp thus air-dried may be subsequently piled up in large stacks, and if stored in places from which light and moisture can be excluded will keep for years without losing their quality. Sheets of pulp thus dried dissolve more easily than sheets which have been squeezed dry in a hydraulic or screw press, a circumstance which is frequently of advantage. Dried pulp should preferably be put through the edge runner first before going to the hollander, this being the safest way to avoid spotting. On the other hand, where a pulp maker desires to use the dried pulp direct when water is scarce, so as to cover loss in production and to enable the stuff to be delivered wet, the best course is to soften the sheets beforehand in suitable vessels so that they can be readily folded together. They are then doubled up or broken up sufficiently small to go through the beater engine boxes and ground up by the grindstones. The dried pulp may be fed to presses working fresh pulp, and if the dried material be added gradually the resultant product cannot be distinguished from fresh stuff. The dried pulp may also when sufficiently soft be fed into the refiner; this, however, makes rather more work than the first method. Mills which use clean well water in place of clarified river water may also keep their pulp in a wet state by rolling it up in thick rolls. A mill in the Rhenish provinces has kept pulp in this way for over two years without the least signs of deterioration; the rolls were just piled up, and not too well ventilated either. A point worthy of notice, in conclusion, is that pulp should be ground and washed with as much water as possible, so as to thoroughly remove vegetable albumen.—Holzstoff Zeitung.

PROPOSED COMBINE OF PULP MILLS.

The low selling price of mechanical wood pulp is agitating the minds of Scandinavian manufacturers, who are endeavoring to form a combine so as to reduce the output. In respect to the project the Words' Paper Trade Review, of London, Eng., says :—The Scandinavians in order to protect their own interests now favour the idea of combination, and British buyers who have had the market in their favour for some time, will watch with considerable interest the outcome of the various proposals before the Scandinavian trade. During the eight months (January-August) of the present year the imports of wood pulp into Great Britain were as under :—

Chemical—Dry	119,462	tons	£936,321
" Wet	14,851	"	56,941
Mechanical—Dry	4,838	"	24,330
" Wet	207,637	"	469,561

Compared with the corresponding period of last year, the above figures show an increase of 6,706 tons and £6,146 in chemical dry, an inincrease of 6,158 tons an £11,189 in chemicald wet, an increase of 310 tons and a decrease of £4,172 in mechanical dry, and an increase of 4,928 tons and a decrease of £30,587 in mechanical wet. The shrinkage in the value of mechanical is very evident.

The question of combination in Scandinavia is no new thing, but owing to want of loyal support previous efforts have ended in failure. It is essential to the British papermaker, in order to meet foreign competition, to obtain his wood pulp supplies at moderately low prices, and it is highly desirable that there should be an absence of serious fluctuation. The competition among Scandinavian mills appears to have kept prices down to some extent, as notwithstanding standard quotations on the market at the present time of 38s. 6d. to 40s. for prompt delivery c.i.f. British ports, there are mills only too ready to accept such offers as 36s. 6d. to 37s. The Scandinavians in advocating combination recognize over-production, and the idea is to sell their pulp through a central office, to obtain statistics bearing upon production, sales, stock, etc., and to adopt any defensive policy in the interests of the industry.

British papermakers do not take kindly to combination, fearing an aggressive attitude. The present time, we learn, is considered by the Scandinavians as being favorable for mills to come to some agreement, and Canadian competition as a factor is entirely scouted. Many manufacturers in Norway and Sweden point to the failure of the Acadia Pulp Company as showing the unstable footing upon which many of the wood pulp undertakings in Canada have been started up. The withdrawal from the Canadian field of Messrs. Lloyd, Limited, is also looked upon as confirming the views held in Scandinavia that Canada does not possess any advantage over those enjoyed by Norway and Sweden in the exportation of wood pulp to the British market. In fact, it is believed that the Canadians are not in a position to successfully compete with Norwegian and Swedish mills. Following the Acadia failure, particulars have come to hand this week of the collapse of the many enterprises in Ontario with which the name of Mr. F. H. Clergue is prominently identified. It would be rash to attribute the present difficulties to the Sault Ste. Marie pulp works, although it appears the latter have not been by any means profitable.

Another disappointing Canadian wood pulp venture is that started at Shawinigan Falls, Quebec, by the Belgo-Canadian Pulp Company. The working of the mill supports the belief of many manufacturers in Scandinavia that a too low estimate of cost of production is given in prospectuses of Canadian wood pulp mills brought under the notice of the investing public. Covering a period of six months, the Belgo-Canadian Pulp Company is stated to have sustained a loss of 1,250,000 francs, and the directors have urged the shareholders in the future to engage in the manufacture of paper as well as pulp. The manufacture of wood pulp in Canada, notwithstanding the difficulties met with by several undertakings, is being gradually increased, and exports show considerable development. The following figures relate to the shipments from Canada for a period of eleven months ended May last,

together with those for the corresponding eleven months of the previous year :

	July-May, 1901-02.	July-May, 1902-03.
United States	$1,002,307	$1,561,049
Great Britain	728,977	1,015,228
Other countries	57,418	220,202
	$1,788,702	$2,796,479

The total value shows an increase of over 56 per cent., the principal market being the United States, followed by Great Britain. The principal Canadian wood pulp mill exporting to Great Britain is that controlled by the Chicoutimi Pulp Company, and as many important contracts are held, it seems that it is practically left to this concern for the time being to prove that Canadian wood pulp can successfully compete with the Scandinavian product.

PULP NOTES.

The Canada Paper Company are now rebuilding their chemical pulp mill at Windsor Mills, Que.

W. J. Hill, of Toronto, has secured from the Nepigon Pulp & Paper Company a contract for the construction of a power dam and pulp mill at Nepigon. The amount of the contract is said to be nearly $400,000.

A party of gentlemen recently arrived at Kamloops, B. C., under the direction of H. L. Gibbs, of Traverse City, Mich., to look into the possibilities for the establishment of large saw and pulp mills. They had two cruisers out all summer on the Western Pulp & Lumber Comany's limits up the North Thompson river and branches and are said to be favorably impressed.

W. A. Bauer, of Vancouver, has completed the survey of 75,000 acres of spruce and larch timber lands on Princess Royal Island and is said to be preparing plans for a large pulp mill to be built by J. J. Palmer, of Toronto, and British capitalists. The entire plant is estimated to cost $1,800,000. It is claimed that the company will be able to ship pulp to Puget Sound and California and as far east as Winnipeg.

John Gray, superintendent of the woods department of the Sturgeon Falls Pulp Company, states that the company have commenced the manufacture of pulp and paper. The plant is designed to turn out 100 tons of pulp per day, although it will be a few months yet before this capacity is reached. It is the intention to manufacture all the pulp into paper at Sturgeon Falls. Mr. Gray considers that the prospects for the Sturgeon Falls Company are exceptionally bright, as the pulp wood is delivered to the mill for less than $2.50 a cord. The wood is cut about 80 miles up the Sturgeon river, which is an excellent stream for floating down the logs.

Messrs. H. L. Frank and John Forman, of Montreal, and Hon. A. E. Spriggs, ex-Lieutenant Governor of Montana, recently returned from a trip of inspection up the Jacques Cartier river in connection with their proposed pulp enterprise. They own 17,000 acres of black spruce, and in addition have leased 187 square miles of timber limits from the Government. They intend to build a pulp plant at the mouth of the Jacques Cartier river. They will have the best of water power there, and can easily float the logs down the river to the mill. It is estimated that 8,000 horse power is obtainable at the mouth of the old canal, which joins the Jacques Cartier and St. Lawrence rivers.

Mr. S. Wertheim, of Wertheim & Company, extensive pulp importers, Hamburg, Germany, says concerning the pulp market : "The present prices are so low that they cannot practically go lower ; besides, you know that low prices always create a larger consumption. In fact, papermakers commence to realize this, and the market is already somewhat firmer. Of course it is impossible to say and difficult to predict when the crisis will be over, this depending upon the paper production coming up to the pulp production. To judge, however, from experience in former similar periods I should venture to say that it will not take more than one or two years before we can expect normal and satisfactory prices again."

A party of seven prospectors, in charge of Noel Humphrey, of Vancouver, recently returned to that city from the north. They had been up to China Hat making a survey of the timber limits in that locality and were acting for a company which purposes building a pulp mill on what is known as Swanson Bay. According to Mr. Humphreys, who is the chief engineer of the company, the mill is to be constructed next spring and will have a capacity of 170 tons a day. Power will be obtained from a fall of water from the mountain side, a gravitation of 150 feet having been secured for the purpose. It is intended to manufacture paper as well as pulp. Another pulp mill is to be erected in the spring at Bella Coola, a company having been formed in Seattle for the purpose.

THE JENCKES MACHINE COMPANY, LIMITED
1015 Lansdowne Street Sherbrooke, Quebec

THE NEWS

—Hawson & Baker have sold their saw mill at Morrissey, B.C., to G. H. Gilpin.

—The Rosenroll Lumber Company has been incorporated at Rosenroll, N.W.T.

—Smith & Lebeau, saw millers, Ferguson, B.C., have dissolved, Mr. Lebeau continuing.

—Buckman Bros. have installed an electric plant for lighting their saw mills at Whitney, Ont.

—The Manitoba Lumber Company, Limited, has been incorporated, with headquarters at Carman.

—Roberge & Frere have registered business as saw millers at St. Adelph de Champlain, Que.

—W. Juehlfs has retired from the lumber firm of Weins, Jacob & Company, Gretna, Man.

—The business of Stephen Lambe, lumber dealer, Seaforth, Ont., has been purchased by N. Clough & Sons.

—The Standard Lumber Company, Limited, has been incorporated by the British Columbia government.

—The Chandler-Jones Lumber Company, of Ogdensburg, are building a saw and shingle mill at Ompeh, Ont.

—Bell & Company are building a saw mill on False Creek, Vancouver, B.C., to be in operation by the early spring.

—The late James Robertson, president of the James Robertson Company, Montreal, left an estate valued at $369,764.82.

—J. A. Rosseau and Hercule Arcand have registered proprietors of the saw mill business of H. Arcand & Cie, Champlain, Que.

—The engine house in connection with the sawmill of the Cascade Lumber Company at Vancouver, B.C., was burned last month.

—The annual meeting of the O'Neill Lumber Company was held at St. Martins, N. B., recently, when the old board of directors were re-elected.

—The stockholders of the Red Deer Lumber Company are organizing a company for the erection of a large casket factory in Winnipeg.

—George White has recently returned from Arrowhead, B.C., to Parry Sound, where he will build a sash and door factory and planing mill.

—The Bonny River Lumber Company, of Bonny River, N.B., are operating two rotaries and a lath machine pending the reconstruction of their mill.

—John R. McConnell, of Marysville, N.B., is said to have leased the Q. Robinson mill at Lower St. Marys and will carry on sawing operations next season.

—J. T. Morrin and Alfred Cossette have registered as proprietors of the business of J. T. Morrin & Cie., lumber manufacturers and dealers, Valleyfield, Que.

—Large dry kilns and a blower system will be installed in the new factory of the Collingwood Furniture Company at Collingwood, Ont., now under construction.

—The San Juan Boom Company has been incorporated to construct and maintain booms and logging improvements on the Gordon river, Vancouver Island, B.C.

—The Peter Hay Company, Limited, has taken over the business of Peter Hay, manufacturer of machine knives, Galt, Ont. The new concern is capitalized at $100,000.

—The Savanne Lumber Company are said to have decided to remove their mill from Savanne, Ont., to another location, the timber in that vicinity having become exhausted.

—The lumbermen operating on the St. Frances river, in Quebec, purpose making improvements to facilitate the floating of logs. A number of dams will be constructed.

—Keenan Bros., of Owen Sound, Ont., have purchased a saw mill near Holland Centre and are removing part of the machinery to Owen Sound and the balance to their Eugenia river mill.

—The Canadian Timber & Saw Mills, Limited, an English corporation, have been granted a license to carry on business in British Columbia, with headquarters at Trout Lake and a capital of $150,000.

—The Lumbermen's Supply Company has been incorporated at Toronto, with a capital of $50,000. The provisional directors are P. J. Loughrin, J. S. King, C. A. Johnson, William Anderson, and Charles Moore.

—The Arthabaska Chair Company has been incorporated at Victoriaville, Que., with a capital of $12,000, to manufacture chairs, furniture, etc. The directors include J. E. Alein, H. Walsh and N. Rosseau.

—The King Edward Oil Company, Limited, has recently been organized at London, Ont., with a capital of $100,000. The directors are J. R. Dowell, G. S. Robb, James Houlden, James Hutcheon and Samuel Howard.

—"Hoo-Hoo Day" at the World's Fair, St. Louis, will be September 9, 1904. Work on the "House of Hoo-Hoo" will begin soon. It is designed to build a club house at the World's Fair for the comfort of the members when they visit the Exposition.

—The business of the McEachren Heating and Ventilating Company, Galt, Ont., has been purchased by U. S. Sheldon. Mr. Sheldon has been business manager of the company for a number of years and under his direction the industry should continue to grow.

—The new mill of the Rat Portage Lumber Company at Winnipeg, Man., will be completed so as to commence sawing operations early next spring. The mill pond will be 400x150 feet and about 10 feet deep. Water for the pond will be pumped from the Red river.

—Several lumber manufacturers in the province of Quebec are said to be considering the advisability of operating their mills throughout the whole year. The Lawton Company have constructed the necessary steam pond and will try the experiment this winter. Their mill is located at Ste. Agathe des Monts.

—The logging camp of G. H. Finlay on the Squamish river, B.C., is being operated by the E. K. Wood Lumber Company, of Puget Sound. Finlay & Company recently failed. The new concern will spend about $10,000 in improving the retaining boom at the mouth of the Squamish river.

—C. Flynn, millwright, who has charge of the sawmill now under construction at Trout Lake, B.C., states that the mill will have a capacity of 120,000 feet a day and will be modern in every particular. The main building will be 160x34 feet, with a planing mill attached 60x70 feet. Adjoining the planing mill will be a four-room dry kiln, having a capacity of 60,000 feet of lumber. The boiler room will be 40x30 feet, and there will be shingle and lath mills. It is also the intention to install an electric light plant to light the mill and the streets of the town.

—One of the reports of surveying parties, summing up the country lying back from the north shore of Lake Superior and Lake Huron, north of the height of land, says: It is largely covered with extensive forests of spruce, jackpine and poplar. The value of this class of timber is, as everyone knows, increasing every day, and the market for it is widening; and rich indeed is the country which has boundless resources in these varieties of woods. In the district of Nipissing, north of the Canadian Pacific Railway line, there is estimated to be at least 20,000,000 cords of pulp wood; in the district of Algoma, 100,000,000 cords; in the district of Thunder Bay, 150,000,000 cords, and in the district of Rainy River, 18,000,000 cords; a grand total of 288,000,000 cords.

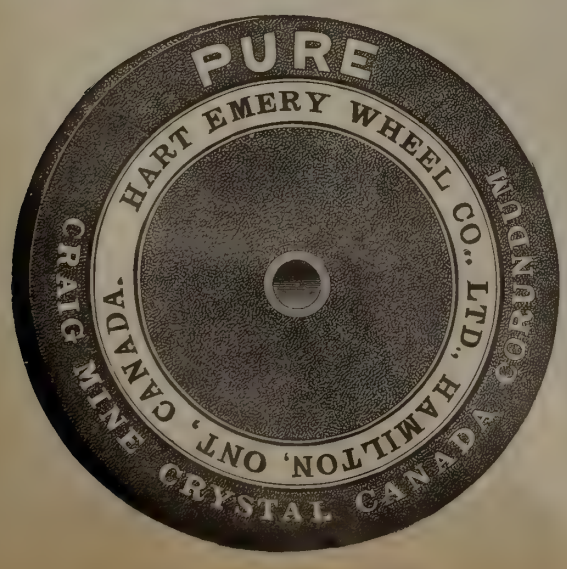
PUBLICATIONS.

The Rossendale Belting Company, 59 to 63 Front street east, Toronto, has just issued a new Canadian catalogue and price list of their "Rossendale" belting, a copy of which may be obtained for the asking. It gives, among other things, a number of practical reasons for using the M. A. Y. brand of special patent edged solid woven belting and a table showing the indicated horse-power transmitted by this belting.

The American Blower Company, of Detroit, Mich., have issued three very attractive catalogues, designated as follows: No. 118, Second Edition, "The A. B. C. System of Mechanical Draft forced and induced by Blowers and Exhaust Fans"; No. 145, Second Edition, "The A. B. C. Fan System of Heating and Ventilation as Applied to Manufacturing Establishments;" No. 155, "The A. B. C. Steel Plate Fans for Heating, Ventilating and Drying Plants, forced and induced Drying Apparatus, etc." All persons interested in these subjects should write for a copy.

A novel exhibit at the St. Louis World's Fair will be a representation of life in the lumber camps, the plan of Frank Howard, of Munising, Mich., who has arranged for its production on the "Midway" at the Exposition. There will be a logging camp, manned by a crew of the typical lumberjack, in full operation, and at stated times the men will be seen at play, among these sports being the lumberjack's favorite pastime of log-rolling. The arrangement of actual life in the pineries has taken the designer several years to perfect, and the exhibition promises not only to be novel, but very interesting as well.

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says:

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by Canadians for Canadians.

HART CORUNDUM WHEEL COMPANY, Limited, Hamilton, Ont., Can.

TRADE NOTES.

The American Blower Company recently shipped a dry kiln outfit to the United States Furniture Co., of Evansville, Ind. This makes the seventh concern in that town using the " A. B. C. " moist air kilns.

The Maritime Engineering Company, Limited, has been incorporated at Moncton, N. B., with a capital stock of $30,000. It is proposed to establish a foundry and machine shops and to engage in the manufacture of engines, boilers and castings.

The Gordon Hollow Blast Grate Company, Greenville, Michigan, who claim to be the largest manufacturers of patented and liberally guaranteed hollow blast grates, most modern and up-to-date lumber edgers and trimmers for small saw-mills cutting up to 30,000 ft. in ten hours, in the world, will be pleased to send to all interested in their superior line and who will write for it, a complete set of their beautiful, instructive and valuable printed matter. Kindly mention this paper when making request and you will then be sure of receiving preferred attention.

Nearly every lumberman in the Dominion has a team or more continually hauling logs or lumber; nearly every load must be bound before starting and nearly always is this done with a sapling or boompole. In the United States there is in use a patent device which hooks into the chain and by pulling down a lever, takes up the slack and binds a dozen times more tightly than can be done with the best hickory pole. Being so much more safe, more quickly adjusted and easily detached, it has come into quite common use in that country. Now being introduced in the Dominion, it will likely meet with a ready sale and will in time, no doubt, entirely supplant the crude, old-fashioned binding pole of our forefathers and come into general use. Being made of iron it should last a lifetime, and lumbermen generally will do well to notice the advertisement of this load binder to be found in this issue. Eugene C. Stacy, Bloomdale, O., has control of the Canadian trade.

SUPPLIES FOR THE CAMP.

During the fall and winter months every lumberman operating in the woods will require to purchase a certain quantity of supplies for the camps. The best that is on the market will be found advertised in the CANADA LUMBERMAN. Food supplies, heating and cooking stoves, moccasins, mitts, cant hooks, logging tools, axes, snow plows—the most up-to-date manufacturers of these goods keep an announcement before the lumber trade of the Dominion by using this journal. When you want supplies communicate with these firms, and don't forget to incidentally mention their advertisement. They will appreciate it, and so will THE LUMBERMAN.

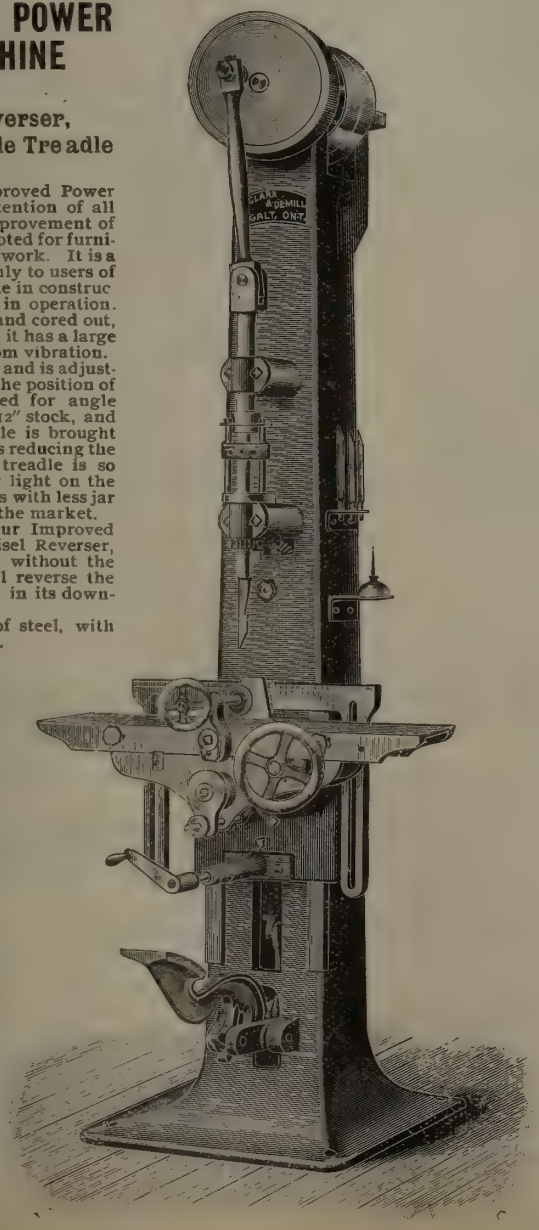
TORONTO, ONT.

NO. 25 IMPROVED POWER MORTISING MACHINE

With Tilting Table, Automatic Chisel Reverser, and Adjustable Treadle



OUR new designed No. 25 Improved Power Mortiser is worthy of the attention of all wood workers interested in the improvement of machinery of this class. It is adapted for furniture, cabinet, sash, door and blind work. It is a tool we cannot recommend too highly to users of this class of machinery. It is simple in construction, easy to manipulate, and rapid in operation.

The Frame is cast in one piece, and cored out, making it very stiff and strong, and it has a large base, thus freeing the machine from vibration.

The Table is long and compound, and is adjustable to and from the chisel to suit the position of the mortise Can also be adjusted for angle mortising. Will drop to receive 12" stock, and mortise to the centre of 6". The table is brought up to the chisel by foot treadle, thus reducing the strain on the chisel spindle. The treadle is so compounded that the strain is very light on the operator's foot. This machine runs with less jar than any other similar mortiser on the market.

The Spindle is supplied with our Improved Automatic Spindle Guide and Chisel Reverser, which holds the spindle in position without the use of keys or set screws, and will reverse the chisel by the action of the table in its downward travel.

The Connecting Rod is made of steel, with brass bushings and steel crank pin.

Note the Advantages: No friction belt to get loose or run off, which has caused so much trouble and waste of time repairing in the past. The chisel can be reversed as well when the machine is standing as when in motion.

Chisels. Each machine is furnished with six chisels, namely, 5-16", 3-8", 7-16", 1-2", 5-8", 3-4".

Tight and loose pulleys run between bearings, and are 12" x 3¼", and should run 550 revolutions per minute.

Bearings and loose pulleys are all self oiling.

Weight of machine 1400 lbs.

No. 26 Machine is the same as No 25, only it has boring attachment, and is furnished with 6 Borer Bits to suit the above size chisels, which spindle is in a line with the chisel spindle. The work can first be bored, then fed under the chisel and mortised without being taken from the table.

Weight of machine 1500 lbs

Cut Gears. We use Cut Gearing on all our machinery.

THE E. LONG MFG. CO., ORILLIA, ONT.

SUPREMACY IN THE SCIENCE OF FORESTRY.

The United States government, contrary to all precedent, will participate in a competitive exhibit at the World's Fair in St. Louis. Uncle Sam will have for his rival the German Empire, which nation's methods of forest management are best and most practical is the problem to be solved by actual demonstration.

Two tracts of land, already partially covered with trees, and each about five acres in extent, have been assigned to the United States and German Governments, as the laboratory for their tests. The two lie side by side, so that the visitor may walk through what the Americans call an "arbortum", and observe all American methods of forestry, and then step across into what the German designates as a "forest garden" and learn the German method.

No trees will be cut from either tract. Rather transplanting will be resorted to, and when the Exposition opens miniature forests, perfect in every detail, with narrow gravel walks winding in and out, may be seen. Every tree that thrives in the latitude of St. Louis will be represented and the specimen can be easily designated. Attached to each tree will be an aluminum label on which will be stamped the botanical and common names.

In one respect the exhibits will be the same. Each display will embrace practically the same number of trees and they will be practically of the same varieties. Here all similarity ceases. The treatment will accord with the practices in vogue in the respective countries. In the American arbortum the trees will be planted, trained, and pruned and treated according to the American idea. In the German forest garden will be reproduced, in the miniature, the effects that obtain in the forests of the Fatherland, and the story of how the wonderful forests of that wonderful country have been preserved through ages, and renewal from time to time, will be told by practical demonstrations.

The exhibits will be in charge of the most expert foresters to be found in the two countries. Interest will not center in the exhibits merely because they represent all that is best in the forestry of both countries, but because of the practical demonstrations and tests that will be made every day of the Exposition.

The GEORGE REGISTERS

is being used by the largest Planing Mills in the country, who have given their written testimonials.

Here is a sample :—

THE STOUFFVILLE BRASS & STEEL WORKS,
Stouffville, Ont.

Burks Falls, Ont., Feb. 13, 1903.

GENTLEMEN,—In answer to your inquiry with regard to the S. George Lumber Register, we desire to say that it has given every satisfaction. We put in one of 18000 ft. capacity lineal in the spring of 1902 and have used it constantly ever since and it has never given any trouble whatever, has never been out of order or laid up for repairs. We may further say that we are so well pleased with it that we have ordered another of the larger capacity of 60,000 ft. lineal, which we intend to use on another machine In conclusion we may say that we do not see how this machine could be improved upon and we feel certain that it will be a long time before a lumber register is produced which will be superior to the S. George. Yours truly,

THE KNIGHT BROS. CO., HENRY KNIGHT, Manager.

EMERY GRINDERS

The annexed cut represents our latest and most improved style of Emery Stand and the incessant demand for a frame that will resist the vibration of the stone when running at full speed has made us particularly careful to make "rigidity" one of the principal features of the same.

THE STOUFFVILLE BRASS & STEEL WORKS
STOUFFVILLE, ONT.

SQUARE BASE EMERY GRINDERS

Write for Prices and Terms.

There is one very good argument that is seldom advanced for the publication that charges a somewhat fancy price for space and levies extra rates on special position and cuts. Such mediums may be costly, but they always carry a fine class of publicity, the "cheap" advertiser with the questionable proposition being conspicuously and pleasantly absent. There are advertisers of long experience who would rather spend their appropriation in a single medium of this sort to reach a certain number of readers, though with the same amount of money it would be possible to reach three times as many by means of two or three cheaper publications. The wise advertiser who has a high-class proposition not only learns that he is known by the company he keeps, but also by the company that he keeps out of.—Printers' Ink.

Sawing Economy

Change your Circular
Saw to a . . . . . .

WATEROUS DOUBLE CUTTING BAND MILL

30% Increase in Daily Cut over Single Cutting.

Saving 15% of your Lumber that now goes to Sawdust.

Use a Waterous Steam Setter, 5 to 8% increase in daily cut with a possible decrease in setters' wages.

Use a Waterous Strip Machine besides your Edger to handle small logs—or

A Waterous Double Cutting Pony Band with special carriage—8 inch saws 34 feet long—short, stiff—stands heavy feed—several in successful operation

Change your present Single Cutting Band to a Double Cutter—at slight expense. 30 per cent. increase in output.

Use Waterous' Modern Steam Actuated Machinery throughout your mill, increasing output by saving seconds in each operation, repeated thousands of times daily.

Full information and new circular for the asking.

Peterborough, Ont.

R. H. SMITH CO., LIMITED

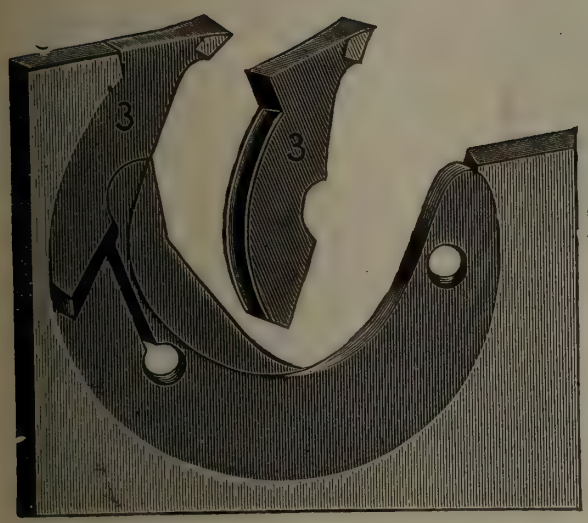
St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

Simond's Process

in the Dominion of Canada.

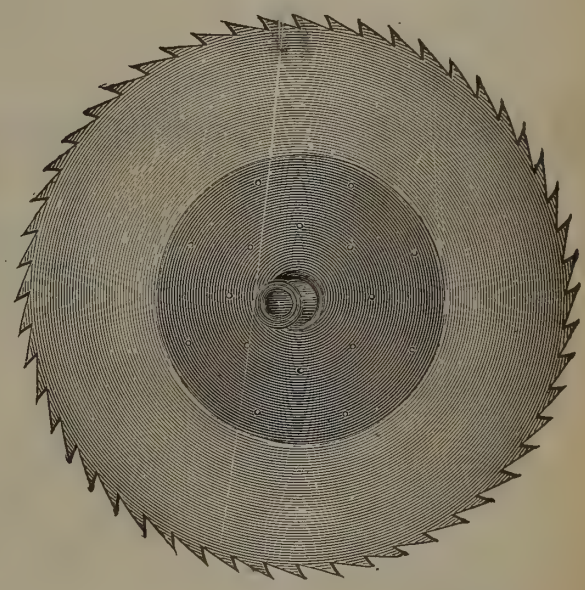
There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.



INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

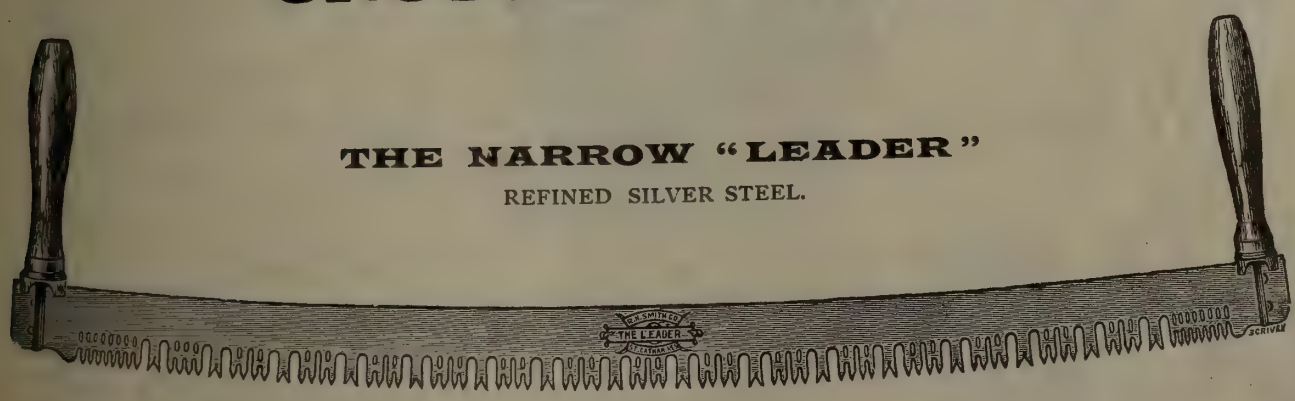


SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS



The Simond's temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Write for prices.

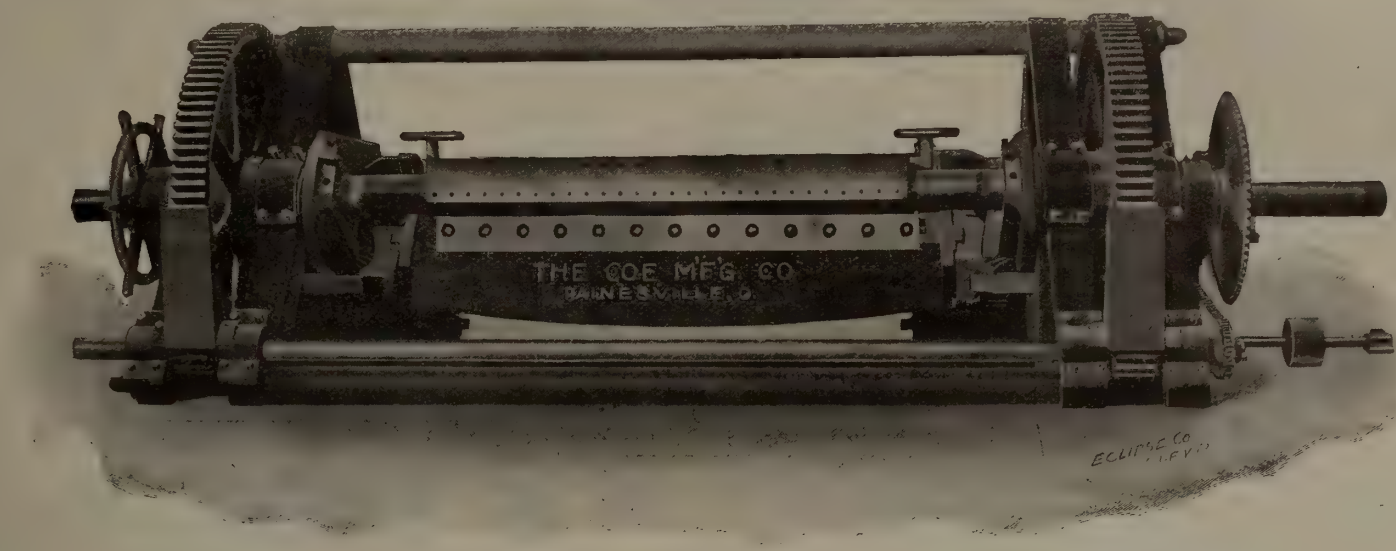
Our Celebrated

Rotary Cutting Veneer Machines

made in over sixty sizes, have stood the test and proved equal to any proposition to reduce logs into thin lumber and veneers.



The product is high grade.
The output is great.
The cost of operating and maintenance is reduced to a minimum.
Quite a combination, is it not ?

Timber and mill owners should get in early.
Buy a Coe Veneer Cutting and Drying outfit and prepare to supply thin lumber and veneers which have a healthy growing demand. More money in it than sawing your logs into lumber.

WRITE US.

PERFECT SWING SHINGLE MILL

Fitted with our Automatic Trip.

OUR Swing Shingle Mill is all iron and steel and has no complicated parts to get out of order. The saw collar can be removed in five minutes, and replaced by another without changing the set of the machine, thus saving much time when the saw is dull or injured. The machine is well adapted for cutting shingles, headings, etc. Each machine is fitted with our AUTOMATIC TRIP, whereby you get an evenly cut shingle, butt and point alternative, and, being automatic, requires no attention given to it while in operation.

Gentlemen:-

Replying to your favor of the 3rd. inst. I beg to say that we have the W. E. Hill & Co: Steam Drag Saw in use at all our plants and have no hesitation in saying that they are the best Drag Saw in the market. They will do more and better work than any Drag Saw made. They are well and strongly made and in an experience of over three years with some six or seven of their Drag Saws we have, I think, never lost a day with one of them.

Yours truly,

President.

ISN'T THIS TESTIMONY CONVINCING?

Watson's Portable Air Tight Baker

The most convenient stove ever constructed for use in the Woods, on the Drive, in the Camps. Bakes as perfectly as the finest range.

Read What Experienced Woodsmen Say of it:

"We used your Portable Woods Baker all last season with a crew of men in the woods, travelling from place to place. We found it convenient to handle and the best steel range cannot beat it in baking. It is a perfect baking oven and a success in every way.

The cooking is not affected by rain or weather and can be used outdoors or in a tent."

Yours truly,
MENOMINEE RIVER BOOM CO.,
Per Wm. H. Stephenson, Gen'l Supt.

We make these stoves in three sizes. Our No. 10 will cook for ten men; our No. 20 for twenty men, and No. 50 for from fifty to one hundred persons.

We want those interested in a stove of this kind to write us for full description and prices.

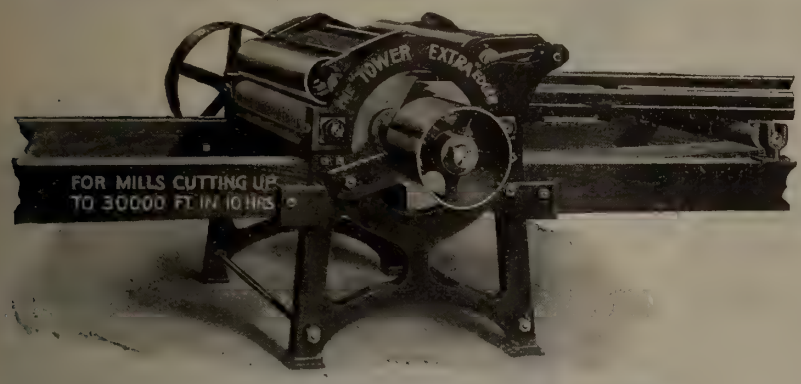
CHEAPEST EDGERS AND TRIMMERS ON EARTH

**Our Edgers and Trimmers are pre-eminently simple and practical.
They have everything that is essential and nothing that is superfluous.
That is why we can afford to sell them at such extremely low prices.**

Our line of Edgers and Trimmers comprises :

The Tower 2 and 3-Saw Edgers, Improved

For mills cutting not to exceed 20,000 ft. in ten hours.



The Tower Extra 3-Saw Edger

A larger and heavier edition of the TOWER, for mills cutting up to 30,000 ft.

The Tower One-Man 2-Saw Trimmer

With this trimmer one man can easily trim the output of a mill cutting up to 30,000 feet in ten hours.

We also manufacture the celebrated

Gordon Hollow Blast Grate

which burns wet, green or frozen sawdust or other refractory refuse readily, giving as good results with them as a draft grate gives with dry wood.

GEORGE LUMBER REGISTER

The Only Perfect Register on the Market.

We will send one of these Registers FREE on 30 days trial to any address and pay return charges if not entirely satisfactory.

The GEORGE REGISTERS

is being used by the largest Planing Mills in the country, who have given their written testimonials.

Here is a sample :—

THE STOUFFVILLE BRASS & STEEL WORKS,
Stouffville Ont.

Burks Falls, Ont., Feb. 13, 1903.

GENTLEMEN.—In answer to your inquiry with regard to the S. George Lumber Register, we desire to say that it has given every satisfaction. We put in one of 8000 ft. capacity lineal in the spring of 1902 and have used it constantly ever since and it has never given any trouble whatever, has never been out of order or laid up for repairs. We may further say that we are so well pleased with it that we have ordered another of the larger capacity of 60,000 ft. lineal, which we intend to use on another machine In conclusion we may say that we do not see how this machine could be improved upon and we feel certain that it will be a long time before a lumber register is produced which will be superior to the S. George. Yours truly,

THE KNIGHT BROS. CO., HENRY KNIGHT, Manager.

EMERY GRINDERS

The annexed cut represents our latest and most improved style of Emery Stand and the incessant demand for a frame that will resist the vibration of the stone when running at full speed has made us particularly careful to make "rigidity" one of the principal features of the same.

Address : THE CANADA LUMBERMAN, Toronto

THE ANSWER

Ask the best engineers and machinery builders that you know of, which is the best Babbitt Metal for all purposes they know, and they will certainly say the "SYRACUSE SMELTING WORKS" Babbitt Metal, as it has stood the test for the last 22 years in the United States and 15 years in the Dominion of Canada.

Run no chances in using inferior metal, but ask your dealer for the "SYRACUSE SMELTING WORKS" Babbitt Metal, the largest manufacturers of Babbitt Metal and Solder under the British Flag.

Montreal, Can., New York, U. S. A. and Seattle, Wash.

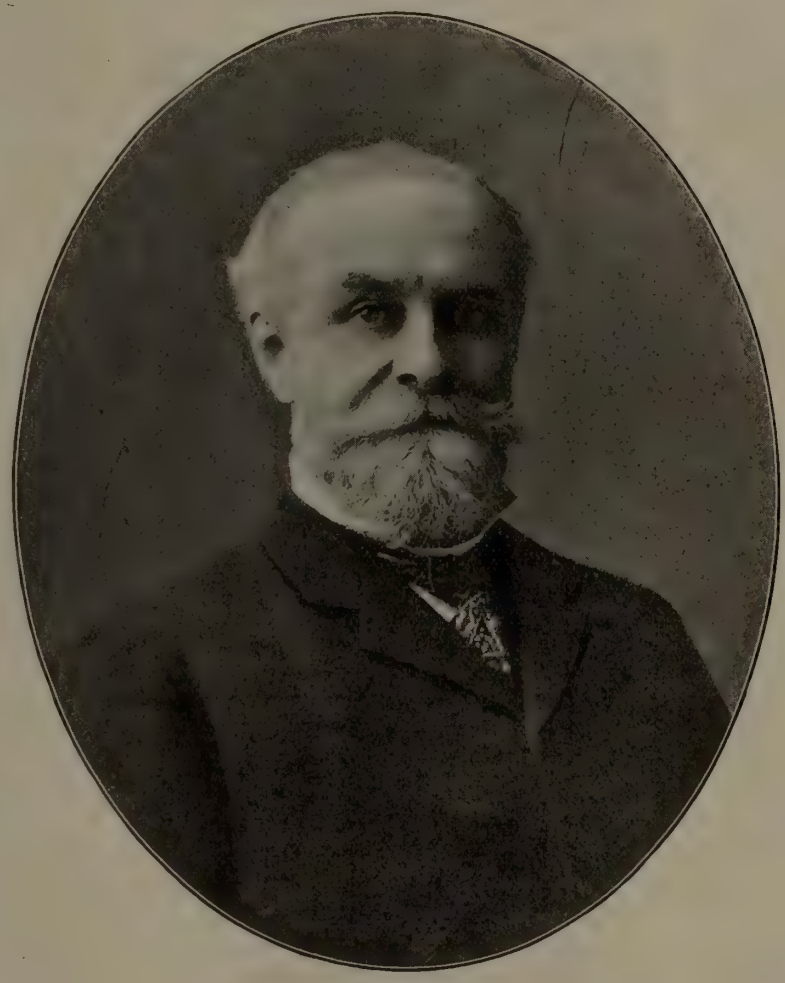
THE LATE MR. E. W. RATHBUN.

Mr. Edward Wilkes Rathbun, president and general manager of The Rathbun Company, of Deseronto, Ontario, was on November 24th called to his last resting place. His death was due to heart trouble, following a somewhat prolonged illness. The management of the numerous and varied associate industries of which he was the head was a vast undertaking for one man, and his health in late years had become greatly impaired by too strict attention to business. By some of his acquaintances it is said that he was the victim of overwork.

Thus endeth a most useful life. From his boyhood days Mr. Rathbun was engaged in the building up of Canadian industries. The loss sustained by his death is felt throughout the Dominion, while he will be especially missed in the town of Deseronto and its vicinity. One has said of him that he belonged to a class of men who have done much to develop this young country industrially while helping to raise it to a higher plane of civilization. He was a captain of industry, and although of foreign birthright had become a true Canadian through long residence in this fair land. He was a public spirited man and a firm believer in the future greatness of Canada, and was on many occasions influential in promoting public improvements.

As a lumberman Mr. Rathbun stood in the front rank. Commencing operations when the lumber business was in its infancy, his hand guided the destiny of a most extensive sawmilling enterprise into channels of success. Not content with simply sawing the logs into lumber, he in early life took steps to establish associate industries, so that the lumber might be further manufactured and all the refuse of the mills utilized to the greatest possible extent.



THE LATE MR. E. W. RATHBUN,
President and General Manager of The Rathbun Company, Deseronto, Ont.

Deceased was born at Auburn, N. Y., in 1842, and was the eldest son of the late H. B. Rathbun, the founder of Deseronto. He was educated in New York, and received his business training there in the house of Storm, Smith & Company, East India merchants. In 1861 he took charge of his father's enterprises at Millpoint, Ont., near where Deseronto now stands. The firm name was then H. B. Rathbun & Company. In 1884, by special act of parliament, it was changed to that of The Rathbun Company, and Mr. Rathbun became its president and assumed the complete management of the concern. The company under his direction became the poineer in many industrial enterprises in Canada, including the roller process floor mill.

The lumbering and wood-working operations of The Rathbun Company have grown wonderfully, until to-day the company owns about 550,000 acres of timber lands under Government license, 60,000 acres of deeded timber lands, and 7,750 acres of timber rights only. Mr. Rathbun's policy has always been to conserve the timber, and his economical lumbering methods have been held up as an example to to be followed by his confreres. He endeavored to educate the public as to the value of practical forestry and never missed an opportunity of emphasizing the necessity of protecting the forests from fire. His sentiments in this regard were well known, and in 1897 he was one of five who composed a commission appointed by the Ontario Government to report upon the subject of restoring and preserving the growth of white pine and other timber trees upon lands which were not adapted for agricultural purposes or for settlement. Many of the recommendations contained in their report have since been adopted by the Government.

Besides the large saw mills at Deseronto and Gravenhurst, the company operate at the former place a sash, door and blind factory, car works and charcoal plant, the latter consuming much of the waste timber from the mills. The Bay and Quinte Railway and the Kingston, Napanee and Western Railway were also built and are owned by the company, chiefly for the purpose of transporting their forest products. The company have branches at Oswego, N. Y., London and Glasgow, Toronto, Napanee, Kingston, Gananoque, Picton, Belleville, Campbellford, Lindsay and Brockville. The Canadian Portland Cement Company, whose works are at Marlbank and Strathcona, is controlled by the Rathbun Company. Of these many enterprises Mr. E. Walter Rathbun, eldest son of deceased, is now the acting general manager.

The subject of our sketch was a prominent member of the Ontario Lumbermen's Association and an influential factor in inducing the Ontario Government to adopt the manufacturing clause respecting timber which has proved so beneficial to the province.

The late Mr. Rathbun was Mayor of Deseronto from the time it was incorporated till last year. His whole business career has been identified with the upbuilding of that town, and as his business prospered the town grew. Last year he was instrumental in having canal tolls abolished on the waterways near his town. He held many important positions and at the time of his death was vice-president of the Boiler Inspection and Insurance Company, of Toronto, and a director of several other corporations. In politics he was an independent Liberal and in religion a Presbyterian, and for many years a trustee of Queen's University, Kingston. He is survived by Mrs. Rathbun and a family of seven children, E. Walter, Harold McMurrich, Marvin and Adrian Rathbun, Mrs. C. A. Masten, and two unmarried daughters, Misses Pansy and Marjorie. His three brothers predeceased him.

NATIONAL WHOLESALE LUMBER DEALERS' ASSOCIATION.

At a meeting of the Board of Trustees of the National Wholesale Lumber Dealers' Association, held in New York on November 12th, it was decided to hold the next annual meeting at Washington, D.C., the first Wednesday and Thursday in March, 1904. Full arrangements have not as yet been made, but all details have been left with the executive committee, who have power to act in the matter. The secretary of the association is Mr. F. E. Perry, 66 Broadway, New York City.

NOTES BY THE WAY.

(By Our Travelling Representative.)

From a trip through Wisconsin I came direct to Chicago, where I found great activity in the yards of the large wholesalers.

The E. S. Hartwell Lumber Company has been succeeded by the Herman H. Hettler Lumber Company. Mr. Hettler is the president, Mr. J. L. Philips is vice-president, and Mr. Ed. L. Casey the secretary. The offices, yards and mills of this vast concern are situated on Elston Avenue, Chicago, with a southern branch at Tifton, Georgia, and a northern branch at Midland, Ontario. Mr. Hettler was for a number of years the joint partner of Mr. E. S. Hartwell, and by his energy and thorough integrity, guided by sound judgment, has always commanded the respect of the lumber trade. Mr. Hettler is still a young man and began his lumber experience when a lad of sixteen. It was in 1887 that he went into business for himself with Mr. Hartwell. He is a man who studies every possibility of the lumber business, always looking for improvement. The secretary of the company is the energetic Edward L. Casey, who began his business career with the Hartwell Company and is peculiarly adapted to hold this office. The yards are very extensive and at the head of deep water navigation on the Chicago river, where vessels are readily loaded or unloaded. The Hettler Lumber Company carry a stock of lumber at all times of from 25,000,000 to 35,000,000 feet, and are able to supply almost everything on the white pine list. In addition they are heavy handlers of Norway bill stuff and hemlock, yellow pine, cypress and hardwoods. They are heavy dealers in and manufacturers of Canadian white pine lumber.

I had a pleasant visit to the offices of Houston & Curtis, situated in the magnificent Marquette Building, on Dearborn street, Chicago. There I had the pleasure of meeting the head of this progressive and up-to-date company. They are not only large manufacturers but wholesale dealers in all kinds of wagon, carriage and implement wood stock, hardwood lumber and box boards. They make a specialty of supplying axles, bolsters, reaches, tongues, sawed felloes, spokes, hubs, singletrees, yokes, wheels, shafts, etc., and enjoy a continental trade with a reputation for fairness and right dealing that holds their customers permanently.

Up at 463 West 22nd street I visited the works of the National Hoist and Machine Company, of which Mr. Parker is manager. This company manufacture derricks and hoisting engines for use around lumber mills or lumber yards. They also manufacture hooks, chains, sheaves, stump pullers, wire and cable stretchers, etc. The renowned "Parker" derrick is one of the very best known machines for the handling of timber and lumber, while its simplicity makes it cheap and within the reach of every lumber dealer.

From the "Windy City" I went to Elgin, Illinois, where the American Tower & Tank Company have recently established their works. This company make a specialty of supplying water towers and tanks to lumber mills and yards.

It was quite a journey from Elgin to Indianapolis. Here the Long-Knight Lumber Company have their headquarters. They are large manufacturers and dealers in hardwood lumber, making a specialty of cypress. Mr. W. W. Knight is the president of the company and Mr. J. M. Pritchard secretary, both well-known to the world's lumber trade. They handle Mississippi oak and ash for export and the home trade. They cater to the furniture factories, planing mills and wagon manufacturers.

The Indiana Lumber & Veneer Company are one of the largest manufacturers of quartered oak veneer (sawed and sliced) in the world. A. K. Hollowell is the president of this company and O. M. Pruitt the manager and secretary. The capacity of their mills is 100,000 feet per diem, and when I was there they were running full capacity, night and day. In the factory there is a gigantic "slicer," six veneer machines and two band mills. In the extensive yards and sheds is probably the largest stock in America, from which they fill orders to all parts of the globe. In the stock I saw immense logs of hardwood up to 5 feet in diameter. In a very cleverly written illustrated booklet, the company have a parody on "The House that Jack Built," which runs as follows :—

There were some men in the Hoosier State,
And wondrous wise were these ;
So with a saw and many draws
Sawed down some white oak trees.
But when they saw the trees were down,
With horses, power and men,
They straightway took another saw
And sawed them up again !

Then in a series of pictures they show the following views and rhymes :—

1—This is the Mill in the Hoosier State,
2—This is the timber from farmers' acres,
That is cut into logs for cabinet makers,
That came to the Mill in the Hoosier State.

3—This is the log so large and white,
That makes the "flitch" thats out-o-sight,
That came from the timber,
That came to the Mill in the Hoosier State.

4—This is the flitch quartered and clear,
That's ready to saw into fine veneer,
That came from the log,
That came from the timber,
That came to the Mill in the Hoosier State.

5—This is the saw without a nick,
That saws the veneer one-twentieth inch thick
That came from the flitch
That came from the log, etc.

6—This is the veneer that's made with pains,
That shows the flake for golden oak stains,
That came from the saw
That came from the flitch, etc.

7—This is the flake contained in oak trees,
That these men have endeavored your wishes to please,
That came from the veneer,
That came from the saw,
That came from the flitch,
That came from the log,
That came from the timber,
That came to the Mill in the Hoosier State.

We have pleasure in herewith presenting a view of "the flake" referred to. Its beautiful natural grain is shown to perfection. J. R. H.

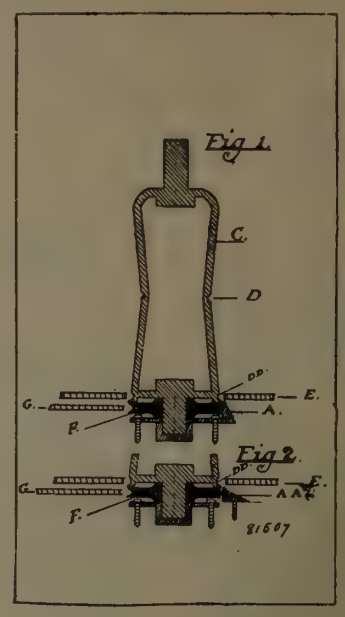
TIMBER FOR BUTTER BOXES.

Mr. J. S. Larke, Canadian Commissioner at Sydney, New South Wales, writes : "There has been some little concern as to getting supplies of timber for butter boxes, but an enquiry has shown that the supplies of white pine from New Zealand are likely to last for some years yet, though the price has gone up and is likely to be maintained. When this timber is done the spruce of British Columbia is the best substitute. The prejudice against spruce has not been overcome, and the price here is too low to induce British Columbia timber exporters to place a well seasoned parcel on the market just yet."

W. H. Gilmour, of Vancouver, B. C., is supplying the machinery for the new mill of the Arrowhead Lumber Company at Arrowhead, B.C., which will include a double cutting band mill. Mr. Gilmour is also installing machinery for the Okanagan Lumber Company, who are doubling their capacity.

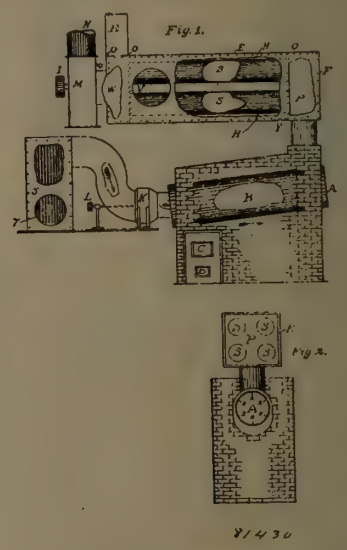
PATENTS FOR LUMBERING AND WOOD-WORKING DEVICES.

Patents have recently been granted to Canadian inventors for the following devices of interest to lumbermen and wood-workers :



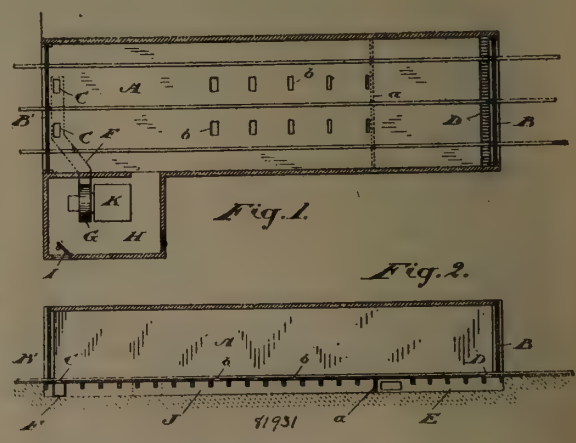
LOGGING MACHINE.

No. 81,507, to Charles T. W. Piper, of Vancouver B.C., for a logging machine, as illustrated. It consists of a logging device comprising roller C having bearings at each end, and rope groove D, sheave F, and rope guide A, all formed, arranged and combined substantially as and for the purpose set forth.



DRYING APPARATUS.

No. 81,430, to John D. McEachren, of Galt, Ont., for drying apparatus, consisting of the combination with a metallic rotary cylinder dryer B, having heat applied to its outside surface of the fan K of the heater 5, or its equivalent, also the drum E, chimney R, and exhaust fan M.



KILN FOR DRYING LUMBER.

No. 81,931, to John Stephenson, Galt, Ont., for a kiln for drying lumber. The claim is for a drying kiln, the combination of the drying chamber having moist air outlet near one end, a return flue communicating

with the drying chamber between the ends, and means for circulating air through the drying chamber and return flue, from a point at or near the end opposite the moist air outlet; an air inlet at or near the other end, both inlet and outlet being located at or near the bottom of the chamber, and means for supplying the place of air escaping from the moist air outlet, substantially as shown.

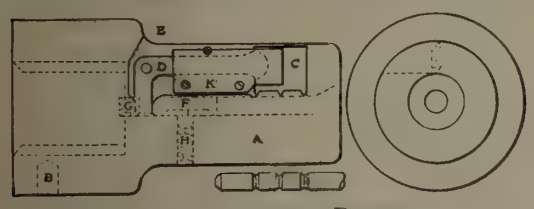
W. S. Brande and Frank J. Root, of Binghampton, N.Y., have been granted a patent in Canada for a process of making wood alcohol. It consists of subjecting wood to destructive distillation, maintaining upon the gases so produced a substantially fixed pressure slightly less than that of the atmosphere by means of a steam exhaust acting directly upon the gases not readily condensed and regulated by the tension of such gases, recovering the gases readily condensed in primary condensers, subjecting the gases not readily condensed to a definite proportion of steam, such proportion being regulated by the tension of said gases, and recovering the acids freed by the steam in a secondary condenser.

Among other patents recently granted were the following: No. 81,174, to Charles E. Evans, of Paducah, Kentucky, for a log loader; No. 81,362, to H. E. Moffatt, Woodstock, Ont., for a steam boiler; No. 81,956, to Emil Hanssler, of Webster, Iowa, for a saw mill; to E. J. Moore, of Windsor Mills, Que., for a device for cutting saw teeth; No. 81,441, to W. T. Synnot, of Philadelphia, for a match-making machine; No. 81,276, to James Cutadel, of Dallas, Texas, for band saw mechanism; No. 81,600, to Joseph E. Queen, of Queens, West Virginia, for saw mill mechanism; No. 81,520, to Edward F. Smith, of DuBois, Pennsylvania, for apparatus for leaching tan bark; No. 82,175, to G. C. Gale, of Hartford, Conn., for a machine for edging and matching lumber; No. 82,065, to Pollard & Metcalf, of Silsden, York, Eng., for a machine for grooving lumber; No. 82,115, to Ashland Iron Works, Ashland, Wis., for a drag saw frame.

TOOL FOR GROOVING DOWELS.

The device shown in the sketch was made for cutting three equidistant grooves around several thousand 15-64-inch round birch dowels. The tool was made to be used on an old speed lathe that had been laid aside. We got the head of the lathe fastened to a bench and a temporary countershaft put up and all belted so as to run our tool at a high speed.

The tool was composed of the main part A, of cast iron, threaded to fit the nose of the



TOOL FOR GROOVING DOWELS.

lathe spindle, with radial holes B for a wrench. The body, after being fitted to the spindle and turned on the outside, was bored a little larger than the dowels and turned out bell mouthed, and then was cut away almost one-quarter section for the working parts.

These parts consist of the cutter C, that is caused to slide in and out by the lever D pivoted on pin E. The tool rotates rapidly and continuously; the operator inserts the dowels one after another, pressing them against the sliding piece F, which engages with the end of lever D, forcing the cutter in aud turning the three grooves simultaneously. The cutter is made from 3-32-inch sheet steel, hardened, and the points sharpened with an oilstone. The screw G is an adjustable stop to regulate the depth of the grooves. The headless pointed screw H secures part F in place, besides permitting it a free sliding movement. The plate K, fastened bv three screws, serves as a strap to hold the lever and cutter in place without clamping them tight. The tool will groove dowels just as fast as the operator can handle them, the large bell mouth allowing a q ick insertion of them. The tool was very successful altogether, a run of 10,000 being permissible before sharpening the cutter. The lever D is so proportioned that a slight movement of F will throw the cutter in sufficient to make the grooves. We first used a small helical spring to force the cutter out, but a few trials convinced us that this was unnecessary, as centrifugal force would do this, and its presence only made more work for the boy grooving the sticks.—Correspondence American Machinist.

TRADE OPENINGS.

The August report of the Department of Trade and Commerce contains the following enquiries relating to Canadian lumber and manufactures of wood:

INQUIRIES FROM THE HIGH COMMISSIONER OF CANADA, LONDON.

Inquiry has been made for names of a number of small joinery mills in Canada who might be willing to enter into negotiations for the supply of doors, moulding, etc. (Reference No. 92.)

A Paris firm wishes to be placed in communication with producers of Canadian wood pulp desiring to be represented in that city. They are also willing to do business in other classes of Canadian goods, and to act as buyers of French goods for Canadian houses. (Reference No. 93.)

INQUIRIES EROM THE CANADIAN COMMERCIAL AGENT AT BIRMINGHAM, ENGLAND.

Large quantities of spruce and ash are wanted by a firm in Great Britain. (Reference No. 5.)

A large dealer in basswood, pine and spruce broom handles, and poplar rake and hoe handles, ash and hardwood D-shovel handles; would like to open up correspondence with manufacturers in Canada. (Reference No. 6).

A firm in Great Britain wishes to communicate with manufacturers in Canada of wooden wash boards, not metallic faced, and also clothes pegs. (Reference No. 6.)

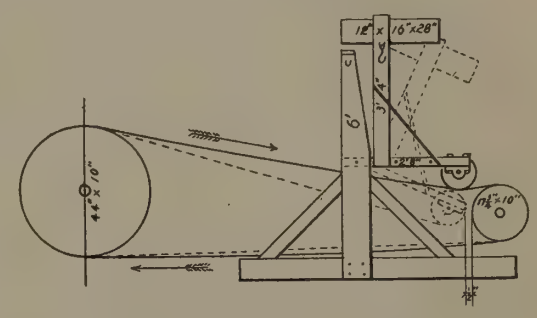
A firm in Great Britain are prepared to handle wooden products, handles, etc. (Reference No. 7.)

A firm in Great Britain wishes to communicate with manufacturers of best spruce deals, 2½ in. wide preferably, cut to thin stuff or supplied in deals, say 11 in. If not 11 in. wide, will take them any width, free from sap knots, etc. Price per standard (St. Petersburg) equalling 60 deals 12 ft. long, 11 in. wide and 3 in. thick, delivered Glasgow or Liverpool. Also pine wanted to the same specification. (Reference No. 8.)

The firm of Haley & Sons, box manufactures, St. Stephen, N. B., are building an addition to their mill, 25x65 feet. They have also purchased the old Short ship-yard containing 2¼ acres tor storing their logs.

AUTOMATIC BELT TIGHTENER.

A correspondent of Power says: I am now using a tightener arranged in the manner shown by the sketch, which I believe is doing all that could be reasonably expected of a belt of this size. The belt is a 10-inch four-ply rubber belt, 49 feet 10 inches long, running off a 44-inch driver onto a 17¾-inch driving pulley. It drives a 54-inch rotary saw, 625 revolutions, cutting Alaska red spruce. Frequently the saw is buried the whole cut without the least sign of slipping of the belt. When the saw is out of the cut, the weight that the tightener



AUTOMATIC BELT TIGHTENER.

applies to the belt is about 20 pounds. When the duty required brings the top and bottom sides within 4½ inches of each other under the tightener pulley, the weight applied to the belt by the tightener equals about 130 pounds.

Of course, the length of the tightener frame, the standard that carries the weighted box, and the weight placed in the box, governs the proportion of weight placed on the belt at different points. I find it is useless to overload with weight, and very often belts are too tight. I place my belt loose enough to give 4 to 5 inches sag in 10 to 12 feet to center, or, in other words, 5 inches sag to a belt when the centers of the two shafts are 24 feet apart.

I have seen tighteners placed on or under a belt, then a lever used to pry up and block up until the belt would almost ring if hit. Such tension takes the spring and life out of a belt, and its only friend is the belt manufacturer; it never gives a belt a rest. Place your belt tightener right, run your belt loosely, and you will get lots of work and a long life. Give your belt a rest whenever you can; it needs it.

This form of tightener may be placed on horizontal, vertical, or belts at any angle, and if properly proportioned and properly loaded will surely give satisfaction every time. Construct your tightener frame so that if the belt doesn't run squarely on the pulley the frame can be moved slightly one way or the other, and the belt will run true.

There are right and wrong ways to run a tightener on a belt. For instance, take the tightener shown and turn it around, and the first time it goes down it will be very liable to break something—that is, if it is fastened properly. By placing the tightener about 4 inches from the driven pulley and having belt slack so there will be about 5 inches sag in the center of the belt in, say, 10 to 12 feet, when the strain comes on the belt the tightener drops, as shown by the dotted lines. This gives a greater percentage of belt grip on the pulley just at the time it is required, and when the load is thrown off the tightener is at once brought back and the strain released.

LOGGING OPERATIONS THIS WINTER

Reports from Different Sections of the Dominion Indicate a General Curtailment.—Cost of Taking Out Timber Steadily Increasing and Labor Scarce.

The following communications to the CANADA LUMBERMAN show the extent to which logging operations are being carried on this winter. It will be observed that with few exceptions a policy of curtailment is being pursued.

PLAYFAIR & WHITE, Midland, Ont.: We do not think that the logging operations in our district this season will be quite as heavy as last year. The cost if anything will be a little more, as labor is even rather higher than what it was then, and the quality of the men poorer. There is also quite a shortage of labor, which will interfere with the production. We also think there are a few more logs left over at the different booms than last year, which may account for operators not putting in quite so much.

THE PEARCE COMPANY, Marmora, Ont.: The past year has been the best in our history. Labor has been scarce, however, and wages high, but indications seem to point towards a better supply this winter. Very little is being done in the woods in the immediate vicinity, and we have the field practically to ourselves. Good men are hard to find and shanty supplies are high.

GEO. G. GLADMAN, Parry Sound, Ont.: As far as I can learn the stock of log taken out this season will be from 25 to 30 per cent. less than last season, owing to the scarcity of labor and the high rate of wages. Many camps in this district have only got their full complement of men within the past two weeks and have not half the quantity on the skids at the present time that they usually have at this time of the year.

JOHN CAREW, Lindsay, Ont.: The lumbermen in this locality are not taking out as heavy a stock this season as last. This is due partly to the high wages and to the scarcity of men, that is, good bush men. The cut will not be as heavy this season as last.

JOHN FENDERSON & COMPANY, Sayabec, Que.: Prospects are very favorable for a good winter's operations and we think the cut this year will be as great as last year. The cost of the logs will be about the same as last year. Men seem to be more plentiful in this vicinity this year but wages are the same.

THE ALEXANDER GIBSON RAILWAY AND MANUFACTURING COMPANY, Marysville, N. B.: As far as we know the cut of spruce, pine and cedar will be about the same as last season and the cost per thousand will be from $1.00 to $1.50 per thousand greater, caused by increase of stumpage, increased cost of provisions, hay, oats, etc., and last but not least the very great increase in lumbermen's wages.

M. BRENNAN & SONS M'FG CO., Hamilton: We are taking out this coming season about the same amount of logs as last year. The wages are about 5 to 10 per cent. higher. We would judge that if there is favorable weather during the drawing season the output of logs in our vicinity will be about the same as last year.

THE KNIGHT BROTHERS COMPANY, Burk's Falls, Ont.: We are not in a position to speak any further than with regard to our immediate locality, regarding which we would say we consider there may be rather more taken out than last year at about the same or slightly less cost. The peculiar conditions connected with logging in our immediate locality are that there are no large stocks of pine left to be taken out, nothing but the hardwood and hemlock, with a little spruce.

J. R. BOOTH, Ottawa: Logging operations are probably being as extensively carried on, in so far as the number of camps operating is concerned, this season as last on the Ottawa river, but because of the scarcity of men most of the camps thus far this season have been running short handed, and unless the remainder of the season continues exceptionally favorable for cutting the output will not reach that of 1902-3. I have just now about succeeded in filling up my camps with workmen. Ordinarily in the past this has been accomplished between the 1st and 15th of October. The cost is bound to be much in excess of last season (which was by far the most expensive in my lumbering experience). I shall not be surprised if the cost of logging this season exceeds that of 1902-3 by 20 per cent., increased cost of labor contributing nearly the entire advance.

T. CROCKETT, Riviere-du-Loup Station, Que.: The lumber operations in this vicinity are on about a par with last year, that is, the cut will be about the same. The cost, however, I figure will be about 10 per cent. greater than last year, owing to the increased wages and the cost of supplies. The snowfall, however, has an important bearing on the cut; if we should have an unusually heavy fall of snow early it will curtail the cut somewhat. There is about 40,000,000 feet of last year's logs hung up on the streams for want of water; so, with good driving next spring there will probably be 30 per cent. more lumber go to the market next year than went this.

THE RAT PORTAGE LUMBER CO., Rat Portage, Ont. Present indications are that logging operations this winter will be even more extensive than those of last season. The weather has not been particularly favorable for getting out supplies, but in all cases sufficient have been sent in to last until the ice is fit for sleighing. Men are much more plentiful than last winter and of a better class. Wages are practically the same as last year, probably a little lower if anything. About one hundred million feet of logs will be banked for the Rat Portage mills, besides half a million ties and a large quantity of poles and piling for the C. P. R.

E. GARROW, Crown Timber Agent, Webbwood, Ont.: Regarding logging conditions in my agency, I beg to say the existing conditions are much the same as they were at this time last season. Men have been very scarce and the average wages somewhat higher than last season. Reports invariably come in with the proviso, "If we can get men." Men, however, have got more plentiful within the past ten days, and now, as a great deal of the cutting is yet to do, very much depends on the kind of winter we get; if we have a moderate amount of snow, so that cutting can proceed, the estimated output of the various lumbering firms may be fully realized, but should there be a great amount, it will interfere with the cutting, and consequently the estimates may fall short. From present indications the output in my agency, the eastern division of Algoma district, will be in the neighborhood of one hundred and thirty million feet B. M. This is a large cut for the extent of territory, but it is from 15 to 20 per cent. less than last season's cut, which was abnormally large, and somewhat smaller than the season before, which was also a large one. The cause of the decrease is owing principally to the fact that a number of firms cut out their limits last year and removed to other parts.

CHEW BROS., Midland, Ont.: While we believe that the operations are not this year generally so extensive as last year, in our particular case we are doing more. Our cut last season was less than 2,000,000 feet. This season we anticipate having from six to seven millions. We have not experienced the same difficulty in securing men for our camp labor this fall as we did last, although we think the average wage per month will be about the same. We are operating in the Township of Creighton, which is reached by the Manitoulin and North Shore Railway, running in about fourteen miles from Sudbury.

E. I. WHITE & SON, Sand River, N. S.: Logging operations will be on a larger scale in this vicinity than usual on account of very destructive forest fires last June. Probably in the vicinity of 30,000 acres in this immediate vicinity were burned over. It is improbable that there will be any more stock for the English market, but more stock for the United States, as operators will cut smaller timber. The cost will probably be more per thousand than last year.

W. C. EDWARDS & CO., Rockland, Ont.: It is our opinion that a less quantity of lumber will be taken out on the Ottawa the coming winter than the past winter, and there is one thing we know as an absolute certainty, that it will be taken out at an enormously increased cost.

PEMBROKE LUMBER CO., Pembroke, Ont.: We consider the logging operations in this district to have experienced very favorable conditions, as we have had a very excelled fall, but labor was very scarce in the first part of the season, which has handicapped us some. At present we have sufficient men in the woods, and on the whole expect that we shall have a very good season. We expect to get out about twice the number of logs we took out last year, but we do not think this is the case with most of the firms, owing to the labor market. There will be a small additional cost in operating all over this district, owing to the small amount of work to be obtained from the men as compared with former years.

E. J. DARBY, Crown Timber Agent, Ottawa: It is a little too early to give definite information, as the assistant rangers are not yet at work, but from present appearances the output will be about the same as last season should the weather conditions continue favorable. The cost of production per thousand will be slightly higher than last season, owing to provisions and wages being higher. Should the limits along the Temiscaming line of railway that are for sale on 9th of next month be operated on this season the production of square and waney timber will show an increase from last season.

THE GEORGIAN BAY LUMBER COMPANY, Waubaushene, Ont.: So far as we are able to judge the cut of logs this season will be much less than last season, and the cut last season was not large. This is chiefly brought about by the condition of the labor market, which is most unsatisfactory. Men are very unsteady in their work, and will not in many cases try to do a fair day's work though they receive high wages. They appear to prefer travelling around from place to place to being steadily employed. Horses, as well as supplies of all kinds, are high. The timber supply is getting further away from the mills, and this adds greatly to the expense of taking it out. We would not be surprised to find that this season's output of saw logs was one quarter less than last season.

THE CLEVELAND-SARNIA SAW MILLS CO., Sarnia, Ont.: In our locality we find the conditions of lumbering practically the same as last year. Wages are running about the same. In some cases operators are offering from $1.00 to $2.00 per month more than last year. We find it not as hard to secure men for the woods this year as last, but do not think that they are quite as good a class of men as the average last year. We are having more or less difficulty in getting experienced teamsters and hook men. We cannot see that the cost of logging will be reduced any this year from last. Taking it on a whole, we do not think that there will be quite as many logs put in this year.

H. CARGILL & SON, Cargill, Ont: Logging operations in this section do not commence until snow comes, and the output altogether depends upon the length and steadiness of the weather during winter. We do not anticipate that there will be as much as usual put into the mills this year. Men are very scarce and wages higher than ever before in this section.

AN OTTAWA VALLEY MANUFACTURER: Our logging operations on the whole will be less than last year. Wages have been abnormally high, and what is even worse, the class of men as a rule are very inferior, many boys or very young men who under regular conditions would not be hired at all. Supplies are also very high, all of which is going to greatly affect the cost of production, and as to labor the number of logs. We think that the output will be considerably less than in 1903. I speak for the Ottawa Valley in particular. Prices of lumber are very firm, stocks on hand unsold are very small, with us smaller than usual. Owing to

the greatly increased cost of production prices must advance if lumbermen are to make anything, or else manufacturing be curtailed. Ottawa mill men have decided that they must have an advance of from 12 to 15 per cent. for deals. Considering the cost of stumpage, enormous extra cost in producing the log, and also considering that the largest and best logs only are taken for deals and to make a very reasonable return to the manufacturer, this advance would be rather under than over the mark.

THE C. BECK MFG. CO., Penetanguishene, Ont: Our operations will be on about the same scale as last year, or perhaps a little larger. We were handicapped a little the early part of the cutting season for lack of men, but are now in a better position, and expect to get our full stock out. As a rule, we think operations have been curtailed somewhat this season.

A GEORGIAN BAY MANUFACTURER: So far as we are concerned we went into the bush earlier than usual but have not so many logs skidded as last year at this time. Men have been hard to get and since the wages got so high they do less work, the result being stocks are costing too much to get out. The mill men should early in the fall fix the wages and not be bidding against each other; this kind of thing makes men uneasy and they are continually jumping from one camp to another, which means expense to the lumbermen.

OTTAWA VALLEY MANUFACTURER: Wages have advanced 20 per cent. and this will affect cost of hay and oats, as the greater part of the cost of these to us is the hauling from railway. Other supplies about as last year. We are only doing about 75 per cent. of last year's business owing to increased cost, and trying to work only our own horses and not use any hired ones. Think these conditions are general in this district.

THE HANBURY MANUFACTURING CO., Brandon, Man.: So far this winter has been very favorable for our logging operations. We have plenty of snow now for skidding and hauling, although we have not yet started hauling. Men are plentiful and wages are inclined to be lower. We are paying from $20 to $30 and think that the average will be $24 or $25 per month and board. The wages on the American side will average about $22 per month this year, which is the cause of men being plentiful here. We hope to take out a large cut this year.

THROUGH WISCONSIN.

(BY OUR TRAVELLING REPRESENTATIVE).

Wisconsin has lost her supremacy as the leading white pine producing state, and this honor now lies with Minnesota. In fact, Wisconsin is being rapidly cut out.

Although most of the timber around Marinette had been cut years ago, Marinette lumbermen will enjoy the experience of again seeing logging this winter. Gagnon & Dumville have contracted to put in 2,000,000 feet near Goll, Wis., and the logs will be hauled and dumped into the Menominee river just a mile from the city limits of Marinette.

The following word-picture of the life of the lumberman, which I saw in the Eau Claire Leader, presents current conditions in Wisconsin:—"Never forget early habits is a net which entangles us all more or less in its mesh, and what's bred in the bone won't come out of the flesh. The pioneers of the lumber industry in Michigan and Wisconsin came from the state of Maine, where lumbering constituted the chief industry of the people. These men created a mighty empire in the north-west which is now crumbling away owing to the disappearance of the pine. Most of them have made a decent competence and could retire from business but that would not suit. They love the smell of turpentine too well, so they take up timber limits on the Pacific slope and erect new mills. Nearly all of the great lumber concerns are purchasing limits in Washington and some are already moving their plants there. The crash of the falling pine is music in the ears of these men. They will follow up until they get the last tree. Well, why not? In this respect, how do the lumbermen differ from men in any other line of business?"

Out in Wisconsin a certain justice some time ago vacated his office, moved into the country and siarted dealing in timber lands. This industry having petered out he tried selling lumber, but says he could get none to sell. Then becoming disgusted, he moved back to his old office last spring and was re-elected. Under the heading "BACK FROM THE WOODS" this is the advertisement he had in the papers:—"All those persons who may wish to get married or arrested, or if out of a law suit and want to get in, or if already in and wish to get out, please walk up the stairs of the Union block. The expense in either case is about the same, and in many instances the results bear a strange similarity. Charges reasonable in any event."

At Oshkosh I visited the great sleigh and wagon works of A. Streich & Bro. and Gabriel Streich. The latter makes a specialty of logging carts and sleighs, logging wagons and trucks, doing an immense business in this line.

The town of Phillips turned out to see the big load of logs which was brought in from Camp No. 2 of John R. Davis Lumber Company, of which Joe Hunter is foreman. The load was expected in the afternoon but did not arrive until late in the evening. The delay was caused by having to clear out the trees which stood too near the road and in getting up one large hill where it required thirteen teams to pull it. This great monster of a load was loaded by Joe Hunter and John Murphy and consisted of 114 logs, which scaled 16,860 feet. It was a marvelous piece of work and one wonders how they got them there, as the load was all of 20 feet high. This gigantic load of hemlock was hauled a distance of twelve miles by four horses which were driven by A. LaFontain, except up one or two hills where more horses were required. On one of these hills it required twenty-six horses. The sleighs were made by Gabrie Streich, of Oshkosh, and carried a twenty foot bunk, so that the base of the load was about fifteen feet wide. While this is not the largest load ever hauled in this vicinity, yet it is the largest ever hauled so great a distance. We have pleasure in presenting a view taken from a photograph on the occasion. It speaks well for Gabriel Streich's sleighs.

MONSTER LOAD OF HEMLOCK HAULED ON A GABRIEL STREICH LOGGING SLEIGH.

At Fond du Lac I visited the immense works of the B. F. & H. L. Sweet Company, who make lumber wagons and sleighs. This firm has a splendid reputation, not only in Wisconsin but throughout the north-west, for the work they put out. Their patent lumber wagon is a new thing and merits attention, as one man can unload a heavy load of lumber inside of two minutes without unhitching or uncoupling. The bed is provided with a main roller, pinions and crank; this roller is fitted with vanes or ribs which do not injure the lumber. There are also two smooth rollers to supplement the main roller. By turning the crank the load is moved back until it balances on the hind axle, when the bed with the load tips, allowing the back end to strike the ground. The driver then starts up his team and the wagon moves out from under the load easily, the bed forming an inclined plane, down which the forward end of the load slips until it reaches the ground, thus avoiding any drop whatever. As there is no jar, the lumber is left on the ground in just as good order as if piled with the greatest care. The Sweet Company also make a patent buck-board. I had the pleasure of sitting in one of these and must say it is a capital one for use of hunters, lumbermen, cruisers or surveyors. Other high grade vehicles made by this company include lumber buggies and trucks, haul-off and dump wagons, slab and saw-dust carts, etc. We present in this number a cut of one of the logging sleighs.

At Milwaukee there was nothing doing on Lake Michigan except the cargoing of lumber. The lumber trade, I was told, was the only encouraging feature of lake commerce. Many of the owners of lumber vessels recouped the losses they had incurred owing to the previously dull season. Large quantities came in from the Georgian Bay region to the lower lake ports. Milwaukee and Chicago are getting a lot of Canadian pine and seventeen vessels arrived in Chicago in one day lumber-laden. This I believe was a record day.

On account of the dullness and uncertainty in the building trades the heavy dealers in lumber have been very slow to stock up. The lack of demand has enabled the Chicago yards to make heavy purchases to hold for future demands. The Report of the Bureau of Statistics, Department of Commerce and Labor, for September contains an interesting review of the internal commerce of the United States, a feature of which is a statement of the receipts of lumber at ports on the great lakes for the first eight months of the year. Milwaukee does not rank high in the list.

Port.	Feet.
Buffalo	70,868,000
Tonawanda	47,380,000
Chicago	179,263,000
Cleveland	229,137,000
Detroit	40,605,000
Frankford	49,437,000
Ludington	79,398,000
Milwaukee	62,740,000
Toledo	34,471,000
Michigan City	27,937,000
Total	1,105,171,000

The top notch in lumber shipments for the season was reacned at Ashland, when a fleet of twelve vessels, loaded with 12,700,000 feet of lumber, left the port on the same day. Eight of them went to the lower lakes and four to Lake Michigan.

At Milwaukee I had the great pleasure of meeting Mr. Frank N. Snell, one of the city's well-known lumbermen. He gave me a pleasant day's visit to the city and made me acquainted with many of the lumber "kings." Frank is a real good soul, which accounts for his being Senior Hoo-Hoo. Everyone in the lumber line knows him and they all expect he will be Snark of the Universe at St. Louis next year.

I also met Mr. C. C. Johnston, who is treasurer of the South Arm Lumber Company. This company operates at Marquette, Mich., owning mills and timber lands in that vicintity.

The American Hardwood Lumber Company, of Madison, are one of the large concerns in the interior. I met the genial vice-president, Mr. W. S. Heddles, who said the company were well satisfied with the season's work.

Racine was formerly a lumber shipping point, but very little goes out now, and more goes in. From this point I went direct to Chicago, passing Dowie's famous Zion City. As we approached the place I noticed an enormous sign-board labelled "ZION CITY—Northern Boundary." The city is assuming metropolitan proportions, and although people may talk of Dowie and his methods, he has a clean, beautiful town. As I passed I noticed on signs "Zion City Planing Mill" and "Zion City Lumber Yards," both of which, I was informed, were owned and run by the Zionists.

Running into Chicago by the North-western line one is impressed by the great floating population of Chicago, which ebbs back and forth into the great city. Commuters trains by hundreds take the toilers to their suburban residences. On the way in I passed a "Daily MilkExpress," consisting of fifteen refrigerator cars laden with fresh milk brought over a hundred miles to help feed Chicago.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance... $1.00
One Copy, Weekly and Monthly, Six Months, in advance.. 50
Foreign Subscription, $2.00 a Year.
ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

DEVELOPMENT OF THE HARDWOOD TRADE.

The status of the Canadian hardwood lumber trade is not by any means all that might be desired. Manufacturers have been able to dispose of their output, and in most instances, in late years at least, at some margin of profit, but neither the manufacturers nor the community at large have realized the full measure of benefit from the cutting of the timber. Too much of it has been exported in a semi-manufactured condition instead of being worked up into the smaller stuff for which there is such a large market in Great Britain and elsewhere. So great is the demand for this class of material that a number of importing firms have sent representatives to this country solely for the purpose of reporting upon the possibility of obtaining supplies here. From personal conversation we know that some of them have been disappointed and have so reported. And why? Not that there was an insufficient quantity of hardwoods to be found, but because the hardwood trade did not seem to be organized as it should be; there was no uniformity in prices; no association to demand recognition for the hardwood trade; and no uniform rules for grading the lumber. Every manufacturer makes his own grade and his own price, and frequently these are so wide apart as to cause astonishment to the Canadian buyer, not to speak of the Britisher who is not familar with our methods.

Contrast these conditions with those which the buyer finds when he steps across the line. A National Hardwood Association for the entire country; uniform prices at all the leading centres, and rules of inspection which are recognized from north to south and from east to west. Is it any wonder that business originally intended for us is placed with our neighbors?

How to remedy the existing conditions is a problem diffcult of solution. There are a vast number of small hardwood mills widely scattered throughout the Dominion, making it almost impossible to organize them. Perhaps the best that could be done would be to form provincial associations and adopt standard inspection rules. This in itself would be of great benefit to the hardwood industry, and doubtless it could be accomplished if a few of the leading manufacturers would only take the matter up.

THE LOG INPUT.

For some years the lumber business has enjoyed prosperity and the country at large has been benefitted by the increased activity. Manufacturers, store-keepers and business firms generally have shared the profits with the timber operators and saw mill owners. That the lumber business may continue to prosper is mucho be desired, for no branch of manufacturing exerts a wider and more potent influence upon industrial conditions. In the interest of such desire, it is sincerely to be hoped that the threatened reduction in the input of logs this winter may be realized. Volume does not mean profit, and there are reasons why a curtailment should be the policy pursued.

There is no denying the fact that the United States is at the present time passing through a period of industrial depression. How long it may continue and whether it shall become more serious are questions which no person can answer with any degree of certainty, but it was only reasonable to expect some reaction after the high tide of prosperity which has prevailed for the past two or three years in the United States and to a lesser extent in Canada. While prices of lumber have not yet receded to any extent, there will no doubt be a readjustment provided the industrial depression continues for any length of time. Nor can it be argued with reason that this country would escape the effects of bad times across the line.

Further, the owner of standing timber has in it an asset which is gradually increasing in value. It is not necessary that he should turn it into the manufactured product in order to increase its value. He should remember that the supply is not inexhaustible and that the timber does not reproduce itself excepting at long intervals. In that respect it differs from many other materials which furnish the raw product of the manufacturer, such as cotton, wheat, corn, etc.

Elsewhere in this issue will be found letters from several manufacturers telling of their proposed logging operations. Increased stumpage dues and excessive cost of labor and provisions are prime factors in the decision of many to reduce their cut. Apart from these items of expense, the cost of logging is much greater than a few years ago. Although the bushman is paid a much higher wage he is disposed to work more leisurely and does not accomplish some say within 50 per cent. of as much work as the woodsman of ten years ago. The fact that much of the timber adjacent to the streams has been cut is another factor which increases the cost of getting logs to the mill.

From present appearances there will be no over-production of logs this winter, a condition which is much to be desired, for a continuation of production in the same ratio as in the past two or three years might place lumbermen in an unenviable position should there be a marked falling off in consumption.

UNFAIR COMPETITION.

The vigorous steps that were taken about two years ago by the lumber manufacturers of British Columbia to secure the imposition of a duty on United States lumber coming into Canada were not successful, the government not wishing to disturb the prosperous conditions then prevailing. Since that time very little has been heard of the matter, but certain interests have been working quietly with the object of strengthening their position and making another effort for a duty at an opportune time. This time has now arrived, and it is some satisfaction to learn that it is proposed to put up another determined fight to gain some protection for the lumber business.

The productive capacity of the mills of Canada has been greatly increased within the last three years. This applies more particularly to the province of British Columbia, where many new mills of large capacity have been erected. The spirit of progress has, we fear, not always been tempered with wisdom. In too many instances investments have been made in lumbering enterprises without due consideration of the prospects for a remunerative business when times should become less prosperous, a condition which was almost certain to arise. It may be said, however, that in the expected future development of Manitoba and the North-West Territories there was sufficient ground to encourage investment in mills to supply that promising market.

A growth of industrial establishments is to be desired, but when such growth exceeds the requirements of the available market a policy of retrenchment should be pursued until natural laws bring about a change in conditions. The combined capacity of the British Columbia mills catering to the car trade is estimated at 800,000,000 feet of lumber and 800,000,000 shingles per annum, while the present consnming capacity is about 600,000,000 feet of lumber and 500,000,000 shingles. It is plainly evident that production has increased at too rapid a rate and that some steps must be taken to limit the output. The situation has been intensified, moreover, by the fact that United States mills, being unable to dispose of all their output in that country, are using the Canadian market as a dumping ground for their surplus products, even offering them below the cost of production. This competition is encouraged by the Dominion Government, which has so far refused, or neglected, to place an import duty on United States lumber and thus place the Canadian manufacturer on an equal footing with his confrere across the border.

The United States manufacturer has also an advantage in supplying the Manitoba market

on account of a lower freight rate. The rate from the British Columbia mills west of the mountains is forty cents per hundred, and from the mills in the eastern part of the province thirty-three cents. Most points in Manitoba can be reached by the Minnesota mills on a sixteen cent rate.

Unless some protection is afforded by the government, the lumber industry of Canada is likely to suffer to a considerable extent during any period of commercial and industrial depression which may occur in the United States, and there are now some indications that such depression is not far distant. The export of lumber from this country would be greatly diminished, while no doubt we would suffer severe competition in the home market on account of there being no duty as a protection. Many of our mechanics and laboring people would be thrown out of employment and the progress of the lumber industry be seriously hampered. All that is asked is a duty equivalent to that imposed on Canadian lumber shipped to the United States.

EDITORIAL NOTES.

In a recent issue of THE LUMBERMAN it was stated that Mr. Louis Miller had disposed of his entire timber holdings in Newfoundland and returned to Scotland. The statement was ventured that much of the timber in Newfoundland did not compare in quality with that in Canada, a consideration which it was surmised had determined Mr. Miller to withdraw from that field. How far this is correct may be judged from the fact that within the past month he has purchased an extensive timber property in Nova Scotia, with the intention, it is said, of carrying on lumbering operations on a large scale. He is also reported to hold options on other properties in Nova Scotia and New Brunswick.

The cutting down of trees is accomplished in this country by means of the axe or the saw, the latter being employed only to a limited extent and being confined almost exclusively to the Maritime Provinces. Some interesting and successful experiments have recently been made in France in cutting trees by means of electricity. A platinum wire is heated to a white heat by an electric current and used like a saw. In this manner it is said the tree is felled much more easily and quickly than by the old method of axe or saw, and the slight carbonization caused by the hot wire acts as a preservative of the end of the timber, preventing it from checking. It is claimed to require only one-eighth of the time consumed by the sawing process. We are not told in what manner the electric current is obtained.

The dangerous period for forest fires is from May to October. This season has just been passed, and with a record of few serious fires. To what extent the fire ranging system and the greater precautions taken by settlers and hunters contributed to this result will not be known until the official reports are submitted to the different governments, but it is quite evident that the public are beginning to recognize the wisdom and necessity of protecting our forests from fire. The Canadian Forestry Association is doing splendid work in diffusing information along this line, and it is a very great pleasure to the CANADA LUMBERMAN to learn of the financial assistance which has been rendered the association by the various Canadian governments. The money so granted will no doubt prove a profitable investment.

The sale of timber limits to be held by the Ontario Government on December 9th has aroused not only a Dominion but an international interest. Ontario lumbermen will not alone be the bidders for the valuable areas of pine timber, as applications for maps and conditions of sale have been received by the government from many outside parties. The decision to extend the time allowed for cutting the timber from ten to fifteen years is doubtless a wise step. The fixing of a period of ten years in which to cut the timber on such a vast territory would be likely to result in the sacrifice of an asset of ever-increasing value. In some quarters speculation is indulged in as to whether the increase in the rate of stumpage dues to two dollars per thousand feet will not affect the bonus or purchase price. If this should de the case the government would not profit by the increased dues. The first outlay by the purchaser would not be as heavy, but he would be obliged to pay a larger amount as the timber was cut.

The advocates of preferential tariffs may contend with reason that as yet the plan has not received a fair test. Were it otherwise the figures of imports into Canada from the United Kingdom and the United States since the passing of the Canadian preferential tariff law might be construed as an argument against duty preferences. The imports from the United Kingdom have increased in value from $29,000,000 in 1897, when the Canadian preference was established, to $65,000,000 for the year ending June 30, 1903. The imports from the United States increased in that period from $61,000,000 to $137,000,000. It must be admitted, however, that the United States has pushed out for Canadian trade more energetically and systematically than has great Britain. This fact is now being realized by the British manufacturers, and we may expect a different showing in the near future. In this connection Canadians shonld endeavor to take every possible advantage of the preferential tariff which has this year been put into operation in British South Africa. In this country also the United States have secured a strong foothold, having increased her exports from $3,638,000 in 1893 to $29,000,000 in 1902, or an increase in ten years of nearly one thousand per cent.

An ingenious country lumber merchant on the other side of the line who wished to establish a claim for inferior quality of a certain lumber shipment had the boards photographed, showing knots, etc., and forwarded prints of these pictures with his claim. His case was unanswerable.

FITTING SHINGLE SAWS.

On reading a late number of The Wood-Worker I notice a request from a filer who claims he is in need of general experience with shingle saws, and, for the benefit of my fellow-workman, I will try to explain the care of shingle saws from the anvil until they reach the machine for cutting. With many years of experience in this line, I find it very necessary to carefully do the hammering and filing. My work now is filling band saws, and I think it takes as much experience with large thin shingle saws, and perhaps more, than for band saws.

When I commence hammering shingle saws I use first a 16-inch straightedge and a pin on the side of my anvil to swing the saw upright. Use the straightedge all the time thoughout the work on the side of the saw; find the lumps around the saw and level them, then mark on opposite side and strike with a hammer on each place till the saw becomes as nearly level as possible.

Now lay the saw on the anvil and work the tension to an even circle from the rim to center. Use a straightedge that will reach from center to rim. Half way the saw should drop from straightedge about three thicknesses of a postal card. Now use the 16-inch straightedge again straight acoss the center of the saw, pulling up on tne edge with the other hand. See that the center of the saw will drop away at center to let a piece of writing paper slide under freely.

This must be done on both sides. Should your work cause the saw to drop away too far from the straightedge at center, use your straight-face hammer, pointing from center to rim, about 3 inches from the teeth of the saw, on any lumps that may be found. This will raise the eye much quicker and with less hammering than with a round-face hammer, and not interfere with the tension. When the saw has even tension and eye, is perfectly straight from one side to the other in any way you put a straightedge on it, it is ready to place on the collar, but before putting it on the collar see that the face of the collar is straight from center to edge —that it is not saucer-shape. If your collar is straight, it is all right; if not, use writing paper where it is needed to make it true. If your saw is saucer-shape to the cut it will buckle when passing through.

Now for filing. See that your grinder is perfectly square with the blade of the saw; that the center of the mandrel, when cutting, is directly over the center of the saw; that the tooth may be ground square and the back of the tooth filed with about 30 degrees bevel; that you have a good round throat, the back a little round so that the saw will not jerk when striking knots and not spring when in heavy cuts.

There should be a goose-neck gauge used for setting, with a scew on each side of the saw, so you can use a piece of thin iron wedge under the screws for set on each side of the saw. That is, should the saw be 16-gauge, the entire cut should be from 12 to 13 for clearance for sawdust.

Now for lead. Start the machine, cut a shingle and pass the machine as near the eye as possible, with the spalt held fast. See that it clears the center about 1/32-inch, or close to it. Your saw is now ready to do its duty, and will run easily, cut smoothly and stand nearly all the feed that can be put to it.

EMERY WHEELS FOR BAND SAWS.

Inregard to proper speed for wheels of ordinary grades for saw sharpening, general practice, says Packages, recommends the following approximate speeds: 14 inch, at 1,300; 12 inch, 1,500; 10 inch, 1,800; 8 inch, 2,400; 6 inch, 3,000. But a faster speed for soft wheels and a slower one for hard wheels often renders a wheel otherwise condemned entirely satisfactory. A wheel of medium hardness is perferable for saw sharpening, since it will cut quicker and heat and glaze less than a hard one, though it will wear out a little sooner. A hard wheel, if run too rapidly, will produce, to a greater or less extent, a case-hardening which cannot be touched with a file, and from which cracks are likely to result. When the color of the steel goes beyond a blue, under the action of the emery wheel, the steel is red hot and hardens.

There is much in the selection of emery wheels of good grade, and much in keeping the wheel in condition to cut freely without undue feeding to saw. The perfect wheel will cut freely without tendency to glaze or fill up with the minute particles of dust and steel. It holds its shape without frequent dressing. Its finishing cut should leave the tooth unblued and free from burn or roughness. A saw sharpener with motion such that the emery wheel stops long in bottom of throat, is objectionable, as this is exceedingly apt to heat or case-harden the saw at base of the teeth.

Then, if the gullet is not well rounded, it offers an opportunity for cracking. An 18-gauge saw requires a finer-graded wheel than one of 14-gauge or heavier, so that the wheel may grind to a fine edge without blueing the points of teeth or leaving a course wire edge. A coarse wheel will not leave a smooth surface to the edge of the teeth, and, consequently, the saw will not cut so well. If the wheel is too fine for the gauge of the saw to be ground, it will glaze and blue the gullet and point with the slightest grinding. A soft wheel is very objectionable, for it will wear away a trifle on each tooth, making it impossible to maintain the desired shape, and, as a result, the hook will be run out and there will be no uniformity between the teeth on a saw or between the different saws. Having a sharpener equipped with a number of different speeds, and perhaps driven by a separate engine, it should be possible to properly speed wheels of fair quality to suit their size and the work.

The use of emery wheels with the face concaved is recommended to those who carry considerable hook in their saws, as wheels thus faced will hold their shape with less requirement for dressing than straight-faced wheels. When facing an emery wheel with the dresser, avoid undue pressure. If the wheel is allowed to trace the entire surface of the tooth, in grinding, its shape and that of the teeth will be better preserved. The teeth will be ground up to a sharp keen edge, every tooth alike, and the uniform width of the saw maintained. The use of a sharpener simply for face grinding or as a gumming machine, will result in having no two saws with teeth shaped alike. But if you have a sharpener that will not grind to a sharp point, and you are obliged to face with the machine and point the back with the file, see that the saw is kept properly jointed.

The less that a file is used on the teeth, the better, unless for lightly pointing off a feather edge, and with a good machine and a good wheel this should be unnecessary. In general, the use of an upset should be avoided, as it makes the teeth of uneven length and prevents a uniform grinding. The use ot a face swage requires a greater amount of face grinding, and renders the preservation of hook more difficult, than the use of a top swage. If you use a face swage, and the logs are gravelly, requiring a frequent swaging, and a consequent large amount of face grinding, you are likely to run the teeth back too fast and make them too slim, with a tendency to dodge or vibrate, and must shape the grinding to avoid this.

Always keep a good-sized gullet so that the dust will clear easily. The teeth should never be allowed to get short and stubby, or without the proper amount of hook, as they will do less work and take more power, and the saw has a greater tendency to bind and heat, owing to the want of sufficient room in the gullets for the saw dust to escape rapidly. If you have occasion to grind in a deep gullet, a coarse wheel may be employed, to be followed up with a fine grit wheel for finishing and pointing.

In sharpening saws, the pressure of the emery wheel shouldbe light on the work. It is erroneous to suppose that the heavy pressure produces rapid cutting; it simply results in the glazing of the wheel and the hardening or burning of the teeth, which will then crumble or fracture in the cut or when swaging. If a saw has been badly fitted, and it is necessary to remove such metal, instead of forcing the wheel as hard as possible to the plate and making it red or blue from the heat, the work should be gone over lightly a number of times.

Having a saw with teeth uniform, you should, after swaging, place the saw on sharpener and grind around once to remove any feather edge resulting from swaging, then side-dress with a pressure side-dresser, and then finish sharpening. If any teeth have been bent in swaging or from other cose, straighten them. A saw will cut smoother, stand more feed, and run longer when side-dressed with pressure side-dresser than by any other method. Constant attention to the matter of keeping the teeth exactly alike and perfectly fitted, is essential to a fine cutting saw.

COST OF MANUFACTURING COOPERAGE STOCK.

Mr. E.C. Chittenden, of Ashley, Mich., submitted to the Slack Cooperage Stock Association some figures as to the cost of manufacturing slack cooperage stock, reporting as follows:

"We made a test of the amount of staves produced from twenty-seven cords of bolts, which were round elm 32 in. long, cut from timber after hoop timber was taken out, which produced 24,433 staves.

Cost of bolts, 27 cords at $3.00 per cord	$81.00
Cost of manufacturing 25,433 staves at $2.00	50.86
	$131.86
Above produced 11,550 No. 1 28½ in. staves at $6.50 a 1,000	$75.07
Above produced 13,883 No. 2 28½ in. staves at $3.50 a 1,000	48.59
Loss on day's cut	8.20
	$131.86

"We also made a test on heading. We took one cord of hardwood bolts, 40 in. long, which we turned into mill-run 19⅛ in. heading, which produced 176 sets of heads which cost as follows:

One cord of 40 in. bolts	$3.00
Cost of manufacture, wire, loading, etc., 176 sets heading at 2½ cents	4.40
	$7.40
176 sets headings sold at 4¼ cents per set	$7.40
Margin left	.08

FACTORY FLOORING

KILN DRIED BIRCH, ABOUT 60 M. Box 442 CANADA LUMBERMAN.

TIMBER LIMIT FOR SALE

ONE HUNDRED AND FIFTY MILLION feet of good sound healthy timber. About 10 million white pine, 80 million cedar; balance hemlock. For particulars apply to P. J. GALLAGHER, Rossbery, B. C.

FOR SALE

SEVERAL LARGE TIMBER LIMITS ON the Kootenay Lakes and along Crows' Nest line of C. P. R. Most available timber for Northwest trade. For particulars, apply to D. I. DEWAR, Nelson, B. C.

PINE LUMBER WANTED

I desire to purchase a quanity of inch mill culls and inch dead cull pine sidings. Terms cash when shipped. Please state quantity and price and freight rate to Toronto. Box 43 CANADA LUMBERMAN.

Mill Machinery For Sale

CIRCULAR SAW FRAME, CARRIAGE WITH Track 3 Saw Edger, Slab Slasher with 5 Saws, Trimmers, Double Lath Mill, Shingle Mill, Endless Chain and Bullwheel. 4 Water Wheels, Shafting, Pulleys, Gears, Belting, Conveyor Chain, Giant Planer, Hashing Mill, Iron Turning Lathe. JOHN KNIGHT, Douglas, Ont.

Timber For Sale

3000 White Pine Logs near Cartier Station, C.P.R. main line, with first class piling ground, suitable for Portable Mill. About 5000 White Pine Logs in Booms at mouth of Spanish River, and about 3000 Acres of good Timber, very nearly all White Pine. [PINE] LUMBER COMPANY, Cartier, Ont.

Birch Lumber

Manufactured specially for the Furniture Trade in all sizes and grades. Write to THE HUNTSVILLE SYNDICATE for prices, Huntsville, Ont.

FOR SALE — 10 000,000 FEET GOOD TIMBER, some Clear Pine, short haul, all convenient, no dues and good Saw Mill, for $20,000. Address PRIVATE BOX "D," Thessalon, Ont.

FOR SALE — ABOUT 270 000 FEET DRY White Pine Lumber 1" 1½" and 2" Cut from good quality logs and well manufactured; also quantity dry XXX and XX White Pine Shingles. Apply THE HUNTSVILLE SYNDICATE, Huntsville, Ont.

WANTED

AT ONCE, IN CAR LOTS, THE FOLLOWING Dry Lumber :
Soft Elm, 1", 1½", 2", 3".
Maple, Birch or Beech, 1½", 3", 4".
Basswood, 1", 3".
This lumber will do in any lengths, from 3 ft. up; state grade and price. Address TAYLOR & LOUNT, Markham, Ont.

MACHINERY FOR SALE

1 Large 4 Sided Sticker; 1 10" Buzz Planer; 7 Improved Mortisers; 1 24" Surface Planer; 1 Cowan Matcher; 1 Band Saw; 1 Shaper; 1 Turning Lathe; 1 Jig Saw Machine; 1 Tenon Machine, for doors and windows; 1 Tenon Machine for blinds; 1 Mortiser for blinds; 1 Staple Driver for blinds; 2 Saw Tables. A. H. CUMMINGS & SON, Coaticook, Que.

TENDERS FOR TIMBER AND PLANKS

Tenders, sealed and endorsed "Tender for Timber," addressed to the undersigned, will be received up to 12 o'clock noon on MONDAY, 7TH DECEMBER, 1903, for

TIMBER AND PLANKS FOR 1904.

Specifications and Blank Tenders may be obtained upon application to Mr. John Kennedy, Chief Engineer, at this office.

The Commissioners reserve the right to reject any or all of the tenders received.

DAVID SEATH,
Secretary-Treasurer,
Harbor Commissioners.

57 Common Street.
Montreal, 19th Nov., 1903.

REBUILT MACHINERY

Taken in course of business during the year, offered cheap; thoroughly refitted.

Pony Band single cutter
2 and 3 block Heavy Carriage with offset
3 block Allis Carriage with offset
Twin Circulars, will cut two thousand ties daily
10 x 16, 12 x 20 Cunningham Feeds
Number Six Hog; Single Disc Hog; heavy Independent Feedworks; Large Hill Niggers: Pony Nigger
Circular Resaw; Covel Circular Filer
Sawmill Engines, 22x26, 18x24, 16x20, 12½x18
Return Tubular Boilers, 2-72x16, 2-54x16
3 400 Horse Heavy Boilers
7 48x26 foot 2 Flue Boilers
Offered cheap.

WATEROUS, BRANTFORD

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

To Timber Manufac'urers and Exporters

THE ADVERTISER, A CANADIAN, HAVING had 18 years' experience as salesman and broker in the timber trade in Great Britain, with previous experience in Boston and Burlington, Vermont, is desirous of returning to Canada and would be pleased to hear of an opening where his experience and services would command reasonable remuneration. Age 40, married. Can offer undeniable recommendations. Address in first instance, "Experience," care of CANADA LUMBERMAN, Toronto or Montreal.

CURRENT TRADE CONDITIONS.

ONTARIO.

The volume of the lumber business of the month of November was, all things considered, better than could reasonably have been expected. The buying power was, perhaps, not as good as that of the previous month, but still of a very satisfactory character. The past week has shown signs of a slackening up, and it is likely that a smaller trade will be handled from this time forward until after the turn of the year. Little change either in demand or prices need be expected in the near future.

The deadlock between the Ottawa Valley manufacturers and the British exporters has been broken. The 1904 deal cut of the Hull Lumber Company has been placed with Watson & Todd, while half of the J. R. Booth cut has been taken by Robert Cox & Company. In both instances an advance of ten per cent. on last season's figures is reported to have been obtained.

We do not think that prices of hemlock are quite as firm as they were, but there is no positive weakness to be observed. Hardwoods are strong notwithstanding a less urgent demand. Birch and elm are among the best sellers.

QUEBEC AND NEW BRUNSWICK.

Several shippers of spruce deals have been endeavoring to close contracts for next season's stock at prices corresponding to those which ruled this year, but it is understood that they have been unsuccessful and that manufacturers are asking an advance. Now that contracting for the Ottawa Valley pine production has commenced, it is expected to facilitate the closing of contracts for spruce stocks. Manufacturers are asking an advance on the ground of increased cost of production. In Nova Scotia the quantity of spruce deals manufactured next year will in all probability show a considerable dscrease owing to forest fires, which swept through lands that had been logged before. The small logs remaining on these lands will be cut, and very few of them will be large enough to produce deals for the British market. The mills in Nova Scotia have marketed practically all the lumber cut this year. Enquiries are being received for stock for shipment to New York, where spruce is selling at the highest average prices ever obtained.

MANITOBA AND BRITISH COLUMBIA.

The active building season in the North-West is about over, and the demand for lumber has fallen off considerably. There is still some call for finishing lumber, which is likely to be in more or less demand all winter. Prices are somewhat weaker on account of the sharp competition experienced from American manufacturers. There has been some buying for spring delivery at current prices. The British Columbia mills supplying the foreign trade are busy, but the stock of unsold lumber for local and eastern consumption is large and the demand quiet. This applies also to the shingle industry. Manufacturers have received some encouragement from the recent visit of two or three large United States buyers of shingles. It is said that they placed some orders with Vancouver mills, being induced to do so by the superior quality of the British Columbia product.

UNITED STATES.

The lumber trade of the United States is seasonably quiet. Wholesale orders are scarce, but there is a good movement of small lots, and in Buffalo a large demand for doors and house finish. Dealers are not stocking up to any extent, but their policy of conservatism is causing holders of lumber no anxiety, as they believe there will be no break in prices. Inventories of stocks on hand at wholesale centres show much less than at same time last year. At Buffalo it is stated that there is not box lumber enough in sight to keep the box factories running through the winter and early spring, and there is very little of this class of lumber held at the mills. It is quite probable that box lumber will advance before spring regardless of the general trend of prices. The manufacturers in Wisconsin and Minnesota are restricting their log input, so that they may be in a position to cope with any falling off in the demand for lumber next year. Spruce prices are very strong. Both frames and random are selling in Boston at from fifty cents to one dollar above the list for prompt delivery. The hardwood trade maintains a healthy tone. Birch, elm and basswood are receiving a large call and the advance in price has been well maintained. Some dealers have been compelled to refuse orders for elm on account of being unable to make delivery within the specified time. White pine and white cedar shingles are moving rather slowly, but there is more inquiry for red cedars.

GREAT BRITAIN.

We can learn of no important change in the British lumber market. Business is rather lifeless and little improvement is expected until the new year. The stocks at the leading importing centres are not excessive, but it must be remembered that the consumption this fall and winter has been smaller than last year and promises to continue so for a few months. The auction sales have been about the only guide to prices. These have developed no weakness; in fact, at the Manchester sale of the Lightbound, Rigby & Company stock high prices were realized. Third quality pine deals, 3x11 inch, brought £12 10s per standard; 3x9 inch £11 5s, and 3x7 inch £11. A small quantity of 4x7 inch spruce realized £8 5s. A good line of 3-inch birch sold at £5 17s 6d per standard, and some Quebec ash timber at 1s 1d per cubic foot.

TO HOLDERS OF BIRCH LIMITS.

Can you cut birch into Squares,&c. We can also take birch cut on the sweep with a jigger or small band saw. Large quantities required. Write in first instance to "Finance," c/o CANADA LUMBERMAN.

STOCKS AND PRICES.

F. F. Neale, of Chatham, N. B., has shipped over 60,000,000 feet of deals this season.

Seaman, Kent & Company, of Meaford, Ont., have just received a cargo of 250,000 feet of maple lumber from Bay City, Mich.

A three and a half mile timber berth on the North Forks Coal Branch, Kent County, New Brunswick, was sold by the Government last week to C. C. Stiles at $50 per mile.

The John Harrison & Sons Company, of Owen Sound, Ont., have just shipped a carload of numbered mile posts over the Canadian Pacific Railway for use on that line. There were 560 posts in the shipment.

The New Brunswick Government will offer for sale on December 9th a timber berth of two square miles on the Square Lake, Parish of Botsford, Westmorland County, for which James Friel has made application.

The Hanburg Manufacturing Company, of Brandon, Man., have 75 teams and 250 men at work on their limits in Duck Mountains getting out logs. The season in that district has opened earlier than last year and there are prospects of a large input.

The Carney Lumber Company, which recently closed a deal for the purchase of 200,000,000 feet of white pine on the Spanish River, will establish their headquarters at Massey, Ont. They will put in 10,000,000 feet of logs to be sawed under contract next year.

The Canadian Timber & Saw Mill Company, of Trout Lake City, B. C., has just let a contract for 100,000,000 feet of logs, involving an expenditure of half a million dollars, to E. L. Kinnon. English capital is backing the enterprise, and the contract is the largest let for some time. The company owns from four to six hundred million feet of timber along Trout Lake.

The Harbor Commissioners of Montreal invite tenders in this issue for a supply of timber and planks for 1904, including hemlock, white pine, red pine, elm, maple, and spruce. There are 194,000 feet of spruce planks and 175,000 ft. of pine planks called for. The piles required consist of 500 pieces white pine, 300 pieces red pine and 100 pieces elm, averaging 47 feet long.

R.F. Dorfman, who represents the lumber syndicate which has been buying up small parcels of timber in the vicinity of Nanaimo, B.C., states that the first boom of 600,000 feet of logs will be ready early this month. It is probable that another camp will be started early in the spring near Courtney, where the syndicate has about 110,000,000 feet of timber. Some of this goes 250,000 feet to the acre.

The Victoria Lumber & Manufacturing Company, of Chemainus. B.C., have purchased 4,000,000 feet of fir logs at Everett, Wash., which are being towed from Puget Sound to their mills. It is stated that the logs were purchased under contract that they should be delivered at the mills at approximately $4.10 per thousand feet. This is one of the largest purchases of logs made outside of British Columbia in several years. It is reported that the company were forced to buy on account of interruptions to their own logging operations by inclement weather.

Preparations are well advanced for logging operations on the St. Croix river, in New Brunswick. The cut will probably reach 30,000,000 feet, about the same as last year. James Murchie will cut about 7,000,000 feet, H. F. Eaton & Sons 10,000,000 feet, F. H. Todd & Sons 8,000,000 feet, and the Eastern Pulp Wood Company about 8,000,000 feet. Granville Chase will not operate this winter, having made arrangements with the Eastern Pulp Wood Company for a supply of logs. Mercier & Company have also arranged for some logs and will cut but little this winter.

THE OTTAWA VALLEY.

[Correspondence of the CANADA LUMBERMAN.]

To-day another big sale of 1904 deals was recorded. Watson & Todd, the well-known Liverpool firm, has closed with the Hull Lumber Company for the entire cut of red and white pine deals to be sawn under contract next year. While the actual figures are not obtainable, it is understood the price shows an advance of ten per cent. over last year's figures. The transaction covers between fifteen and twenty million feet.

November, always looked on as the season for such sales, has only seen two this year. For the past three weeks a deadlock has existed between the English buyers and the Ottawa district manufacturers of deals. The latter have been holding out for an advance of twenty per cent. on last season's rates, offering, of course, as ground for such advance the stiff price of labor and supplies. The English buyers, however, according to one of the number, could not pay the price asked and expect to realize on the investment. In turn they pointed out that British trade was dull and the market well stocked. The question of supply and demand, not cost of production, should, they claimed, govern the case.

It is now believed, however, that the deadlock has been broken, and that the other sellers and buyers will get together and agree on terms.

All the mills in the Ottawa district have practically closed. To the surprise of many it is stated that the season's cut as compared with that of former years shows a falling off of fully ten per cent. For instance, the big Booth mill is said to be between thirteen and fifteen million feet behind its cut for the corresponding period last year. As the supply of logs was a constant one and the weather steady, the blame for the shortage is laid on labor.

The Shepard & Morse Company, which took over and fitted up the Mason mill in the west end of the city, had a good season's business. It has been decided to install another double cutting band saw for next season's work. The one installed last year was the first of its kind seen in the Ottawa district. Next season the mill will be better equipped than ever with two such saws.

that the work of log cutting is well advanced. The present cold snap ought to freeze up the streams and thus facilitate the movement of supplies, which has been a difficult business for the past few days. Labor is easier to obtain, the close of work on the farms releasing many competent axe handlers.

No square timber will be manufactured in the Kippewa district this year, for the reason that there is little or none left to manufacture. The following firms that manufactured last season will leave square timber alone this year: Sheppard & Morse, Hull Lumber Company and Rideau Lumber Company. On the other hand Edward Moore, Klock Bros. and Robert Hurdman will continue in the square timber line.

Reports differ as to market conditions, but prices show no change. Dealers report local business and trade with the States slow, while the manufacturers state they have no trouble placing any standing stock they have on hand. With the close of navigation shipments are always slow from Ottawa, so that the present slackness is causing no uneasiness.

It is expected the log cut in the Ottawa river district will be nearer an average than will be that of the Georgian Bay district, where a shortage running all the way from twenty to thirty per cent. is predicted.

Ottawa manufacturers have not so much to fear from the threatening hard times in the States as have their fellows in the Georgian Bay district, for the reason that while the latter are almost wholly dependent on the American market, the Ottawa district mills cut largely for the English trade as well.

With the predicted shortage of logs in the Georgian Bay district, the chances of overstocking the American market will be greatly reduced and the prospects of a continuance of high prices brightened.

Ottawa, November 25th, 1903.

BRITISH COLUMBIA LUMBERMEN IN SESSION

A meeting of the Mountain Lumber Manufacturers' Association was held at the Board of Trade rooms at Nelson, B. C., on the 26th and 27th of October last. There was present a strong delegation from the British Columbia Lumber & Shingle Manufacturers' Association, and also from the Western Retail Lumbermen's Association. The meeting was a particularly interesting one, and the attendance was large, on account of the importance of the matters to be brought up for discussion.

A committee to prepare statistics as to the condition of the lumber trade and estimates as to the quantity of available lumber and the probable output and consumption next year, was appointed, and at a later session the committee reported that there were eighty million feet of lumber ready for shipment in the yards in British Columbia; that the demand was not strong, as the yards in the North-West Territories were pretty well stocked; that the probable output for next year would be seven hundred million feet or at least one hundred million feet above the estimated consumption, even taking into consideration the present very large increase in immigration in the North-West Territories.

The lumber manufacturing trade has certainly been booming; a large number of mills have been built and are under construction, and if there was a shortage last winter and spring, the reverse is now the case, and the members of the Lumber Associations were themselves surprised to find that they were face to face with a condition of things which will probably mean a shutting down of the mills for a time to prevent over-production.

During the period last winter in which there was an apparent shortage (we say "apparent" because it was largely attributable to insufficient transportation facilities at the time when the demand was greatest), American lumber was introduced to a very considerable extent into the North-West, the excuse being that Canadian lumber was not to be had, and this market having been once opened up to American mills, they are succeeding in holding the market, to the exclusion of Canadian lumber. A considerable advantage in freight rates over the Canadian mills helps them to do this.

This and many other subjects were dealt with by the members of both Associations in a joint meeting, and strong resolutions were prepared, both to the Canadian Pacific Railway Company pointing out the injustice that the members suffer in certain quarters on account of the comparatively heavy freight rates, and to the Dominion Government pointing out the necessity of a duty to protect this very important Canadian industry.

It was pointed out that on account of the somewhat demoralized condition of American trade at present, partly through over-production, the Canadian North-West was being used as a dumping ground for the surplus stock of common lumber of the American mills, and that such competition under the circumstances was not fair and should be prevented. The enormously increased capacity of the B. C. mills is a sufficient guarantee of a supply large enough to ensure that there will be no increase in price.

Steps were taken with a view to ascertaining if and in what way the uniform grading of lumber could satisfactorily be done. This is a matter which has hitherto been considered impracticable on account of the very great differences in the timber used by the different mills througout the country. It was decided, except in 2-inch dimension, to adopt Coast Standards of boards and matched lumber. This rule takes effect on January 1st, 1904.

A satisfactory arrangement was arrived at between the shingles members and the branch of the B. C. Lumber and Shingle Manufacturers at the coast.

The foregoing covers only a small part of the work done in the session, which lasted two full days. The meeting was productive of a great deal of good, and many questions of importance affecting the interests of the members, as between each other, were discussed and satisfactorily dealt with.

The Mountain Association, which is now two years in existence, was felt to be in a much healthier condition and the enthusiasm of the members very much greater than heretofore.

Regret was expressed that the commission which had been appointed by the Dominion Government to investigate the alleged combine had not had the opportunity of going into the question, as the members felt satisfied that a thorough investigation would have resulted in showing that these Associations were not in any sense responsible for the alleged unsatisfactory condition of things in the North-West.

LUCAS, STEELE & BRISTOL, - HAMILTON, ONT.

TRADE NOTES.

The Canadian Northern Railway are sending out an attractive booklet entitled "A Short Story of the Commercial Development of North-West Canada."

The Massey-Harris Company are installing a "Standard" kiln at their works in Toronto for drying lumber.

The Pere Marquette Railway has recently secured running rights over the Michigan Central from Buffalo to St. Thomas, Ont., subject to approval of the Canadian Government, and over western lines into Chicago.

Circular No. 3, just issued by the Sleeper Engine Company, of Montreal, describes their direct connected electrical generating units adapted for lighting purposes in small isolated plants or for independent factory service of any kind.

Gilmour & Company, Trenton, Ont., have been notified that the Wolverhampton Art and Industrial Exhibition, 1902, have awarded them a commemorative diploma for their exhibit of doors, etc., in the Canadian section.

The attention of our readers is called to the advertisement in this number of THE LUMBERMAN of the Dyment-Butterfield Manufacturing Company, of Barrie who manufacture an excellent line of saw mil machinery, prices and particulars of which they will be pleased to furnish to anyone making request for same, mentioning their advertisement in this paper.

Mr. W. D. Sheldon, who recently purchased the business of the McEachren Heating & Ventilating Company at Galt, Ont., has admitted Mr. S. R. Sheldon as partner, and the business will hereafter be carried on under the firm name of Sheldon & Sheldon. Although the firm is changed in name, the management and staff will remain the same excepting that Mr. McEachren has retired from the business. The new firm state that they are very busy at present and are experiencing a large demand for their goods. They make a specialty of drying, heating, and ventilating appliances, forge and cupola blowers, exhausters, etc.

Messrs. Clark & Demill, manufacturers of woodworking machinery, Galt, Ont., are for the fourth time increasing their works by an addition 80 x 60 feet to the machine shop. They make an up-to-date line of machinery, from entirely new designs and patterns. That their machines meet the demands of the public is demonstrated by the fact that they are unable to keep up with the requirements of patrons, but with their increased space they will be better able to handle their growing business. The newest addition to their list of wood-working machinery is a single and double cylinder lighting planer and matcher, which planes 13 inches wide by 7 inches thick and weighs about 6,000 pounds. As on all their goods, they use cut gears on this machine. The members of the firm give their personal supervision to the manufacturing department, thus insuring the best of work.

Among recent sales of the Hill steam drag saw, illustrated on another page of this paper, are the following: T. Harlan & Son, Trenton, Tenn., Chicago Mill & Lumber Co., Blytheville, Ark., Mengel Box Co., Louisville, Ky., Florida Land Co., Montbrook, Fla., Kaul Lumber Co., Birmingham, Ala., National Cooperage & Woodenware Co., Clarendon, Ark., Tomahawk Stave & Veneer Co., Tomahawk, Wis., Consumers Lumber & Veneer Co., Apopka, Fla., Georgia Iron Works, Augusta, Ga., Cape Fear Lumber Co., Wilmington, N. C., Allis-Chalmers Co., Milwaukee, Wis., A. Bruner & Son, Tiffin, Ohio, Blacksher-Miller Lumber Co., Brewton, Ala., Florala Saw Mill Co., Florala, Ala., Chickasaw Cooperage Co., Tudor, Miss., Simonds Mfg. Co., New Orleans, La., Jeremiah Arn, Arnheim, Mich., Mason County Logging Co., Little Rock, Wash., J. A. Bell Lumber Co., Lake Charles, La., Ricardo Honey, Tetepango, Mex., Indiana & Arkansas Lumber Co., Mariana, Ark., Henderson, Mitchell & Henderson, Huntsville, Ala., Halliday, Henshaw, Buckley Co., Seattle, Wash., Ocklawaha Lumber Co., Silver Springs, Fla., W. W. Carre & Co., New Orleans, La., J. C. Stout, Lake Charles, La., Colonial Mfg. Co., St. Johns, Newfoundland, Parkersburg Mill Co., Parkersburg, W. Va. These sales indicate the widespread popularity of these machines and are the best criterion by which to judge their merits. Full information regarding them can be had by addressing the manufacturers, Wm. E. Hill & Company, 415 North Rose street, Kalamazoo, Michigan.

Lumber Underwriters, 66 BROADWAY, NEW YORK

LUMBERING AND FORESTRY IN SWEDEN.

By Alexander MacLaurin.

I visited Sweden during the month of February, 1903; my idea in going over there was to see how they manufactured the lumber, how the mills were built, what kind of machinery was used and how they managed their forests.

The timber lands extend from the north of Sweden to within a few miles of Stockholm, the capital of the country.

There are only two kinds of timber there, viz., white wood, which resembles our white spruce in this province, and red wood, which is something like our red pine, but a little closer in the grain. There is an abundant supply of these two woods, but of small size; the average runs from 6 to 9 inches at the top end, 20 to 28 feet long for winter sawing. The large logs will average 8 to 11 inches diameter. These are sawed in summer; there is comparatively no 12 or 13 inches diameter timber.

Every farmer grows timber and markets a few trees every winter, just the same as a farmer here would market his oats and hay. Wood is a regular commodity of trade amongst the farmers; every farmer preserves a portion of his farm which is adapted only to the raising of timber for this purpose, and a Swedish farmer will never attempt to clear or cultivate land which is stoney, reserving it for forest culture. The hills are all covered with timber. I only saw one hill which was denuded of forest, and that was caused by a fire. Fires are of rare occurrence. I saw no land of any consequence which had been run over and destroyed by fire. I was informed that there had only been one fire during the past year in the whole of Sweden. It was an insignificant fire and was put out very quickly. Inasmuch as under the system of fire protection in Sweden, fire rangers may enforce the attendance of the militia, and all able bodied citizens may be compelled by the fire ranger to assist in the extinction of forest fires, the consequence is that a fire has no chance of extending very far under this system. There is a heavy fine upon any person refusing to assist at a forest fire. There was one thing which struck me very forcibly going up the country —that the railway ran through miles of forest, and I did not see a particle of land destroyed by fire along the tracks for a distance of 400 miles which I travelled on that railway, which runs up into the north of Sweden. I asked one of the largest lumbermen how they managed to keep the forest so close to the railway track from catching fire. The railway company is obliged to keep watchmen along the track during the dry season, in fact, they were living along the track this winter when I was there. Their houses were situated about a mile apart along the railway track. These men are railway employees, and their duty is to take all precautions against fire. The railways in Sweden are owned by the government, and in consequence these men are also government employees.

I travelled through the woods across country in a sleigh, through wood roads nearly all the way for about 30 miles, for the purpose of seeing the condition in which the forests were. I took particular notice of the forest floor in various parts, and where, on the private lots owned by the farmers, they cut their own firewood. The forest floor was cleaned up completely and no debris left. I saw a few tree tops in the bush, where they were manufacturing small square timber, chiefly four inches square, for the German market. I asked them what they were doing with such stuff as that. They told me it was for the German market. Everywhere I went the forest floor was clean, there was no underbrush such as we have in our country. It is about the closest cutting that I have ever seen; nowhere in Canada have I seen any such close cutting. The tops of some of the trees, which were too rough, were cut off and piled in with the slabs and edgings for charcoal. Every available piece of wood, which is not otherwise merchantable, is worked up into charcoal, so that the whole tree is utilized into merchantable stuff.

The government forest lands are for the most part situated at the headwaters of the rivers.

The forests are divided into sections. The sections are simply blazed out. When the government decides to sell any of the timber or trees of a certain size, that is to say, merchantable trees, they are marked by the government ranger. The sale of the sections is made by auction, the lumbermen purchase the trees only that are marked. The government in offering the trees at auction gives an approximate estimate of the quantity of timber on each section, they give you the exact number of trees and an approximate average of the size, and what they will produce when cut down—this for the information of the purchaser. The government, however, is not bound by this estimate, only so far as the number of trees is concerned—the approximate estimate is given as a guide to the purchasers. The purchasers, of course, examine the sections which are to be sold, the government giving ample notice of the sales of these sections, and the purchasers examine for themselves the limits; in many cases where the purchaser has confidence in the skill of the explorer, they place explicit reliance upon the government report. They seem to rely on the honesty of each other. I never saw a people who placed such confidence in one another as do the Swedish people. This convinces me that their dealings are distinguished by great honesty.

There is no effort to cheat the government, and there is nothing done on the part of the government to lessen the confidence of the purchasers in the honesty and fidelity of the system. The fact is, the government, the farmers, and the lumbermen work hand in hand, inasmuch as the timber revenue forms a very important item in the budget of the country. The government seems to realize that it is their duty to facilitate in every way the production of the article and its sale in such a way that the lumbermen can make a profit out of the business and all parties are satisfied.

I visited one of the largest lumbering concerns in Sweden. They were engaged in the manufacture of lumber since the year 1643; they have conducted the lumbering business through their ancestors in the same place, on the same river, since the year 1643. I saw the original deed granting a limit of 500 miles to the firm who established the business in 1643; of course the establishment has changed hands a number of times since the original grant, but the limits are operated still, and are valuable at the present day. The reason for this state of things is easily explained by the fact that the proper system of forest preservation has existed from the first, on these limits, and that this system is still in force at the present day.

The cut of the establishment is about eighty millions a year. I saw many thousands of logs within 10 miles of the mill, put out on the ice of the river this winter. The average was from 4 to 9 inches.

I investigated the question of the expense of getting timber out of the woods, and found that the cost of this department of lumbering differed very slightly from our own. The cost of manufacturing at the mills is much lower than ours. This is due, largely, first to cheaper labor, and secondly, the rate of insurance on mill properties and lumber yards. These two items reduced the cost of manufacture about one-half what it costs here.

From what I have seen in regard to Sweden, I think that the system there will result in a permanent supply of timber, and I am also of opinion that the same result can be produced in the Province of Quebec if the government would take hold of the question seriously and intelligently. To do this the farmers and colons must be taken into the confidence of the government and educated, and no better method can be devised than to enlist the good offices of the country curates in the instruction of their parishoners in the principle which governs the perpetual production of forest products. Unfortunately, in some instances, the curate who has great influence in a parish becomes unconsciously an instrument in the hands of speculating jobbers. The government revenue suffers accordingly.

The large establishment of which I have spoken is situated on the River Angermann, in Sweden. This river is similar to the Gatineau, and about as long. There are twenty-five lumbering establishments on this river, whereas on the Gatineau to-day there remains only two establishments. As a matter of fact the Gatineau river and Valley is far superior as a timber producer to the Swedish river both in size and possible quantities and variety of timber. Where the Swedish country only produces two varieties the Gatineau country furnishes white and red pine, spruce, cedar, birch, not to speak of the hardwoods, which are of considerable value. If the Gatineau Valley had been treated in the same way as the country tributary to the Angermann it would supply fully as great a number of milling establishments as the Swedish river.

At the headwaters of the Angermann the timber becomes very small, which is not the case with the Gatineau river. I am familiar with the country tributary to the Gatineau river, and have seen thousands of pines in the burnt district destroyed. In fact, in the Ottawa country there is more brule than standing forest. In Sweden they do not re-plant, they trust to natural reproduction, that is to say, the seeding from the standing trees. There

are always trees left sufficient to produce fresh seed and to re-seed the forest naturally.

The system of cutting in sections serves the purpose of reproduction by lapse of time. It is a well-known fact that for every tree of 12 inches diameter cut in the forest there has got to be a sapling growing to fill its place ; it becomes a question then of preserving the sections sufficiently long so that that sapling will become a 12 inch tree before the forest section is again lumbered over.

There is a record kept by the government of every section cut, and the date of cut. Time is given for the reproduction of the forest. It is under this system alone that the perpetual supply of forest products can be obtained and perpetuated. There is no middle course. No system of preservation will be perfect unless some such regulation is adopted and effectively enforced.

Timber does not grow as fast in Sweden as it does with us. It is estimated in Sweden that between 15 to 20 years are required to get a re-cut of 11 or 12 inches on the stump. From observation and experience I am of the opinion that from the sapling to the 12 inch spruce tree it will be about 30 years. The average growth pine from the sapling in propitious ground would be about two feet high for each year. A 12 inch pine would be at least 40 feet high.

I noticed in the northern part of Sweden farm after farm consisting of only four acres, or thereabout, of good land under cultivation. The balance of the farm was entirely in forest trees. These farmers supplement their agricultural products by the profits which they make out of forest culture, in fact, one might say that the greater part of a Swedish farm in this section of the country is a wood or timber farm, and the natives pay as much attention to the culture of the forest as our people do to their farms. If this practice had been followed by the colons in the Province of Quebec, where similar circumstances exist, they would have a large forest on the farm, instead of a desolate, burnt-up and valueless piece of ground with hills completely denuded of soil.

This forest farm would be a constant source of revenue to the farmer, and we would retain our population. The abandoned farm, as we know it now, would be a thing of the past and a source of wealth to the province. Now it is an eyesore and a reflection on the system which produces it.

As a consequence of this forest culture, in all my travels in Sweden I never saw a house which was uninhabited, however isolated it may have been in the forest. I found the houses inhabited by seemingly comfortable families.—Rod and Gun.

THE HILL DIRECT ACTING DRAG SAW.

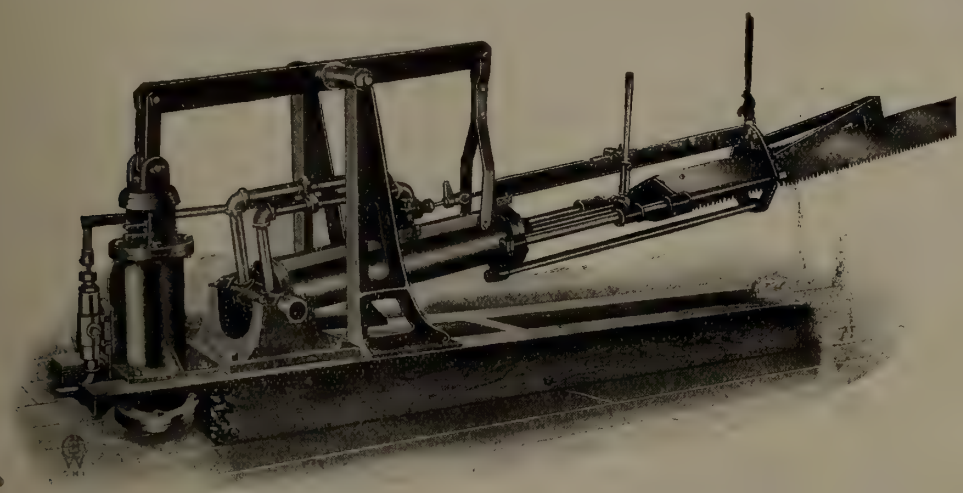
The places where a drag saw can be used to advantage are so numerous and its advantages over any other kind of cross cutting are so great that any improvement in this class of machinery is sure to interest every reader of this paper. This being the case, we take pleasure in illustrating the latest model of the famous Hill patent direct steam drag saw, with auxiliary steam hoisting cylinder.

The construction of this machine, here illustrated, is radically different from that of any other drag saw, and is by far the most simple and compact. The machine occupies very little space, and is really a self-contained steam engine with the saw fastened to the piston rod. It has few parts, consisting mainly of base, cylinder, valve and connections, cross-head which is attached directly to piston and to which saw is secured suitable guides for crossheads, saw guide and a steam cylinder for raising and lowering saw and feeding it while it is in the cut. The cylinder is provided with a positive steam cushion at each end of stroke so that even at maximum speed it is impossible to knock out cylinder heads. This perfect cushion also serves to obviate the jarring of foundation and end play so common in many other types of drag saws. The machine can be placed in the upper storey of a mill or factory without inconvenience. The valve is radically different from anything used heretofore, and is so simple in construction that it cannot get out of order. It is operated from crosshead and allows a very high piston speed. The main part of the machine hinges on trunions which work in a heavy base.

The mechanism for counterbalancing the machine and regulating the feed of the saw is very simple. The machine is partially balanced by a weight which is fastened to a rope passing over the sheaves and attaching to yoke of drag saw. By taking out or adding to the weight in the box the feed can be increased or decreased. In addition to this the operator is given control of the feed and provided with a simple hoisting device in the auxiliary steam cylinder. This cylinder gives a rapid, powerful and positive hoist, which without doubt is superior to any other. The machines are built in three sizes and are also arranged to be used on a raft for sawing logs in the water.

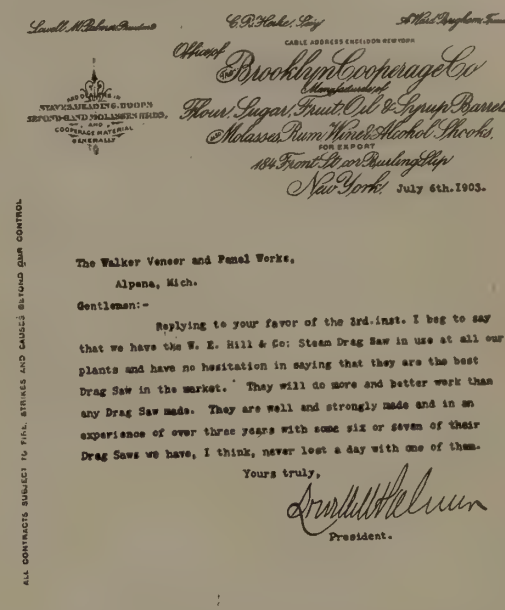
These drag saws are extensively used all over the United States, in Europe, Africa, Mexico, South America and the Phillipines, which gives some idea of their wide popularity.

They are used to cut shingle bolts, stave bolts, heading stock; to cut up logs in the pond to length on the log deck; to cut cord wood, pulp wood blocks, and for a thousand other purposes ; in fact one of these machines was shipped to Newfoundland to cut up whales—others having been made to cut ice and stone. They can be mounted on skids and taken from place t place to be used with portable boiler to cut up logs in the woods.



DIRECT ACTING DRAG SAW, MANUFACTURED BY WM. E. HILL & CO., KALAMAZOO, MICH.

They are claimed to be the fastest cutting machine on the market, and the most economical to run. As to the wearing qualities, the following letter from Lowell M. Palmer, President of the Brooklyn Cooperage Company, is sufficient testimony as to that :



Lowell M. Palmer, President. C. D. Hale, Secy. A. Hall, Treasurer.

Office of Brooklyn Cooperage Co

Manufacturers of

Flour, Sugar, Fruit, Oil & Syrup Barrels, Molasses, Rum, Wine & Alcohol Casks.

FOR EXPORT

184 Front St. cor. Dunlop Slip

New York, July 6th. 1903.

The Walker Veneer and Panel Works,

Alpena, Mich.

Gentlemen:-

Replying to your favor of the 3rd. inst. I beg to say that we have the W. E. Hill & Co. Steam Drag Saw in use at all our plants and have no hesitation in saying that they are the best Drag Saw in the market. They will do more and better work than any Drag Saw made. They are well and strongly made and in an experience of over three years with some six or seven of their Drag Saws we have, I think, never lost a day with one of them.

Yours truly,

Lowell M. Palmer

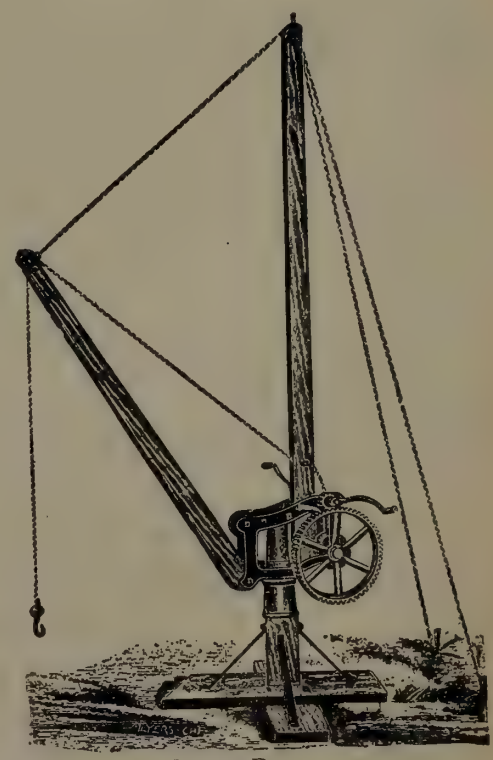
President.

ALL CONTRACTS SUBJECT TO FIRE, STRIKES AND CAUSES BEYOND OUR CONTROL.

Parties who contemplate purchasing a drag saw will do well to write Wm. E. Hill & Co., 415 North Rose street, Kalamazoo, Michigan, for their catalog B and prices before placing their order.

A TIMBER DERRICK.

The National Hoist & Machine Company, of Chicago, Ill., manufacture a special derrick for handling timbers, in yards and at mills. Two men can operate them and easily handle heavy timbers, on and off cars, or piles built on flat cars with flat wheels for yard use, or with flanged wheels for tracks. These are the only practical hand power derricks made for this purpose. The special features of this derrick are in setting up and taking down, to allow it to pass through doors and under wires, etc. Two men can take it apart and reset it quickly and easily.



TIMBER DERRICK.

The manufacturers will be pleased to send further particulars, prices, etc., to any reader of the LUMBERMAN who may write them mentioning their advertisement now appearing in this journal.

THE HOUSE OF HOO-HOO.

A special meeting of the Supreme Nine was held at Chicago on Saturday, November 7, one of the most important things discussed being the House of Hoo-Hoo at the St. Louis World's Fair. It was reported that about $30,000 in subscriptions had been received. While this amount is sufficient to build a house, it is not sufficient to build the sort of house desired, nor to finish and maintain it during the seven months of the Exposition.

The Board of Governors of the House of Hoo-Hoo held a meeting at St. Louis early last month and suggested the appointment of December 9 next as a sort of universal House of Hoo-Hoo Day, on which day every member of Hoo-Hoo will consider the question: "Am I going to contribute to this undertaking or not? If so, I am going to do it to-day." This suggestion was discussed by the Supreme Nine at Chicago, and the following resolution was unanimously adopted:

"Resolved, that the Supreme Nine in special called session assembled, heartily endorses the action of the Board of Governors of the House of Hoo in naming December 9th as a special day on which to make a thorough and concerted canvass of the membership for subscription to that great undertaking, and promise cordial support."

Every Canadian Hoo-Hoo should make it a point to contribute on December 9 to the building of what will be a world renowned structure at St. Louis. If you have already contributed, consider whether you cannot increase your subscription.

INSURANCE FOR THE LUMBER TRADE.

SOME PROPHECY AS TO FUTURE OF INSURANCE COMPANIES—STRENGTH OF THE STANDARD LUMBER MUTUALS—FINANCIAL SHOWING OF THE LUMBER MUTUAL OF BOSTON.

Following the boom period comes the inevitable reaction; inflation is followed by depression. Bonds decrease in value, many good stocks fall 20 per cent. to 30 per cent. in the market, and of those which have been well watered, having the water squeezed out, nothing remains.

"Investment securities" in many instances become permanent investments in a double sense.

Insurance companies having large capital and surplus to invest naturally buy such bonds and stocks as they think easily convertible into cash on the market.

In flush times they buy freely and, assuming a profitable underwriting business done and their investments profitable, declare and pay large dividends.

As many of the officially recognized companies (nearly one-quarter of the whole number) lost money on their underwriting the past ten years and have only the income on their investment to offset their losses, the cutting off or reduction of this income and the fall in value of their securities will leave many of them without a surplus this coming December 31, when their reports are made to the insurance departments of the several states in which they are located.

Come to mark down their securities to the present market value, so much less than one year before, added to their previous loss record on underwriting, they will find their capital impaired 10 to 25 per cent.

The laws of the several states require the impairment of capital to be made up by an assessment on the stockholders. The stockholders, rather than put in more money to support a losing business, will reinsure their risks, close up their companies and retire from business.

The chance to advance the "market value" of their securities two years ago was an extended lease of life for many companies after the excessive losses of the previous two or three years. Marking the securities down at the close of this year will close their careers, unless an excessive underwriting profit has been made by the 25 per cent. advance in rates in 1902 and the advance has been strictly adhered to on all risks.

The Argus Insurance Chart gave the names of twelve stock companies and nine mutual companies failed or retired from business in 1902, including only those companies doing an honorable and above board business and excluding all "undergrounders" or "wild cat" companies whose names change at least as often as their signs need repainting.

The failures for 1903 will certainly equal those of 1902. In 1904, when the stockholders begin to study over the January 1, 1904, reports, they will make short work of voting their companies out of business, and the failures be doubled.

With a decreasing number of companies seeking insurance the lumber trade will naturally turn its business and orders more to those companies organized and managed exclusively by the members of the trade.

The trade mutuals, organized in 1895, with eight years' experience back of them as a guide for present and future business, and having demonstrated their ability gradually to increase their dividends up to 20 per cent. and 30 per cent, while at the same time accumulating a net cash surplus equal to the total of all dividends paid for eight years, claim they should have the preference on all orders for insurance.

The Lumber Mutual of Boston, in support of that claim, publishes the following:—

FINANCIAL STATEMENT.

THE LUMBER MUTUAL FIRE INSURANCE COMPANY, 53 STATE STREET, BOSTON, MASS.

50 per cent. reserve. October 31, 1903.

ASSETS.

Mortgages, 6 per cent.	$ 1,800.00
Notes, 5 per cent.	10,000.00
Municipal bonds, 4 per cent.	10,000.00
U.S. government bonds (coupon), 3 per cent	2,160.00
U.S. government bonds (old coupon), 4 per cent.	555.00
Cash in banks on interest, 26 per cent.	96,292.74
Cash in office	52.74
Premiums due, not more than three months	9,728.60
	$130,589.08

LIABILITIES.

Unearned premiums	$ 55,609.07
Inspections	88.81
Loss resisted	1,000.00
Loss reported (estimated)	600.00
Net cash surplus	73,291.20
	$130,589.08
Contingent assets	333,654.42
Total assets	$464,243.50

	Amount	Premium
Insurance in force	$4,155,264.20	$111,218.14

Dividends paid on 1902 policies (since Jan. 1, 1903)	$ 22,334.56
Paid for losses and adjusting (since Jan. 1, 1903)	37,239.28
Total dividends paid to date	73,591.59
Total losses paid to date	163,147.05

Dividends on policies issued in 1902, 30 per cent.

This statement includes in its assets:

1st. Mortgage, 6 per cent., $1,900, on property worth $4,000.

2nd. Notes, 5 per cent., $10,000, being two of $5,000 each, given by Massachusetts corporations, each rated over $500,000.

3rd. Municipal bonds, 4 per cent., $10,000 are water bonds of a Massachusetts city.

4th. Government bonds, need no comment.

5th. Cash in banks on interest, 2 per cent. to 5 per cent. $96,262.74. The best comment on that is to publish in full the company's

Lumber Mutual cash book balance		$96,345.48

Massachusetts savings banks and trust companies being under the control and yearly examination of a state commission, the members of which must not be interested in any business or securities, and the banks compelled to set aside a guaranty fund of a certain percentage of the profits before each distribution of profits to the depositors, the deposits are absolutely safe.

The five special deposits of $5,000 each in national banks, on call, are intended as an emergency fund to cover the largest possible loss of the Lumber Mutual in any lumber district. The fund has never been called on up to this date.

The officers and directors of the Lumber Mutual Fire Insurance Company congratulate the policy holders that not one dollar of the company's funds is placed where there is any apparent possibility of the smallest loss or shrinking of value.

The question of the ability of the company to continue its present 30 per cent. dividends may be answered by referring to the above financial statement.

Profits divided, cash dividends paid	$73,591.59
Profits undivided, net cash surplus	73,291.20

The profits undivided equaling the dividends paid for past nine years, any lumberman can make a safe bet that the "plan of business" that has been steadily followed since the company first started will continue the present 30 per cent. dividend. To prove a winner, all that is necessary to do is to forward his next expiring policy for transfer to the Lumber Mutual Fire Insurance Company, of Boston, Mass.

W. C. JOHNSON, President.

The Rat Portage Lumber Company, who recently purchased the property of the Harrison River Mills, Timber & Trading Company at Harrison River, B. C., have commenced the erection of a saw mill which will be much larger than the one destroyed by fire.

THE NEWS

—Crain Bros., of Bath, N. B., are building a new saw mill at Kilfoil.

—Alex. Dickson has sold his lumber yard at Atwood, Ont., to John Fisher.

—The Canadian Elevator Company are building a planing mill at Morris, Man.

—J. B. Coates has commenced the erection of a stave and hoop mill at Dutton, Ont.

—Balsden & Blowett have purchased the planing mills of R. Cole at St. Thomas, Ont.

—A. McKellar has disposed of his lumber business at Pettapiece, Man., to William Shanks.

—Mr. Button has leased the saw mills at Terranova, Ont., owned by J. Thompson and S. Ireland.

—N. T. Peuch, who has operated the planing mill at Ponoka, N. W.T ., is removing to Wetaskiwin.

—The dissolution is announced of Beaumout & Gauvin, lumber merchants, Ancienne Lorrette, Que.

—The Boissevain Lumber Company has opened at Boissevain, Man., with G. H. Carman as manager.

—Vigars & Company, of Port Arthur, Ont., have asked the council for a lease of certain land for a mill site.

—W. C. Duffus, of Detroit, is considering the establishment of a turned wooden goods factory at Woodstock, Ont.

—Nelson Mowers has sold his interest in the Olds Lumber & Hardware Company, of Olds, N. W. T., to W. L. Fisher.

—Jos. M. Champigny has registered as proprietor of the Enterprise Wood Manufacturing Company, Lawrenceville, Que.

—A new lumber company has been formed at Mayook Siding, B. C. James Ryan is president and C. D. McNab general manager.

—The Cranbrook Sash & Door Company, Limited, has been incorporated at Cranbrook, B. C., with a capital of $40,000.

—A. S. Rosenroll & Company, lumber dealers, Wetaskiwin, N. W. T., are to be succeeded by the Rosenroll Lumber Company, Limited.

—McKellar & Jackson, who have carried on business as lumber merchants at Rapid City, Man., have dissolved, C. E. Jackson continuing.

—A new saw mill is to be built at New Westminster, B. C., by Small & Buckler, who have secured timber limits tributary to the Fraser river.

—Murray & Gregory are installing the machinery in their new saw mill at St. John, N. B., which will be ready for operations early next season.

—The name of the Laurie Lumber Company, Limited, a British Columbia concern, has been changed to the St. Mary's River Lumber Company, Limited.

—J. A. Sayward & Company have completed their new planing mill and sash and door factory at Victoria, B.C., which is 50 x 100 feet, two storeys high.

—McClellan Bros., of Hopewell Hill, N. B., have sold their portable steam saw mill to Herbert Wilbur and William Smith and purpose buying a larger one.

—The Baie Chaleur Lumber Company have completed a new saw mill at Mission Point, Que. They will manufacture all kinds of lumber, including pulp wood.

—The new saw mill of J. P. Newman, of Wiarton, Ont., has a daily capaicty of 20,000 feet of lumber and 20,000 shingles. It is equipped with modern machinery.

—The British Columbia Box Factory, of Vancouver, B. C., have placed in their mill a double cutting band mill, the first of the kind to be installed in British Columbia.

—The Croft Lumber Company has recently been formed at Huntsville, Ont., the dirdctors being George Paget, A. E. Paget, Charles E. Paget and James Rae. The capital is $40 000.

—Mathias Joanisse, A. Roy and others have purchased the Como Estate at Maniwaki, Que., on which there is a large saw mill. It is the intention to operate the mill to its full capacity.

—Letters of incorporation have been granted to the Scott Lumber Company, of Fredericton, N. B., with a capital stock of $98,000. New machinery is being installed in the Victoria mill at that place.

—The St. Catharines Box & Lumber Company has been organized at St. Catharines, Ont., with a capital of $75,000. The provisional directors are M. J. Murphy, W. S. Duffin, H. H. Wilson, and Martha Wilson.

—Wilson & Company, the American firm which has bought up large quantities of timber in the vicinity of Nanaimo, B. C., have begun active operations at French Creek. Donkey engines are being employed in their woods operations.

—The Cutler & Savidge Lumber Company, of Spring Lake, Mich., write us that they have disposed of all their Canadian holdings and are winding up the affairs of the company, after a continuous existence of nearly fifty years in the timber business.

—Frank D. Wilsley, of New York, and C. E. Taschereau, L. A. Taschereau and Ferdinand Roy, of Quebec, have been incorporated under the title of the Mill Stream Lumber Company, with a capital of $200,000. It is proposed to construct and operate pulp and saw mills.

—A party of surveyors have been sent out by the Quebec & Lake St. John Railway to locate a line of railway recently subsidized to run from River Jeannette, on the line of the Lake St. John Railway, to La Teque, the head of steamboat navigation on the St. Maurice river. This line will open up a large lumbering district.

—The Farrell mill situated on False Creek, at Vancouver, B. C., has been purchased by J. Sinclair, of Wapella, N. W. T. Mr. Sinclair has a number of yards throughout the North West Territories, and has been a large buyer of British Columbia shingles. It is his intention to increase the mill to more than double its present capacity.

—The business of Keenan Bros., lumber manufacturers and dealers, Owen Sound, Ont., will hereafter be controlled by a joint stock company, to be known as the Keenan Bros. Company, Limited. The capital stock is placed at $50,000 and the provisional directors are J. E. Keenan, J. C. Keenan and R. T. Keenan, all of whom have heretofore been identified with the business.

—Ayton Cromwell, F. R. Cromwell, James Cromwell, Hugh Riddell and Joseph Riddell, of Cookshire, Que., have acquired 3,200 acres of timber land, which comprises the Dudswell mountains, from the British American Land Company. They have formed the Dudswell Lumber Company and are building a steam saw mill on the Kingsley Brook.

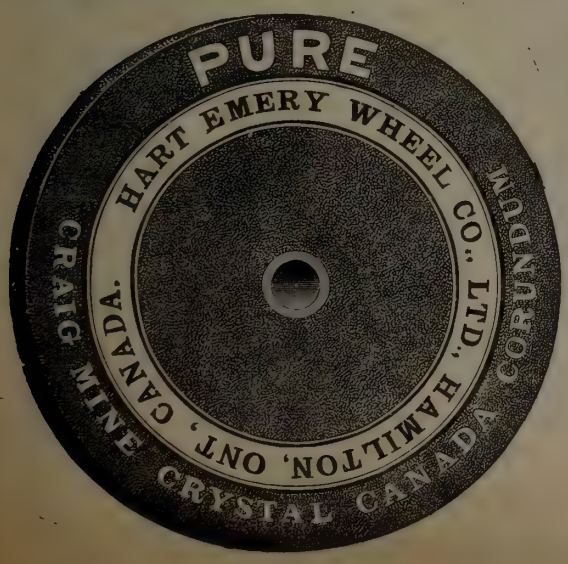
—Breckenridge & Lund have recently completed a large saw mill and planing mill at Wardner, B.C., said to have cost about $200,000. The saw mill has a capacity of 75,000 feet of lumber per day and is so constructed that its capacity may be doubled by the building of an addition. It is extended to market the output in Manitoba and the Territories.

—The Van Buren Lumber Company, Limited, of Edmundston, N. B., is applying for incorporation, to conduct a general lumbering business, with power to acquire the rights and franchises of the Van Buren Lumber Company, a corporation existing under the laws of the State of Maine. The applicants are T. J. Cochran, J. M. Stevens and Erin Lawson, of Edmundston, and Allan Hammond and J. W. Hammond, of Van Buren, Me.

—The twenty miles of rails and rolling stock used by McLean Bros. in their dyking operations on the Fraser river, in British Columbia, have been transferred to the scene of Robert McNair's logging operations on the Capilano river, opposite Vancouver. The rails will be laid up the mountain side to the cedar limits and the cars will be used in hauling the logs down to deep water in Vancouver harbor. The old engine purchased has a history. It hauled Brigham Young in the early days of its career on a train which ran into Salt Lake City. It was subsequently bought by the Columbia and Western Railway of British Columbia—their first engine—and when sold to McLean Bros. was known as "Old No. 1." It is in a good state of repair and will probably end its days hauling logs up and down the mountain side.

—The Board of Trade at New Westminster, B. C., have petitioned the Dominion Government to proceed at an early date with the improvement of the Fraser river channel. The memorial states: "It may be pointed out that your Government has here a large revenue interest at stake. There are 170,000 acres of timber berths now under license immediately tributary to the Fraser River, which will on an authoritative estimate produce not less that, 5,100,000,000 feet of logs, paying a sum of $255,000 stumpage into the Dominion Treasury. The total available quantity of timber and amount of revenue locked up in this section reaches probably 50 per cent. more than these figures, and it is desirable that this wealth should be realized, as it is constantly liable to destruction by fire. It will be seen, therefore, that this one industry will pay many times over the cost of opening up and maintaining the river channels. Additional to this are the needs of general commerce, which cannot be belittled or overlooked."

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says:

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by Canadians for Canadians.

HART CORUNDUM WHEEL COMPANY, Limited, Hamilton, Ont., Can.

WOOD PULP DEPARTMENT

PROTEST AGAINST A COUNTERVAILING DUTY.

A hearing on the protests of a number of Canadian pulp companies against a countervailing duty on pulp imported into the United States was held before the Board of General Appraisers in New York city on November 11th. The additional duty objected to was imposed by the Treasury Department early last year. The ruling provides for the collection of 25 cents per ton on all pulp brought into the United States made from wood cut on Crown lands in those provinces of Canada which allow a rebate of 25 cents per cord on the Crown land wood when it is ground into pulp in Canada. The countervailing duty is, therefore, restricted to the province of Quebec, which is the only province which gives a rebate of 25 cents a cord for home manufacture.

The protests taken up at the last hearing were those of the Riordon Paper Mills, Limited, of Merritton and Hawkesbury, Ontario; Laurentide Pulp Company, of Grand Mere, Quebec; Belgo-Canadian Pulp and Paper Company, of Shawinigan Falls, Quebec; James MacLaren Company, Limited, of Buckingham, Que.; the Brompton Pulp and Paper Company, of Brompton Falls, Quebec, and the Jacques Cartier Pulp and Paper Company, of Pont Rouge, Quebec.

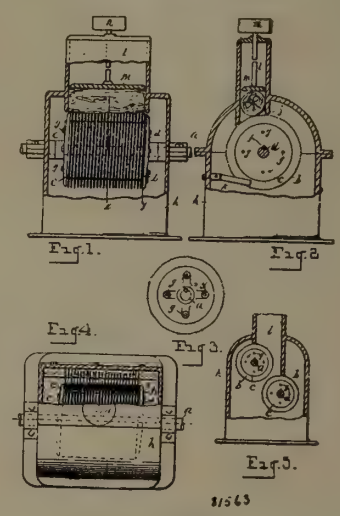
The object of the hearing was to ascertain the percentages of wood cut on Crown lands and on private lands used by the protesting companies. Affidavits covering this point were filed by all the companies, and the figures given in these affidavits were the subject of the inquiry made by the government.

It appeared that of the wood used by the Laurentide Pulp Company, of Grand Mere, during the year ending June 30, 1903, 82.6 per cent. came from Crown lands and 17.4 per cent. from private lands. The Belgo Pulp & Paper Company, of Shawinigan Falls, used in the year ending June 30, 1903, 30,888 cords of Crown land timber and 7,021 cords of timber cut from private lands, and about one-half of the product of the mill was shipped to the United States. In the year ended June 30, 1902, the MacLaren Company, of Buckingham, used 3,967 cords of Crown timber and 14,105 cords cut on private lands, while during the past year the supply from Crown lands was increased to 9,805 cords and that from private lands decreased to 11,834 cords. The Riordon Paper Mills, Limited, used in the Hawkesbury mill in the year ended June 30 last 517,652 pieces of wood cut on Crown land and 50,976 pieces which came from private lands. The Hawkesbury mill produces about 80 tons of pulp per day, of which 80 per cent. is shipped to the United States. It was shown that the Jacques Cartier Pulp Company, of Pont Rouge, Que., and the Brompton Pulp & Paper Company, of Brompton Falls, Que., had not used any wood cut on Crown lands, but the latter company had bought 500 cords of Crown land wood that had not yet been manufactured into pulp.

It was decided to postpone further proceedings until December 4. The decision of the Board of Appraisers, however, will not be final, as in any event the case will be appealed.

PATENT FOR PULP MACHINE.

A Canadian patent has been granted to Elias Hazleton, of Lansing, Mich., for a pulp machine, designed as shown in the accompanying drawing. The claim made is for a machine for the reduction of wood to pulp or powder, a



PULP MACHINE.

rotatable cylinder constructed of discs of different diameters, set alternately at an angle to a plane at a right angle to the shaft, leaving a space between the larger discs, and a cleaning device constructed of flexible strips extending into the spaces between said larger discs; two rotatable cylinders, toothed on their peripheries, the one located above the other, and a feeding chamber or chute above said cylinder leading into the interior of the case and having its pressure side in a plane central to the shaft of the lower cylinder; the combination of a rotatable shaft, toothed discs located upon said shaft at an angle to a plane at right angles to the shaft, heads mounted upon said shaft outside said discs having their inner faces extended at an angle to a plane at right angles to the shaft, spacing discs intermediate the toothed discs and heads, said toothed and spacing discs keyed to the shaft, and rods extending through said discs and heads lengthwise of the shaft, a housing, and feed chute leading into the interior of the housing.

The Cornwall Paper & Manufacturing Company, of Cornwall, Ont., will proceed next spring with the erection of their mill, which will be located at Sheik's Island, about four miles from Cornwall. Mr. M. P. Davis, of Cornwall and Ottawa, is one of the directors.

BALSAM TIMBER FOR PULP MAKING.

The importance of finding a satisfactory substitute for spruce for the manufacture of paper pulp led to a commercial study of the balsam fir, which Mr. Raphael G. Zon, of the U. S. Bureau of Forestry, has just concluded.

The rapid disappearance of spruce, the best tree in the north woods for the manufacture of pulp, has forced pulp makers to use more and more balsam, and has brought that tree, once despised and neglected, into a very important place. Four years ago practically no balsam was used by pulp manufacturers, many of whom are now using from 25 to 50 per cent. of it. The amount of balsam used depends entirely on the spruce supply near where the different mills are located. The smaller the amount of spruce available the greater is the amount of balsam used.

Pulp manufacturers find balsam the best substitute for spruce which can be found in the north woods. Other trees there are which might serve well for paper pulp, but they are not native to the country where the mills are located. Pulp mills are enormously heavy and expensive, and the wood must be brought to them—they cannot be taken to the wood. The pnlp man, therefore, in his choice of a substitute for his diminishing supply of spruce, is confined to the very few species that grow in association with spruce, and of these species balsam is at once the most abundant and the most promising.

The present method of making pulp out of balsam is to grind it or treat it with chemicals along with spruce. The results are not satisfactory. Balsam mixed with spruce produces an inferior grade of pulp. Mr. Zon suggests that it would be much better if balsam were handled independently of spruce. The balsam fibres are not nearly so tough and strong as those of spruce, and the pressure of the grinders, which are adjusted for spruce fibres, is too powerful for the fibres of balsam and they are torn and weakened. For the same reason the chemicals used in the treatment of spruce fibres weaken and dissolve the fibres of balsam when used in the same strength. Examples of what can be done with balsam in the manufacture of paper are found in France, where the tree is made to produce good book papers.

The silvicultural features of the balsam are related by Mr. Zon, who has studied the tree carefully throughout its range, but particularly in Maine and the Adirondacks. Spruce has been cut for many years, while balsam has scarcely been cut at all; hence balsam has taken the place of and is crowding out the spruce. This change in species in the north woods is hastened by the great superiority of balsam as a seed tree, for balsam bears seeds every year, while the spruce seeds only once in seven years. These conditions make it apparent how very desirable it is that pulp manufacturers should use balsam wherever possible, for in doing so they not only lessen the drain on the limited amount of spruce left, but they give the tree a chance to grow and reproduce itself. This point Mr. Zon brings out forcefully. The results of Mr. Zon's work will appear this winter in the form of a bulletin published by the Bureau.

PULP MILL LITIGATION ENDED.

After having been in litigation for over two years, the case of the Maritime Sulphite Pulp Company with the Royal Trust Company, Hugh Robertson, and the Bank of Montreal, was finally settled at St. John, N. B., on October 27th. A settlement was made by which the liquidators, in consideration of $15,000 in cash, handed over all their interest in the real and personal property of the pulp mill and consented to a decree of foreclosure and sale of the mortgaged premises. In addition to $15,000, the Bank of Montreal agreed with Messrs. Stewart, Lee and Bruce, who had large claims against the company, not to rank against the estate as creditors.

Judge McLeod, judge in the liquidation proceedings, on the application of the liquidators, agreed to this settlement and later the solicitors and counsel of each party appeared before Judge Barker, judge in equity, and had a decree of foreclosure consented to. Under the settlement each party pays its own costs.

It will be remembered that lumbermen doing business in Northumberland counry, who had furnished lumber and pulp wood to the mill up to the time of the suspension, filed a protest against an assignment of the Crown timber licenses which were held by the company, and which were alleged to have been assigned to the Royal Trust Company and Hugh Robertson some months before the suspension of the concern, but of which no notice was given to the Crown Lands Department. It is understood that under the agreement of settlement the sum of $10,565 has been paid to the lumbermen on account of their claims, and their protest has been withdrawn from the Crown Lands office.

The licenses of these lands will issue to the assignees of the Maritime Sulphite Fibre Company. The money mentioned has been deposited to the credit of the liquidators and the solicitors of the lumbermen in the Bank of Montreal at Chatham. Nothing now stands in the way of the present owners of the mill operating it, or of their disposing of it to any person or company who may desire to run it.

PULP NOTES.

The pulp mill at Peribonca, Que., has commenced the manufacture of cardboard.

The Belgo-Canadian Pulp Company, of Shawinigan Falls, Que., have commenced the erection of a paper mill. The operation of the pulp mill has not been found profitable, but it is thought that in conjunction with the manufacture of paper the results in the future will be more satisfactory.

A deputation consisting of Messrs. J. T. Lord, of Nashua, and W. T. Clothier and E. Rop, of Lewiston, Me., representing the Self-Closing Bag and Paper Company, recently made an inspection of the district around Shawinigan Falls, Que., for the purpose of selecting a site for a pulp and paper manufacturing plant. They were accompanied by representatives of the Quebec Government.

The Baie St. Paul Lumber Company has been incorporated with the Secretary of State at Albany, N.Y. The capital stock is $100,000, and the principal office is to be at Syracuse, N. Y., with Canadian headquarters at Baie St. Paul, Que. The company own extensive timber limits in Qnebec and will engage in the pulp industry. The directors are H. A. Moyer, C. M. Skiff and George T. Skiff, of Syracuse ; E. G. Latte, of Friendship ; Daniel K. Condon and F. R. Brown, of Wilcox, Pa.

The last report of the St. John Sulphite Pulp Company, of St. John, N. B., expresses regret that the improvement which the directors expected towards the end of the last year did not take place. Prices still remain unprecedently low, while the cost of the raw material has increased. At the date of the formation of the company the price per ton of pulp was $46, while at the present time it is only $34, or a difference of $12 per ton. On the other hand, the cost of the raw material has advanced about $5 per ton. It was stated that it would be necessary to provide additional capital in order to continue the operation of the plant.

Sold by
The Jenckes Machine Company, Limited
1115 Lansdowne Street
Sherbrooke, Quebec

THE THORNBURY GASOLINE ENGINE AND FOUNDRY COMPANY, LIMITED.

The Thornbury Gasoline Engine & Foundry Company, Ltd., Thornbury, manufacturers of gasoline engines and other varieties of light machinery, have a fine two-storey brick fireproof building, 75 x 40 feet, situated in close proximity to the Grand Trunk Railway lines and overlooking the bay, which affords good shipping facilities.

Their motive power at present indirectly is steam and directly a gasoline engine of twelve horse-power. A much larger engine is in course of construction. The machines used are of the latest Canadian and American types.

The moulding room is very modern with a present capacity of nearly 10 tons per day.

The shareholders of the company, with J. H. Carmichael as president, are mostly mechanics, which is an assurance that the work turned out will be satisfactory. While the company's present daily output is large, they are not yet in complete operation, but expect to be by 1st of December, at which time they will employ twenty men for a start. They are at present completing a large order for boiler gratings and other castings of this style.

Peter Thompson, of Mildmay, Ont., has purchased a timber limit on the Peninsula and is making arrangements to build a saw mill there.

AN IMPROVED SAW MILL.

The Enterprise Manufacturing Co., of Columbiana, Ohio, make a new improved 1903 Buckeye saw mill in four sizes, Standard, Medium, Heavy and Class E No. 5. They guarantee it to be modern and up-to-date. It is fitted with Hempy's Patent Variable Feed. This feed is simple and one of the best variable feeds made. Mill men having used other variable feeds should not condemn this feed without examining its merits. It will feed from ¾in. to 5 inches to every revolution of saw, and gig back 9 inches. It can be changed in an instant at any time, and will pull the largest log under any circumstances.

The wear on this feed does not affect its proper working, and no part of feed is running except when feeding or gigging back, thus insuring long life to the works. The shafts do not wear out of line as in other variable feeds. They use one friction wheel for the feed and one for the gig back. The feed is changed by a separate lever which regulates the log that feeds into the saw, while the feed and gig are operated by the same lever.

Those interested should send for illustrated catalogue and price list.

Lammers & Goldrick, who have recently purchased forty square miles of timber limits on the Duncan river, in British Columbia, purpose building a large saw mill at Nelson.

"SOO" MILLS RESUME OPERATIONS.

The saw mill of the International Lumber Company at Sault Ste. Marie, Ont, which is one of the industries of the Consolidated Lake Superior Company, resumed operations on November 17th, employing 125 men, and it is said that it will be operated to its full capacity throughout the winter. J. S. Fackenthal has also given orders to the superintendent of the veneer mill to commence work as soon as the necessary men can be secured. The pulp mill resumed work on November 10th, and at time of writing the impression is that the charcoal plant is to be started very shortly.

RAILROAD FACILITIES.

The old Michigan lumber line, the Flint & Pere Marquette R.R., are now in Canada, having taken over the Lake Erie and Detroit River Railway. The Pere Marquette in its day carried an immense amount of Michigan pine lumber, and still retains the trade of lumber dealers in that state. The company's lake ferries from Ludington to Manitowoc brought over train load after train load of Wisconsin's pine lumber to the eastern states. Now that the Pere Marquette is in Canada with its fine equipment and up-to-date rolling stock our lumbermen will find increased facilities for the import or export of lumber across the line. From a pioneer logging road the Pere Marquette has jumped into a leading position as one of the foremost of the great railroad systems on this continent.

THE CANADIAN FORESTRY ASSOCIATION.

A meeting of the Board of Directors of the Canadian Forestry Association was held at the office of Mr. E. Stewart, Dominion Superintendent of Forestry, Ottawa, November 13th. The Treasurer reported the receipt of a grant of $300 from the Government of Ontario to assist the work of the Association and that the Governments of Quebec and British Columbia had also promised assistance, and a special vote of thanks to these Governments was passed.

The membership of the Association is steadily increasing, having now reached the number of 420, and with the improved financial position in which the Association finds itself, it is proposed greatly to extend the sphere of its activities. The establishment of a journal devoted specially to forestry interests was discussed, and it was decided to report favorably to the annual meeting. The publication will, if started, be managed by the association and will probably be at first in the form of a quarterly with the expectation of being finally issued as a monthly. It is hoped in this way to call public attention more distinctively to the work of the Association and to the importance of proper forest management.

Preliminary arrangements were made for the annual meeting to be held in Toronto on the 10th and 11th of March next. Several of the leading foresters of the United States are to be invited and papers will be read by prominent Canadian lumbermen and scientific experts. A public banquet at the King Eward will be one of the features of the meeting.

It was proposed to invite the American Forestry Association to hold their summer meeting in Canada, but as that association will likely hold their meeting in St. Louis this year the Canadian Association may join with them and visit the Exposition also.

ENCROACHMENT UPON RIGHTS OF WHOLESALERS.

The following resolution was adopted at a joint meeting of the Tonawanda, Buffalo, Cleveland, Toledo, Saginaw and Bay City lumbermen, held at the Russell House, Detroit, Friday, November 20th. The resolution explains itself:

"Whereas it is reported that certain manufacturers of white pine, norway, hemlock, etc., who have been selling the wholesalers in the lake markets, have also been active in soliciting and selling a class of trade which properly belongs to the wholesalers, and

Whereas such action is against the interests of the wholesale dealers;

Therefore, be it resolved, that said manufacturers be requested to consider the rights of the wholesalers and avoid future transactions that are detrimental to our mutual interests;

And be it further resolved, that in case manufacturers persist in selling trade that properly belongs to the wholesalers, that as soon as such sales are known, a report of the same be made to our respective associations and the secretaries be instructed to notify all other wholesale markets;

And be it further resolved, that a copy of this resolution be sent by the secretary of this meeting to all the trade journals so that the attention of the manufacturers be called to this resolution."

A WELCOME VISITOR.

In remitting subscription for THE CANADA LUMBERMAN, Mr. F. J. Snider, of Bruce Mines, Ont., writes: Your paper is quite a convenience to persons interested in the timber trade, up in this locality especially. It is a very welcome weekly visitor.

BLEST BE THE TIE THAT BINDS.

It was most assuredly a "good year" for the lumbermen of the country who have occasion to transport their lumber by wagon either in the log or manufactured, when the manufacturers of the Goodyear load binder placed their device on the market. The driver of the army mule has from time immemorial, and it may be conceded, will continue to do so until the crack of doom, "borne the palm alone" for fracturing the fourth commandment. The "mule skinner" and "bull puncher" of the lumber camp, and their co-laborer, the teamster of the city, were nearly dethroning the military man, and might have succeeded had the introduction of the Goodyear load binder been longer delayed.

In the lumbering district of North-western Ohio, a few years ago, there lived a man named Rogers who owned a sawmill and who was, incidentally, a blacksmith. He was hauling logs one day, and after breaking two or three poles and doing himself injury, bodily as well as morally, in trying to bind a load, started for the shop resolved to make a substitute for a boom pole. The result was the load binder. The invention was soon in the hands of the trade and it is now in use all over the world. Like all inventions so simple in construction and so effective in application, comment has been general as to why it was not earlier evolved.

In the yards, as well as in the woods, the average teamster spends from ten minutes to half an hour trying to bind his load of lumber or logs safely with a piece of two by four, a crooked pole or an iron bar, and it is a matter of conjecture just how far the load will get before a spill. Again, in the tugging and straining necessary in the old-fashioned method many a valuable piece of lumber has been culled or rejected on account of being mashed by the chain pressing into it. In the Goodyear method you can tell by the eye how much slack has to be taken up and you simply have to insert each of the grab hooks of the binder into the chain and close it. This takes up the slack and the load is firmly locked. The handle, clevis and hooks of the Goodyear binder are made of the best malleable iron. It is very easily adjusted and has a powerful leverage. The binder when open has a spread of twenty-two and a half inches and closes up to eighteen inches, taking up a slack of four and a half inches. A pair of them weigh only twenty-one pounds. Eugene C. Stacey, Bloomdale, Ohio, is general sales agent, and further details concerning this binder can be obtained by communicating with him. His advertisement appears on page 30.

REMOVING A GREAT EVIL.

If you are ever short of steam, or if you have refuse you would like to use for fuel, but cannot burn, why not write to the Gordon Hollow Blast Grate Co., Greenville, Michigan, whose well known grate keeps steam blowing off all the time, and burns wet, green or frozen sawdust or other refuse readily?

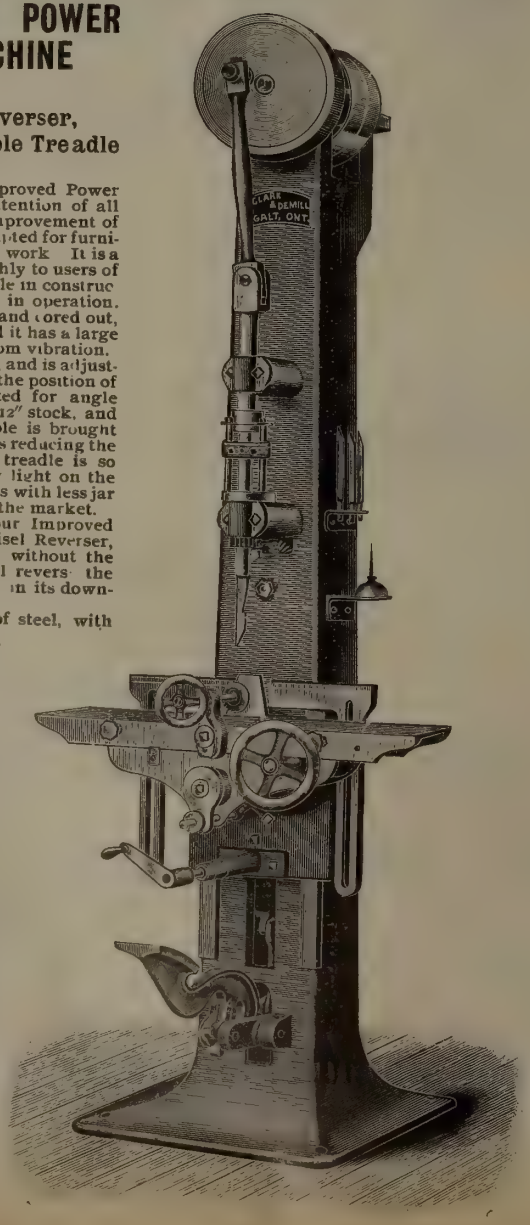
NO. 25 IMPROVED POWER MORTISING MACHINE
With Tilting Table, Automatic Chisel Reverser, and Adjustable Treadle



OUR new designed No. 25 Improved Power Mortiser is worthy of the attention of all wood workers interested in the improvement of machinery of this class. It is adapted for furniture cabinet, sash door and blind work It is a tool we cannot recommend too highly to users of this class of machinery. It is simple in construction easy to manipulate, and rapid in operation.
The frame is cast in one piece and bored out, making it very stiff and strong, and it has a large base thus freeing the machine from vibration.
The table is long and compound, and is adjustable to and from the chisel to suit the position of the mortise Can also be adjusted for angle mortising. Will drop to receive 12" stock, and mortise to the centre of 6". The table is brought up to the chisel by foot treadle, thus reducing the strain on the chisel spindle. The treadle is so compounded that the strain is very light on the operator's foot This machine runs with less jar than any other similar mortiser on the market.
The head is supplied with our Improved Automatic Spindle Guide and Chisel Reverser, which holds the spindle in position without the use of keys or set screws and will reverse the chisel by the action of the table in its downward travel.
The Treadle Rod is made of steel, with brass bushings and steel crank pin.
Some of the advantages: No friction belt to get loose or run off, which has caused so much trouble and waste of time repairing in the past. The chisel can be reversed as well when the machine is standing as when in motion.
Chisels Each machine is furnished with six chisels, namely, 5-16" 3-8", 7-16", 1-2" 5-8" 3-4".
Tight and loose pulleys run between bearings and are 12" x 3¼", and should run 550 revolutions per minute
Bearings and loose pulleys are all self oiling.
Weight of machine 1400 lbs.
No 26 Machine is the same as No 25, only it has boring attachment, and is furnished with 6 Borer Bits to suit the above size chisels, which spindle is in a line with the chisel spindle. The work can first be bored, then fed under the chisel and mortised without being taken from the table.
Weight of machine 1500 lbs
Cut Gears. We use Cut Gearing on all our machinery.

MISCELLANEOUS SUGGESTIONS ON EMERY WHEELS.

An emery wheel is a circular file; if on some particular work a wheel does not run well, it may often be made satisfactory by changing the speed.

If a wheel fills or glazes it suggests that it is speeded too high, or is too hard for the work.

Start new wheels on slow speed cone. Endeavor to maintain the rim speed as the wheels wear down, or, in other words, increase the speed of the spindle as the diameter of wheel decreases. Keep the wheels perfectly balanced and true by use of emery wheel dresser.

Keep the boxes well oiled and free from dust. Look out for heating and expansion of arbors.

Don't leave your machine running if the bearings are not well oiled, as your arbor may get hot and expand and burst the wheel.

Don't run a machine if the arbor is loose, as it will jump and not do good work, and may break the wheel.

Don't put a wheel on the floor when you take it off the machine; have a shelf to put it on. Take good care of the wheel if you want it to do good work.

Avoid heavy contact of wheels with work, as this causes a wheel to glaze and fill up much more rapidly than a light contact.

Never hack wheels, as they are liable to be broken or cracked so badly that they will break in use. Wheels should be run toward the operator.

The working strain is as the square of the velocity. If the revolutions be doubled the working strain will be increased four times.

Never crowd a wheel upon an arbor. Don't mount it unless an easy fit. Use good sized concaved flanges. Never mount wheels without flanges.

If a wheel shows soft toward the center, it suggests that it has not been speeded up as it wore down, so that the rim speed has become slower, which causes the wheel to wear away faster and to appear softer.

Have your emery wheel equipped with dust pipe and exhauster where possible.

Remember that wheels do not often break from inherent weakness or defects. Most accidents arising in the use of wheels are due to carelessness or ignorance.

Common causes of accidents are: Catching of work between the wheel and the rest; heating and expansion of arbors; using too small or too light flanges, and not having them properly concaved; not using any flanges, but simply screwing on a nut against the wheel; allowing arbors to become loose in the boxes from cutting and wear; running wheels on shaky machines; allowing the emery wheel to descend on the saw tooth, or feed finger to push against the wheel when in throat.—Packages.

The enterprising firm of Macpherson & Schell at Alexandria, Ont., operate a large saw mill, veneer mill, sash and door factory and machine shop. For many years they have been large users of iron castings and now propose to extend their business by the erection of a foundry for turning out castings.

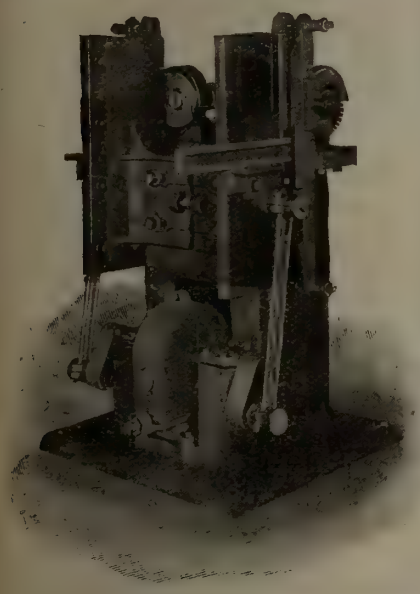
ALWAYS SOMETHING NEW.

The lumber manufacturer or logging operator who does not read carefully his trade journal is sure to miss many ideas which would be found useful to him in his business. The pages of the CANADA LUMBERMAN contain the advertisements of the most wide-awake manufacturers of saw-mill and wood-working machinery, logging appliances, etc. Every month some new and improved appliance is placed on the market. Keep up with the procession by investigating the adaptability of these appliances to your own particular case, and when the opportunity is presented tell the advertiser how interested you are in his announcements in THE LUMBERMAN.

SHERMAN

FLOORING MACHINES

Patented.



The above cut shows our End Matcher, the best machine in the market for end matching flooring strips. They do their work quick and slick, that's why so many them are in use.

WE MAKE THE

Sherman Side Boring Machines,

To bore flooring run face up for face down, and the

Sherman Face Boring Machines,

To bore jointed flooring.

Our Boring Machines are for attachment to any matcher. Send for circular with list of users; you can then inquire about our machines.

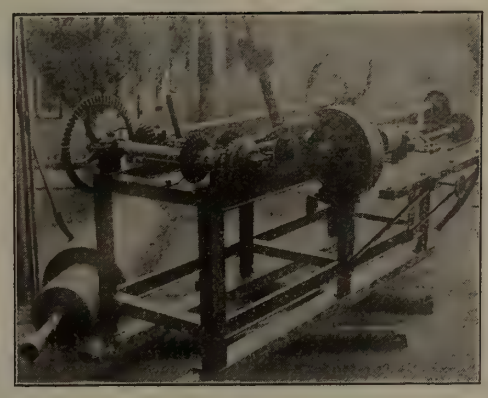
Saw Grinders



The Kennedy Island Mill Co., Ltd., Riviere du Loup, Que., says—

"I might say to you that this Grinder is all right and has paid for itself twice over since I bought it. No Shingle Mill of any account should be without one."

TRIMMERS

If the Board does not reach the quadrant the Saw stays down and trims, see cut. To cut off more than two feet, bad ends, etc., pull the cord, see dotted lines. The whole Board can be cut into two foot lengths or trimmed in any manner. The Saw frame is balanced, the Arbor pulleys are 8 in. x 8 in. We build several styles of Trimmers, also all kinds of

Saw and Shingle Mill Machinery

Our "Boss" Shingle Machine is second to none in Canada. Our sales will prove it. We make Saw Jointers and Knife Jointers, also Packing Boxes. Send for Catalogue.

B. R. Mowry & Sons, CRAVENHURST, ONTARIO

PERSONAL.

The death occurred recently of Mr. Thomas Brinacombe, who conducted a saw mill at Hayden, Ont.

Mr. W. H. Edger, for several years foreman in the saw mill of the Rat Portage Lumber Company, Rat Portage, Ont., has accepted a similar position in the company's new mill at Winnipeg.

Mr. John Hendry, manager of the British Columbia Mills, Timber & Trading Company, Vancouver, is the vice-president for British Columbia of the Canadian Manufacturers' Association for the year 1903-4.

Mr. Frank Harrison, of the lumber firm of Frank Harrison & Company, Liverpool, England, was a recent visitor to Canada in the interest of his lumber importing business. Mr. F.E. Neale, of Chatham, N. B., is the Canadian representative of the firm.

On November 9th Mr. Alex. McQueen died at Guelph, Ont., at the age of 88 years and 4 months. He came to Canada when eighteen years old and settled at Oakville, later renting a saw mill at Everton and teaming lumber to Fergus, when there were only a few houses in the hamlet. His late life was devoted to farming.

Mr. J. H. Walker, formerly manager at Toronto for the Canadian Rubber Company, has been appointed sales manager for the Dominion Belting Company, of Hamilton, Ont., and will enter upon his duties at once. Mr. Walker's intimate knowledge of this branch of the trade, gained during a long practical experience, should prove beneficial to the interests of the company with which he is now identified.

TIMBER FOR RAILROADS.

It is announced that the Pennsylvania Railroad has decided to plant 50,000 locust trees along its line, the timber when sufficiently large to be used for ties. The movement has been rendered imperative, it is said, by the shortage in the supply of wooden ties, and the problem has become so serious of late that several companies have discussed the matter in their annual reports. It is thought that other railroad companies will pursue the policy adopted by the Pennsylvania Railroad.

The Bertram Engine Works Co., of Toronto, announce on page 27 of this number of THE LUMBERMAN that they manufacture all kinds of engines and boilers, both stationary and marine, also make composite ships and do repair and jobbing work. The company wish to emphasize the fact that their business is not confined to marine work. Correspondence from lumbermen will have careful attention.

Williams Craddock, who established a wood-turning plant at Upper Woodstock, N. B., last year, is understood to have sold out to an English company. Mr. Craddock will remain as manager and will remove the plant to Woodstock, where a new building will be erected. It is stated that the establishment of a veneer plant in connection with the enterprise is under consideration.

Good Reasons Why OUR CORRUGATED IRON Is preferred by those who know.

We use only best Apollo or English sheets.

The corrugations are pressed one at a time—not rolled—fitting perfectly, both at ends and sides without waste.

No scale, pin holes or other defects are ever found in our goods.

The galvanized sheets are coated on both sides with all the galvanizing material that can adhere to them.

The painted sheets are coated on both sides with Sherwin-Williams best quality paint.

We furnish any size or gauge required—either curved or straight.

If you desire durable quality and certain economical satisfaction, send us your specifications or write for further information.

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

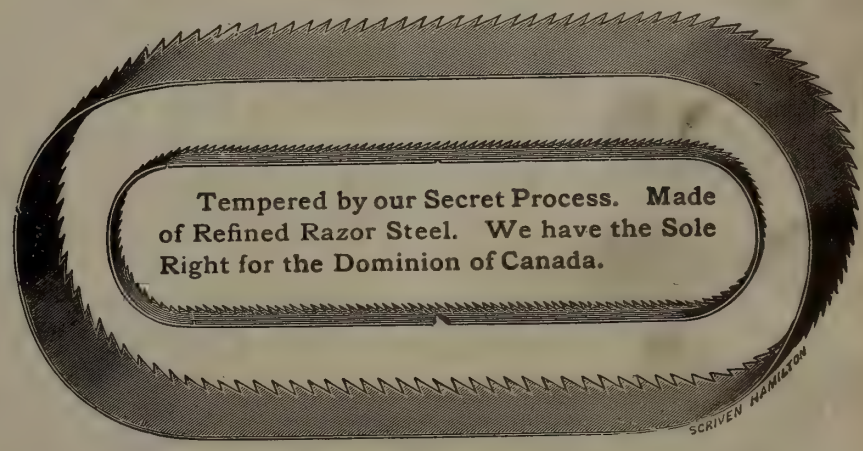
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

Of All Widhs and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

THE STOUFFVILLE BRASS & STEEL WORKS,
Stouffville, Ont.

Burks Falls, Ont., Feb. 13, 1903.

GENTLEMEN,—In answer to your inquiry with regard to the S. George Lumber Register, we desire to say that it has given every satisfaction. We put in one of 18000 ft. capacity lineal in the spring of 1902 and have used it constantly ever since and it has never given any trouble whatever, has never been out of order or laid up for repairs. We may further say that we are so well pleased with it that we have ordered another of the larger capacity of 60,000 ft. lineal, which we intend to use on another machine In conclusion we may say that we do not see how this machine could be improved upon and we feel certain that it will be a long time before a lumber register is produced which will be superior to the S. George. Yours truly,

THE KNIGHT BROS. CO., HENRY KNIGHT, Manager.

EMERY GRINDERS

The annexed cut represents our latest and most improved style of Emery Stand and the incessant demand for a frame that will resist the vibration of the stone when running at full speed has made us particularly careful to make "rigidity" one of the principal features of the same.

FRASER & COMPANY'S NEW MILL AT DESCHENE.

The new saw mill of Fraser & Company, which was erected during the winter of 1902-3, is situated on the north shore of Lake Deschene, on the Ottawa River, about 7 miles above Ottawa city, and on the line of the Hull Electric Railway and the Pontiac branch of the Ottawa, Northern and Western Railway. It is one of the most up-to-date mills in Canada.

The foundation of the main building and lath mill is laid on concrete piers, which go down to solid rock, and each post of the mill frame rests directly upon one of these, thus obviating the necessity of bottom sills. The mill proper (Fig. 2) is 85 feet by 208 feet long, and the lath mill annex 45 feet by 55 feet.

The sawing floor at present consists of two Allis-Chalmers double-cutting telescopic band mills, with two of Waterous' heavy cast steel carriages, one having trailer for long timber; one Mershon 7-foot band resaw, and two Rogers' double edgers, one of these edgers being arranged with a gang side of ten saws to take 8 inch cants. Fig. 1 shows the two double cutting band mills and the resaw.

Each or any one machine can be stopped or started independent of each other, all of them being arranged with clutches or frictions.

The live rolls from the bands extend in front of the log deck, the log being carried over these by a steam log loader with extended arms; the lumber on the back cut drops on these rolls and passes through the throat of the mill where all lumber and slabs are tripped to the re-saw edger or slash as required, or, if finished, allowed to pass on to end of rollers.

The resaw is situated directly between and behind the band mills and takes cants for centre cutting and any large slabs, from each mill. The edgers are situated further down and between the live rolls from band mills and resaw, with live transfers so arranged that sidings can be tripped by the off-bearer to either edger from the resaw. All three sets of rolls continue over the slash chains, where slabs are tripped off and the finished lumber passes on from the edgers or live rolls, as the case may be, and is received upon a set of three live camels back or No. 500 chains, which run across the tail end of mill, and is there handled upon the trimming table, which runs upon a slant in an opposite direction and directly under the camel chain,

FIG. 1.—VIEW OF BAND RESAW AND REAR VIEW OF TWO DOUBLE CUTTING BAND MILLS.

FIG. 2.—WEST SIDE OF MILL AND PART OF LOG POND.

FIG. 3.—VIEW OF YARD.

taking the lumber from the sawing floor to the sorting shed on the ground level.

The sorting shed is some 250 feet long arranged with sets of rollers on each side, the lumber being rolled in stocks upon lorries provided with swing tables and transferred to the yard by horses.

The yard (Fig. 3) is arranged with standard gauge tracks running at right angles with the mill and parallel with each other and spaced about one hundred feet apart. Rollers are also arranged between the piles, which are put up two deep from each track. With this arrangement of rollers the lorries are quickly unloaded and two men with one horse drawing two lorries load and unload between 50,000 and 60,000 feet per day on an average draw of nearly half a mile.

The shipping is done from the same tracks, empty cars being drawn from the siding which enters the rear end of the yard and placed opposite the piles required, and when loaded again drawn to the siding for the engine to take hold of. When the yard is finished there will be from ten to fifteen of these tracks, all connecting with the siding from the railroad at one end and the siding from the mill at the other.

The power plant consists of a solid brick power house, 70 feet x 80 feet, with an iron and steel grider roof, containing six boilers of 150 horse power each, suspended from heavy steel beams in batteries of two each, and arranged with Dutch ovens. The boilers and fittings complete were supplied by W. J. Campbell & Sons, of Ottawa. The engine is a heavy type Reynolds Corliss of 750 horse power, built by the Allis-Chalmers Company, of Milwaukee. Only four of the boilers are at present being used, the other two being for spares or for power in event of increasing the cutting capacity, there being room left for a pair of twins and a gate, or another band mill, to be added.

The mill was built under the direction of Mr. Charles Proper, the well known millwright of Ottawa, asisted in superintendence by Mr. J. A. Story, manager of Fraser & Company's sawn lumber department. Mr. Proper has built twenty-two mills in Canada and the United States, including the mills of J. R. Booth, Gilmour & Hughson and the Hull Lumber Company at Ottawa, McLachlan Bros. at Arnprior, and the James Maclaren Company at Buckingham. He is one of the most capable millwrights of the day, and the new mill of Fraser & Company is a splendid example of his skill.

The head office of Fraser & Company is at 74 Nepean street, Ottawa.

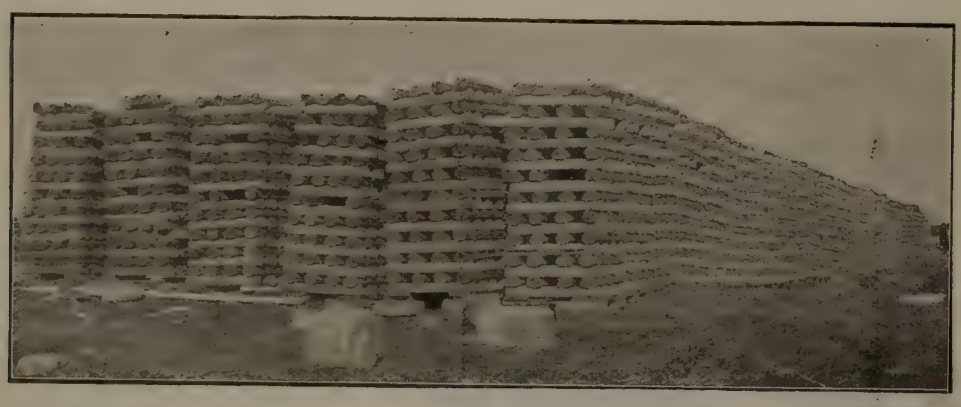

FIG. 4.—LATH PILED IN YARD.

THE QUESTION OF A LUMBER DUTY.

[CONTRIBUTED.]

Supply and demand are, as they have always been, factors paramount in regulating the prices of commodities, and, of course, lumber is a much sought after commodity and subject to the same great law.

Competition is a strong force in regulating prices, and may be said to be a subsidiary to supply, inasmuch as it works on and through supply. In times of prosperity competition is not felt so keenly, but when depressions come its every manifestation is felt by each of its parts in the same line of business.

The lumbermen of British Columbia are feeling this competition from their rivals on the American side, and are agitating to bring about redress of certain existing greivances. They are appealing to the Dominion Government for better legislation in the matter of duty, and the following remarks may help to show the justice of their contention.

During five months at the beginning of 1903, there was imported into Canada timber and manufactured lumber to the value of $3,609,272, of which $745,432 was dutiable and $2,863,840 free of duty. Of the full amount imported over 96 per cent. came from the United States, and of this 96 per cent. 80 per cent. was free and the rest dutiable, or for every dollar's value imported therefrom on which we collected revenue, there was $4.36 on which we collected no revenue, and not only did over 96 per cent. of all the imports come from the United States, but 78 per cent. of the total amount came on the free list from them. Of this amount on the free list, about 92 per cent. consisted of timber, planks and boards.

The Eastern States depend largely for their supplies of spruce, pine, hemlock, etc., on Ontario, Quebec and New Brunswick, and therefore those provinces will scarcely be buyers of such commodities from the States, and hence the bulk of the imports, especially in pine, spruce, cedar, fir, hemlock, etc., are taken into the prairie provinces of the Dominion and to a very large extent are the product of the Western American mills.

Again, these Western mills have an advantage over their Canadian competitors in that, not only are they protected by their own high tariff rates, but they have the same freight rates over their railroads to most places in the Canadian West as the Western Canadian manufacturers, and besides they have the same access to Canadian markets as the Canadian himself for those lines which they find most difficulty in disposing of in their own country. The proportion of high grade lumber and rough is, generally speaking, about 1 to 3. Almost always there is a demand for the higher grades, while even in a good market persistent endeavor is necessary to dispose of all the coarser and rough grades.

There is a duty in the United States of $1

FIG. 5.—LOAD OF 16-FOOT WHITE PINE SAW LOGS FROM FRASER & COMPANY'S CAMP ON THE COULONGE.

per M. feet B. M. on all timber not less than 8 inches square, of one cent. per cubic foot on boards, planks, deals and others of whitewood, sycamore and basswood; of $1 per M. feet on any other N. O. P.; and $2 per M. feet on rough lumber; on cedar boards, planks or deals 20 per cent. ad valorem; on boards, planks, deals or timbers when planed or finished, 50 cents per M. feet B. M. for each side dressed, and when two sides are dressed and tongued and grooved $1.50 per M. feet B. M.

Now, as we do not ship whitewood, sycamore or basswood from British Columbia, we are subject to a $2 duty on any pine, hemlock, spruce or fir we may wish to send to the United States.

Furthermore, it is only by dressing our dimension stuff to a large extent that we reduce very materially the weight, and are enabled to reduce the cost of freight and so increase the duty. Heavy dimensions are all dressed on at least two sides, and this adds another dollar to the duty charges on shipping into the United States, making a handicap against us of $3 per M. on these grades which we have to bear if we seek to enter American territory with our coarser grades.

And what are the conditions when the American enters our market? Why! he can bring in all his undressed lumber free of duty as well as his dimension stuff, and can even go to the length of dressing one side and still bring it in free. If two sides are dressed he pays then only 50 cents per M. feet duty.

Taking, therefore, these points into consideration and reviewing the position as it is now, the British Columbia manufacturers are more than justified in their contention. The American has his own market entirely protected, where he can sell all his higher grade lines at a fair margin, which profit is good enough to allow him to dump his surplus rough grades into the Canadian market at a figure below the actual cost of production and other charges incurred

in laying it down there, and so to save his own market and seriously demoralize that of his competitors. Such a thing is actually being done at present and will continue as long as the unfair conditions prevail.

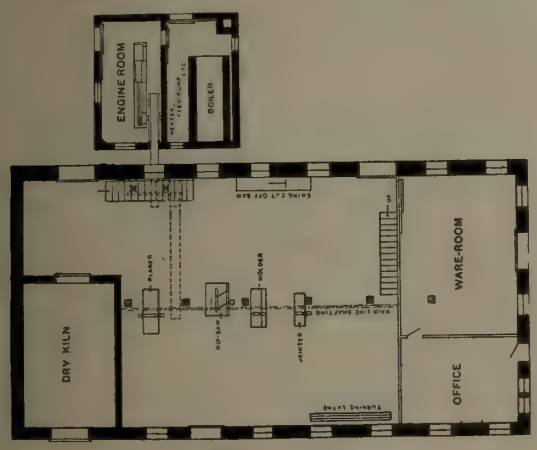
Another point is that the Canadian manufacturers have to pay a duty of 30 per cent. on the majority of their plant which they are compelled to procure on the American side, and so the initial cost of manufacturing is considerably augmented.

The question cannot be too emphatically raised before the Dominion authorities and legislation brought about to immediately remedy the present state of things. The lumber industry is of vast importance to British Columbia and Western Canada, and to protect and foster the expansion thereof is surely a matter of the greatest importance. The contention of the manufacturers to increase the duty to be equal at any rate to that imposed by the United States Government is certainly only fair and just.

PLAN FOR WOOD-WORKING FACTORY.

The engravings show first and second floor plan of a shop designed by Mr. N. A. Curtis and published in the October number of Carpentry and Building, New York city. This shop is designed to meet the requirements in the smaller cities and towns. The main building is of brick, 45x85 feet. The engine room is 22x24 feet. In presenting the plans Mr. Curtis says :

The buildings are of brick, the main one being two storeys and basement in height. The lower storey has a 16 inch wall and the second storey a 12-inch wall. This, at first, may appear heavy, but whether a shop be built in a small town or large city, the building should be equally strong. Especially is this true in a wood-working shop, as there is no class of machinery which receives as rough usage, runs out of balance and tends to shake the walls of a building as that built for working wood. My



FIRST FLOOR.

experience has taught that a few hundred dollars added to the first cost in strengthening the building will double the life of it, while at the same time there will be greater satisfaction in turning out the work. Another reason for strength in building is that if at any time an increase in business demands more room, the roof can be raised and an additional storey or two be put on without fear of the lower portion being too weak to sustain the extra weight. I have provided one row of posts running lengthwise of the building in the basement and first floor, only the basement posts and girders are 12x12 inches, while those on the first floor are 10x10 inches.

The main line shaft is located in the basement, as indicated on the first floor plan. My reasons for running the line shaft under the floor are that the machinery is belted from below, and it runs steadier by bearing down upon it. The belts are also out of the way, allowing freedom of handling stock, which is not obtained when the machinery is belted from above.

Starting at the back end of the shop on the first floor, we have the double surfacer, from which the stuff generally goes to the rip saw, which is conveniently located, and then the material can be laid at the molder or swing cut-off saw, from whence it can be carried up the stairs at either end of the room, according to what part of the second floor it goes. The jointer is located on the first floor for squaring up porch posts, balusters, etc., which afterward go to the turning lathe.

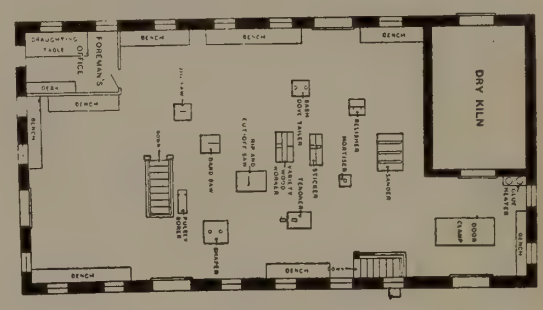
An inspection of the second floor plan will show that all sash, door, blind and other stock which requires laying out on the bench at the head of the rear stairway is convenient to the tenoner, mortiser, sticker and relisher, while the door clamp is at the rear of the building, farthest from the office, and yet handy to the second floor dry-kiln, which can be used to warm the stock before driving up. The reader will find on the second floor a variety wood worker and boring machine, which can be used for all gaining, rebating, plowing, jointing and other work which requires to be worked over a cutterhead. The rip and cut-off saw, as well as the pulley borer, are convenient to the benches where the frames are put together. A triple-drum sander for sanding doors, etc., is conveniently located for the purpose.

As the amount of kiln-dried lumber used in a planing mill is small, I have not provided a very large dry-kiln, yet it is sufficient, I think, for the purpose. For this reason I have placed it inside the main building at the rear, where it is convenient of access when only a board or two is needed.

The foreman's office is located directly over the main office for the sake of convenience, as it permits of ready communication with the foreman when he is wanted. The two doors in front and the four doors on the side enable material to be loaded without the necessity of carrying it from one end of the shop to the other.

The boiler and engine house is separated from the main building for various reasons. In the first place, the engine is out of the dust and dirt of the shop, which will lengthen its life, and, in the second place, all oils, grease and the like can be kept in tin cans in the engine room and in direct charge of the engineer. The boiler is separated from the engine room by a brick wall, and there is also room for water heater, feed pump, etc. The main drive belt runs from the engine to the countershaft just inside of the basement wall of the main building. The countershaft is put up on two 12x12 inch posts, the bottoms of which, as well as the two posts directly in front of them, which hold the main line shaft, are set in iron bases, which, in turn, are anchored to their foundations by bolts. The engine for a shop of this size should not be less than 60-horse power, with a 75-horse power boiler. The main belt from the engine should be boxed over in order to keep all weather from it, and the underground passage for the bottom of the belt should be made wide enough for a man to walk in along the side of belt.

I prefer hot air for heating, as it is more satisfactory, is perfectly safe, and the insurance is lighter where this method is employed. The



SECOND FLOOR.

heater can be located under the second floor, close to the dry-kiln, and can be supplied from the pipe leading to the dry-kiln, thus having but one steam pipe running from the boiler, and keeping all the steam in the rear end of the shop. I have not provided a blower for shavings and sawdust, but this can be arranged to the owner's liking after the building is completed. A system of this kind should be installed in every shop wherever possible, as it will not only pay for itself in a short time, in the saving of labor, but the shop is always kept free from piles of shavings and sawdust, which often hinder the men in their work.

THE LATE MR. F. T. WILKES.

Suddenly on December 17th death summoned Mr. Frederick T. Wilkes, secretary-treasurer of the Waterous Engine Works Company, of Brantford, Ont. He had not even complained of feeling unwell, but as he was walking home he was seized with a fainting spell and expired before medical assistance could reach him. Deceased was in his 56th year, and had apparently been in the best of health up to the time in his death. He was a well-known figure of local business circles, was particularly active, and a man of determination and courage. Born in Owen Sound in 1847, he was the son of Judge Wilkes. He went to Brantford some thirty-five years ago, entering the employ in the Waterous Company. Here he gained of a large measure the practical business ability which in after years contributed so greatly to his success as controller of enormous industrial interests.

Mr. Wilkes never took an active part in public life, but was a careful student of the questions of the day that affected the welfare of the country. Mrs. Wilkes and three sons survive him.

Sycamore is a durable wood, as is shown, for one example, by the excellent preservation of a statue made of it, now in the museum of Gizeh, at Cairo. It is stated that this specimen is known to be nearly 6,000 years old, and is sound and natural in appearance.

THE ONTARIO GOVERNMENT TIMBER SALE

A Remarkable Gathering of Lumbermen.—Keen Competition and Record Prices.—The Sum of $3,687,337.50 Realized for 826½ Square Miles.—An Average of $4,461.38 Per Square Mile.

It was indeed a distinguished assembly of lumbermen which for the time being held the Legislative Chamber in the Parliament Buildings on December 9th—a gathering such as has not been seen at any previous sale of timber limits in Canada. The territory represented extended from Quebec in the east to Winnipeg in the west, while there was also a large attendance of giants of the forest from the United States. Mr. Peter Ryan appeared in his familiar role as auctioneer, and to his right sat Hon. E.J. Davis, Commissioner of Crown Lands, and his Deputy, Mr. Aubrey White. The names of all present could not be obtained, but the following is a partial list :

James McCreary, Arnprior ; Guy H. Moulthrop, Maurice Quinn, Charles Moore, J. Ritchie, S. O. Fisher, H. W. McCormick, E. T. Carrington, R. A. Loveland, E. P. Stone, Bay City, Mich.; C. E. Hewson, N. Dyment, M. Burton, F. E. Letts, Barrie; C. C. Wallace, O. M. Arnold, Bracebridge; S. F. Whitman, Brantford; H. L. Lovering, Coldwater, Ont.; W. L. Martin, Cheboygan, Mich. ; George Gordon, Cache Bay, Ont.; W. T. Toner, Collingwood; W.A. Hadley, C. Hadley, Chatham; A.B. Upton, Duluth, Minn.; W.W. Carter, Fesserton, Ont. ; J. J. McMillan, Finch, Ont.; A.W. Mowry, Gravenhurst; C. McCool, Geneva Lake, Ont.; Hiram C. Calvin, Garden City, Ont.; E. Singer, Guelph; L. C. Dancey, Goderich; A. E. Paget, C. E. Paget, John Whitesides, Huntsville; George McEwen, Hensall, Ont.; Hugh Brennan, E. S. Brennan, William Laking, Hamilton; R.A. Mather, Keewatin; Hon. J. Charlton, Lynedoch; G. H. Belton, D. Ferguson, London; A. McPherson, G.H. Thompson, Longford; J. B. Klock, Mattawa; George McEwen, Moose River, Ont.; D.G. Madagan, Fred Carney, Jr., Marinette, Wis.; W. F. Brooks, T. H. Shevlin, Minneapolis; W. Mason, Montreal; M. J. Brophy, Massey, Ont.; Jos. Turner, D. L. White, Jr., James Playfair, George Chew, Frank Moores, Midland; R. Bunyan, R. Collins, W. Ryan, C. Maguire, North Bay; T. Charlton, North Tonawanda; Rev. A. Fitzpatrick, Nairn Centre; J.B. Fraser, J. C. Browne, E. D. Moore, George B. Campbell, A. McConnell, E. C. Whitney, George Brigham, R. Booth, Hiram Robinson, H. K. Egan, Ottawa, Ont.; J. W. Maitland, Owen Sound, Ont ; G. H. Farwell, H. J. Bartlett, J. H. Lavallee, George McCormick, M.P.P., S. Caswell, B. Inglis Grant, J. B. Tudhope, M.P.P., T. Sheppard, Orillia ; S. Cassel, Otter Lake, Ont.; Milton Carr, M.P.P., Parry Sound, Ont.; R. R. Hall, J. C. Shook, J. B. McWilliams, William Irwin, Peterborough, Ont ; B. Shannon, J. A. Shannon, T. D. Lafrance, Thomas Mackie, M.P., A. T. Mackie, W. R. White, R. W. Gordon, J. H. Burritt, R. Hale, Pembroke, Ont.; A. G. Seaman, Port Arthur, Ont.; W. A. Firstbrook, C. Beck, Dr. Spohn, Penetanguishene, Ont.; T. A. Stewart, Perth ; John Munn, Paisley ; P. Murphy, William Power, M.P., Quebec ; John Mackay, A. C. Mackay, M. J. O'Brien, George B. Ferguson, Duncan Graham, A. Barnet, M.P., John Ferguson, A.G. Boland, Renfrew ; William Margach, D. C. Cameron, Rat Portage ; J. Q. Adams, Ravensworth, Ont.; W.J. Ard, R. Cook, P. McDermott, South River ; J. L. Kennedy, Frank Perry, J. J. McFadden, Sault Ste. Marie, Ont.; W. J. Ransom, Sault Ste. Marie, Mich.; A. McCall, Simcoe; J. M. Diver, Sarnia ; A. G. Walls, Spanish River; D. J. O'Connor, O. E. Elsmore, F. Cochrane, A. B. Gordon, W. J. Bell, Sudbury; John Gray, W. A. Cockburn, Sturgeon Falls ; Hon.

MR. THOMAS MACKIE, M.P., PEMBROKE,
Who Purchased Berth No. 5, Hammel Township, at $31,500 Per Square Mile.

Arthur Hill, R. H. Roys, Saginaw, Mich.; E. C. Kennedy, Superior, Wis.; A. E. James, Thornhill ; John Waldie, W. N. Tilley, F. N. Waldie, W. P. Bull, H. W. Bickell, William Smith, W. D. Lummis, W. A. Charlton, W. E. Bigwood, W. B. MacLean, George Gray, Walter Laidlaw, John Bertram, C. Sheriff, J. B. Miller, John Donogh, J. H. Eyer, J. M. Thompson, John McDonald, W. J. MacBeth, Jos. Oliver, William Kerr, H. W. Welch, F. T. Verrall, P. Edwards, Thomas Southworth, E. J. Loughrin, Toronto ; A. E. Dyment, M. P., Thessalon; M. P. Kinsella, Trenton; J. R. Brennan, Utica, N.Y., J. D. McArthur, D. E. Sprague, J. M. Savage, Winnipeg; George Cormack, Whitby ; A. E. Drake, Windsor ; F. Maundrell, A. Leischman, Woodstock; G. Kastner, Wiarton; G. M. Tanner, W. H. Tanner, W. J. Sheppard, Waubaushene ; D. A. McEwan, Warina, Ont.

The conditions governing the purchase of the limits were different in some respects from those of any previous sale. The timber was subject to dues of $2 per thousand feet, as compared with $1.25 fixed at the last sale in 1901, and $1 previous to that time. The annual ground rent was increased from $3 to $5 per mile, and the time allowed for the removal of the timber was limited to fifteen years. Considering these facts, the prices realized were remarkable. Shortly after one o'clock, the auctioneer ascended the platform in front of the speakers' dais and pointedly remarked : "Monarchs of the lumber trade, I am pleased to see you here to-day; your presence betokens the confidence you have in the rising values of these coniferous properties. There is no business in Canada or elsewhere that presents such encouraging opportunities as the lumber trade, no business where so few failures have to be recorded. It is unnecessary for me to tell you that from time to time we hear that the value of pine seems to have reached its limit, but it still keeps on increasing. It was said twenty years ago that the price was too high, but we know that it is higher now."

It was evident from the outset that many were present through a desire to obtain limits. The bidding was quick and the competition keen. Every berth offered was disposed of, and in less than four hours the auctioneer had knocked down to lumbermen 826½ square miles of timber lands in the Nipissing, Algoma and Rainy River districts, obtaining therefore $3,687,337.50, or an average of $4,461.38 per square mile. Although a smaller area was sold, the receipts were far in excess of any previous sale. Below are given the names of the purchasers :

C. Beck, 129¼ sq. miles	$545,925
Thomas Mackie, 44¼ sq. miles	476,475
T. H. Shevlin, 131 sq. miles	351,350
Hawkesbury Lumber Co., 27½ sq. miles	337,650
W. J. Sheppard, 42 sq. miles	289,500
C. G. Marlatt, 25 sq. miles	245,312.50
Ferguson & McFadden, 26½ sq. miles	223,775
L. C. Dancey, 14½ sq. miles	171,750
Duncan Graham, 50¾ sq. miles	125,950
W. F. Munro, 9 sq. miles	86,625
J. B. Fraser, 15¾ sq. miles	83,562.50
A. McPherson, 9½ sq. miles	81,375
D. Inglis Grant, 29¼ sq. miles	79,575
Hector McDonald, 36 sq. miles	75,500
J. C. Spry, 8½ sq. miles	45 900
Keewatin Lumber Co., 38½ sq. miles	42,450
George Chew, 36 sq. miles	39,600
Echo Bay Lumber Co., 3½ sq. miles	36,750
Dr. Spohn, 26 sq. miles	35,575
J. D. McArthur, 24 sq. miles	33,600
Arthur Hill, 4¼ sq. miles	30,812.50
D. C. Cameron, 16¼ sq. miles	27,425
John Mackay, 3 sq. miles	27,000
T. G. Brigham, 4 sq. miles	24,400
Mason & Gordon, 3¾ sq. miles	24,375
Burton Bros., 4 sq. miles	22,400
James Playfair, 4 sq. miles	21,000
D. E. Sprague, 8 sq. miles	19,200
T. H. Sheppard, 3 sq. miles	16,800
James McCreary, 5½ sq. miles	16,500
R. Bunyan, 11½ sq. miles	14,375
John Munn, 6¼ sq. miles	11,250
E. S. Brennan, 8 sq. miles	10,000
M. Brennan & Sons, 4 sq. miles	4,400
William Ryan, 8¾ sq. miles	4,375
Herbert Brennan, 3¼ sq. miles	2,925
George McEwen, 2¼ sq. miles	1,800
Total	$3,687,337.50

When Wm. Power, M. P., bid $21,500 for Berth 1, in the Township of Garrow, he was roundly cheered, this being a new high record, but Thomas Mackie, M. P., was not to be outdone, and later secuerd Berth 5 in Hammell Township, 3¼ square miles, at the rate of $31,500 per mile. "I congratulate the giant from North Renfrew," said Mr. Ryan. The highest price obtained at any previous sale was $17,500. This was paid by the Gil-

mour Company in 1892 for Berth 6 in the Township of Peck, comprising 11¾ square miles. The result of previous timber sales in Ontario was as follows :

Date	Square miles.	Highest price per mile.	Average price per mile.
1868.....	38	$ 519	$ 380.17
1869.....	98	418	260.86
1870.....	12	640	640.00
1871.....	487	500	241.62
1872.....	5,031	1,000	117.79
1877.....	375	500	201.97
1881.....	1,379	2,300	532.00
1885.....	1,012	1,250	314.87
1887	459	6,300	2,859.00
1890.....	343	11,530	2,507.00
1892.....	633	17,500	3,657.18
1897.....	159¼	6,600	1,665.07
1899.....	360	8,500	2,010.00
1901.....	399¼	4,700	1,835.41

Speaking of his purchase at the top-notch figure, Mr. Mackie said that he feared no loss. It is understood that there is on the berth a very large quantity of timber which will make splendid stock for the British market, on which no doubt Mr. Mackie is relying. While admitting that it was a profitable sale for the Government, he expects there will be some profit left for him.

The Commissioner of Crown Lands stated that he was more than satisfied with the result of the sale, the receipts being greater than were expected. "The heavy demand for good timber such as is found in Ontario and the building of the Temiskaming Railway were the two principal reasons, to his mind, why such good prices were realized. "This sale was well conducted, the lumbermen had plenty of time to examine the limits and know what they were bidding on," added Mr. Davis, "and I am sure everyone should be satisfied."

It will be observed that practically all the eastern limits went to Canadians. The Americans were apparently not prepared to pay the price, and hence had to be content without the timber. Mr. T. H. Shevlin was a large purchaser of Rainy River berths. He was acting for the Shevlin-Clarke Company, who are building a saw mill at Fort Francis, Ont.

The witticisms of the auctioneer were no doubt responsible for many a bid. By a constant flow of mirthful yet eloquent oratory the bidders were kept in the best of spirts and the importance of the occasion was almost forgotten. As a timber limit auctioneer Peter Ryan stands alone.

AXE HANDLES.

Mr. J. S. Larke, Canadian Commissioner at Sydney, Australia, writes that a trial order for axe handles has been forwarded to a Canadian factory, and if the importing charges are not too high, regular business will result.

A PROFITABLE INVESTMENT.

If you want a grate to burn wet, green or frozen sawdust or other refuse, at all times, summer and winter, rain or shine, without stopping for repairs, or to wait for steam to rise, buy the Gordon Hollow Blast Grate, which is sold on approval after thirty days trial, and of which there are over 2500 sets in daily use. It is manufactured only by the Gordon Hollow Blast Grate Company, Greenville, Michigan.

The Gray & Lawrence Bros. Co. have recently sold but their lumber business at River Charlo, N. B., to Wm. Currie & Co.

A WELL-KNOWN LUMBER SALESMAN.

"To the manner born" may aptly be applied to the lumber salesman whose countenance is shown on this page. Securing in early days a practical knowledge of the lumber business, and being possessed of a geniality which is constantly widening his circle of friends, W. J. MacBeth stands in the front rank as a lumber traveller. He is a Scottish-Canadian, his grandparents having come from Sutherlandshire, Scotland, to Canada by way of Hudson's Bay in 1812, and settled in the township of West Gwillimbury, County of Simcoe, Ontario. His father was the late John MacBeth, lumberman, of Gilford, Simcoe County, who was well known and will be remembered by many of the older lumbermen in and around Toronto.

The subject of our sketch from boyhood assisted his father in the woods, driving oxen, tramping trails, hewing timber, and later in the more responsible positions. He has followed the lumber from the stump to the building, and has thus acquired a knowledge of

MR. W. J. MACBETH.

which he is justly proud. Upon the death of his father in 1881, he took charge of the manufacturing department, the business at that time comprising two mills, one at Gilford and the other at Craighurst, in Simcoe County, and a retail lumber, coal and wood yard, which was the first yard in Parkdale. The pine timber supply finally becoming exhausted, Mr. MacBeth, in 1888, came to Toronto and took charge of the planing mill which had been added to the business.

In 1892 the building trade in Toronto collapsed. It was then that W. J. MacBeth became a lumber inspector and salesman, finding engagement with such representative firms as the Dickson Company of Peterborough, The Boake Manufacturing Company, A. R. Williams Machinery Company, of Toronto, and the J. D. Shier Lumber Company, of Bracebridge, his present employers, with whom he engaged four years ago. The foregoing firms doing an extensive business in rough and dressed lumber and sash and doors, it has given Mr. MacBeth an opportunity of acquiring a thorough knowledge of the trade, which is one of the reasons why he stands in the front ranks. He has a fund reminiscences, amongst which the following are worthy of mention :

Although only a little more than a decade ago, the prices then realized for lumber present a striking contrast to those ruling to-day. "I remember," said Mr. MacBeth to the writer, "buying a stock of first and second oak at $12, and some hemlock at $5.50 f.o.b. cars at Hillsdale. To-day this oak is worth $45 and the hemlock $12. In 1881 I bought No. 1 white pine saw logs delivered at the mill in Craighurst for $3.50 per M. feet. At the timber sale on the 9th ultimo white pine brought from $8 to $10 per M. stumpage, and this pine is not nearly as good as that I bought for $3.50. I sold clear and picks at $24, common stocks at $8.50 and mill culls at $3.50, and these were considered top notch prices." Thus it can be seen that time is a worker of wonders.

The output of the Shier Lumber Company's mill is about 14,000,000 feet annually, consisting of pine, hemlock and hardwood lumber. The selling of this stock is entirely in the hands of Mr. MacBeth, who has a wide connection in both home and foreign markets, having sold a large block of this year's output to a British exporter. In this connection it may be stated that Mr. J. D. Shier was the pioneer in the end-matched hardwood flooring business, Mr. MacBeth having induced him to put in the first end matcher in Canada for the production of this class of stock, which has now a large sale. Mr. Shier also had the courage to install the first single-cutting as well as the first double-cutting band mill in Ontario.

In Mr. MacBeth we have also an authority on inspection, and his advice is frequently solicited. He is a member of Kerr Lodge No. 230, A. F. & A. M., and, as will be seen, is a Hoo-Hoo, having been initiated as a charter member of the Toronto Association on July 7th, 1903. He makes his headquarters in Toronto, his family residence being at 120 Macdonell Avenue.

A VAST MACHINERY CONTRACT FILLED.

The Dodge Manufacturing Company of Toronto, Limited, has completed its large undertaking to furnish the machinery and special castings for the new million bushel elevator of the Harbor Commissioners at Montreal, and in carrying out its part of the work has delivered about 250 tons of elevator machinery and special castings. The huge steel marine leg that has been successfully placed in this elevator is said to be the largest in Canada, and its successful completion, together with the rest of the work, has won the cordial approval of the contractors, the Government inspectors and engineers. This job shows the extent of the facilities of the Dodge Company since its many additions, and its plant to-day, consisting of a modern foundry with a fifteen ton per hour cupola capacity, travelling cranes, up-to-date machine shops and tool rooms, pattern shops, fireproof pattern stores, general offices and expert engineering department, is well worthy of a visit.

A GOOD SALESMAN.

Messrs. Thomas Myles' Sons, Hamilton, Ont., write : "Please discontinue our advertisement in your paper (THE CANADIAN LUMBERMAN.) We wish to state that we had a great number of replies. Kindly accept our thanks."

One Copy, Weekly and Monthly, Six Months, in advance.. 5
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

LUMBER PROSPERITY.

The year 1903 will always bring pleasant recollections to lumberman. It was a year marked by unusual prosperity, and interruptions to the steady movement of trade were comparatively few. The lumber manufacturer did not worry about selling his lumber, nor the machinery manufacturer or dealer about disposing of his goods. There was a demand for everything, consequently good feeling prevailed. A very large number of persons were given employment by the lumber industry, and at wages higher than were ever known before. This has in turn been a source of benefit to the country at large. The exceedingly high scale of wages, however, has greatly curtailed the profits accruing from lumber manufacture.

Indications point to a continuation of prosperity during 1904, but perhaps in a lesser degree. The Presidential election in the United States is sure to be a disturbing factor in that country, which may buy less Canadian lumber than in the past year. We must not forget, however, that our own industries are developing very rapidly, consuming greater quantities of lumber, and we are gradually becoming less dependent upon foreign markets.

THE CANADA LUMBERMAN enjoyed its full share of prosperity during the year. The number of subscribers has increased nearly fifty per cent., while the advertising pages bear testimony to the liberal support that has been extended in that direction. This number marks the commencement of the twenty-fifth year of publication. Our aim in the future, as in the past, will be to make the journal fittingly accord with the great industry which it represents.

To our readers we extend a hearty New Year's Greeting. May 1904 bring prosperity in plenty, but of ill-luck not any.

THE ONTARIO TIMBER SALE.

In more than one respect the Ontario Government may be congratulated upon the success of the recent sale of timber limits. First, the excellent prices which were obtained, being an average of $792.00 per square mile higher than had ever been obtained before, is evidence that the sale was held at an opportune time and that it was conducted in a manner calculated to encourage the keenest possible competition. A factor to that end was, no doubt, the division of the limits in most instances into small blocks. Secondly, if such were needed, the sale would seem to justify the building of the Temiskaming and Northern Ontario Railway and the general policy of railway construction through unsettled lands. Many of the limits sold are located adjacent to the Temiskaming road, and it is estimated that its construction increased their value to the province fully one million dollars. It is perhaps only fair to state that the increase in the stumpage dues from $1.25 to $2.00 per thousand feet was also a wise step from the Government's point of view, whatever may be said to the contrary by the lumbermen.

It is not only the Government that has been benefitted by the sale. The value of all standing timber has been increased and all owners thereof enriched. Future calculations will be based on a bonus value of seven dollars per acre instead of about five dollars, as in the past. Nor must we lose sight of the fact that while the average price paid was seven dollars per acre, one limit commanded almost fifty dollars per acre. There could be no stronger proof of the great and ever increasing value of white pine. This splendid timber is, of course, becoming scarcer, but the Province of Ontario still possesses no inconsiderable quantity, and the recent sale is an incentive to preserve it as an asset. Not only is it an incentive to the Government, but to all owners of timber.

The time limit allowed for cutting the timber purchased has been the subject of some criticism, on the ground that it is practically giving a bonus for removing the timber within the specified time of fifteen years. This brings up the question of the advisability of granting long term or perpetual leases, on which there are widely differing opinions, and whether the timber is likely to be better preserved under private ownership or in the hands of the Crown. In justification of the application of the fifteen-year regulation to the sale in question, it is pointed out that the total quantity disposed of represents probably not more than two years' cut.

EDITORIAL NOTES.

The timber industry will benefit materially by the construction of the Grand Trunk Pacific Railway. The tie contract alone, which will probably be given to one general contractor, will be a large undertaking, not to speak of the vast amount of timber that will be required for the construction of bridges, stations, fences, etc. The number of ties required for the entire distance of four thousand miles will probably not be less than ten million, which on the basis of the present price of thirty cents per tie, would mean an expenditure of three million dollars. As along a considerable portion of the proposed route timber is quite plentiful, the supply of ties is likely to be obtained at a comparatively low cost.

Another advance has been made towards uniform grading of hardwood lumber by the agreement last month upon certain rules to be recognized by the members of the National Hardwood Lumber Association and the Hardwood Manufacturers' Association of the United States. These rules will in future be the sole official inspection of the hardwood lumber trade of that country. The text of the agreement will be found elsewhere in this issue.

The Dominion Goverment, through the Department of Indian affairs, is about to dispose of a mill site in the Rainy River district by public auction, the purchaser of which must agree to erect on the property within one year a saw mill and factory to cost not less than $25,000. Is it not in the interest of all concerned that as large a number as possible of the lumbermen should have been informed of the proposed sale? We think so. Yet when the CANADA LUMBERMAN, the only lumber journal in this country, solicited the advertisement we received the familiar reply that "your request cannot be complied with, as it has been decided to limit the advertisement to the papers already authorized." Apparently the advertisements of the Dominion Government are placed without regard to the value of the publications, and to this extent the property of the Crown and the people is being handled in an unbusinesslike manner.

A splendid suggestion is made by a correspondent in this issue, namely, that lumber manufacturers should devote more attention to educating their employees, and particularly those holding responsible positions, such as filers and sawyers. Everyone in the business knows of the vast amount of lumber that is reduced in value by being improperly sawn-boards which would otherwise be classed as uppers are relegated to the cull pile. The business of saw filing is a science, and to-day where there is one thoroughly competent filer to be found there are a dozen who are not capable of fitting a saw so that it will cut smooth, even lumber under any but the most favorable conditions. They do not strive as they should to master their calling, and in many cases the reason no doubt is that the incentive is lacking. If it should be found practical to establish a system of qualifying examinations, and grant a diploma to all filers and sawyers giving the necessary proof of their competency, it would no doubt encourage them to educate and improve themselves. This is, we think, a matter on which the lumber manufacturers might with profit take some action.

HOO-HOO CONCATENATION AT TORONTO

With all the solemn and fantastic rites of the Concatenated Order of Hoo-Hoo, forty new members to the Toronto branch of this mysterious order were initiated on December 9th, and enabled to partake of its benefits The gathering of gentlemen in Toronto to take advantage of the timber sale was curiously coincident with one of the requirements of the order, namely, that meetings be held on the ninth day of the month. The gentlemen who selected the date of the sale probably did not designate that day for that reason, but Hoo-Hoo, who watches over the fortunes of the Playful Kittens, saw to it that the selection was made for the interest and entertainment of all concerned.

Walter C. Laidlaw, new Snark for Eastern Canada, held his first initiation, and twenty-five Hoo-Hoo and forty purblind kittens played through the Gardens east and west and through the beautiful Onion Bed, and partook of the "On the Roof" together.

Hoo-Hoo, who had been confined in trunk No. 5 for a long time, was very playful. The Onion Bed was particularly fragrant, and tears, not of sorrow but of joy, wet the cheek of the on-looking kittens. Gentlemen who were strangers to each other, groping in the darkness of the Onion Bed, met one another and immediately knew that they had met a friend reaching out something to them, though they could not clearly see what it was.

The "On the Roof" looked like this :

though it would take pages to describe the speeches made, the songs sung, the friendly wit exchanged, and the stories told.

The officers were : W. C. Laidlaw, Snark; J. R. Hooper, Senior Hoo-Hoo; Harlan P. Hubbard, Junior Hoo-Hoo; A. K. McIntosh, Bojum; A. "Lathyarn" Eckert, Scrivenoter; W. J. Hetherington, Jabberwock; W. J. MacBeth, Custocation; G. M. Nickels, Arcanoper; Richard Locke, Gurdon. Daniel Ferguson, of London, assisted the Junior Hoo-Hoo. J. M. Diver, of Sarnia, also assisted. In fact, all the Toronto Hoo-Hoo lent a willing hand in guiding the purblind kittens. Jas. G. Cane occupied with much dignity the post of Official Barber. Many of the features brought out at the Concatenations in Buffalo were used and everybody pronounced it a most successful affair, and, in the opinion of those who had attended other Concatenations, it compared favorably with any.

The Candidates: George "Highball" Belton, London; George "Hemlock" Thompson, Longford Mills; C. "Chatham" Hadley, Chatham; H. J. Bartlett, Orillia; S. "Daddy" Caswell, Orillia; Geo. "Clear" Cormack, Whitby; J. H. Lavallee, Orillia; Wm. H. Tanner, Sturgeon Bay; Alex. "Virgin" Leishmann, Orillia; Wm. "Trade & Commerce" Leak, Toronto; M. P. Kinsella, Peterboro; W. A. Hadley, Chatham; G. M. Tanner, Waubanshene; A. "Professor" Dinnis, Toronto; W. W. Carter, Fesserton; W. L. Rice, Welland; A. G. Seaman, Port Arthur; A. E. Paget, Huntsville; Frank "Hot-Air" Maundrell, Woodstock; Frank Moores, Midland; J. R. McDonald, Toronto; R. B. Elgie, Toronto; E. A. Drake, Walkerville; J. W. Thompson, Toronto; J. W. Elliott, Toronto; Jno. "Irish" Barry, Toronto; J. Q. Adams, Ravensworth; W. J. Ard, South River; A. G. Breed, Toronto; J. H. Smith, Toronto; G. "Sawlog" Kastner, Wiarton; A. E. Clark, Hamilton; H. T. Whaley, Toronto; O. M. Arnold, Bracebridge; A. Mowry, Bracebridge; S. "Spavin" McBride, Toronto; C. E. Paget, Huntsville; G. "Posthole" Farwell, Orillia; A. H. Colwell, Toronto; S. F. Whitham, Brantford.

Those present in addition to the before mentioned were Messrs. W. D. Lummis, Joseph Oliver, A. R. Riches, Hugh Munro, S. R. Higgins, N. V. Kuhlman, P. J. Edwards, W. P. Bull, Toronto; D. L. White, Midland; C. C. Wallace, Bracebridge; G. S. Lay, Buffalo; E. Singer, Guelph.

N. W. Trimble, of Elmstead, Ont., has purchased timber land in New Ontario and purposes moving there next spring to engage in the mill business.

The Gilmour Door Company, Limited, Trenton, Ont., has been incorporated, with a capital of $100,000, to carry on the business of a manufacturer and dealer in lumber, pulp, paper, doors, windows, etc.

THE HOUSE OF HOO-HOO.

The contract for the construction of the House of Hoo-Hoo, or lumbermen's club building, at the St. Louis World's Fair, was signed on Wednesday, November 25, this contract calling for the completion on or before February 1 of the building itself, exclusive of the interior finishing. The type of architecture,

as will be seen by the illustration on page 18, is in the bungalow style, such as would make an ideal country club building, and the construction will be entirely of wood in order to show the various possibilities of the forest products of the United States. In size it will be 132x97 feet, with spacious verandahs extending around the entire structure, a special feature of this verandah being that access will be possible into every room on the main floor by means of large French windows.

The building will contain an office, check room, telephone booths, large rotunda with a magnificent stairway leading to the second floor, and an auditorium with a seating capacity of 400. This auditorium will be beautifully finished in mission style and be used for holding lumber conventions, Hoo-Hoo concatenations and as a banquet hall. There have been provided six luxurious lounging and writing rooms, equipped with every convenience. A commodious reception room with large fire-place, a retiring room, etc., will be especially fitted up for the ladies.

The general style of the building is materially changed from that originally planned and it is generally believed that the change is for the better. In the first place, the construction being entirely of wood, will be much more satisfactory for a lumberman's building. It also contains its main features on the ground floor, which is a decided advantage over the building originally planned. It will be home-like in every detail and will undoubtedly be one of the most attractive features of the great fair.

And one of the fundamental ideas of the whole proposition has not been forgotten. The House of Hoo-Hoo will be a school in which much can be learned of modern methods of wood construction and finishing. The latest idea will be brought out and the world will learn much that it did not know.

"WOOD MANUFACTURED" UNCLASSIFIED.

United States Customs Appraiser Fischer has recently delivered an opinion which is especially interesting as showing that there is no provision in the present tariff law for "wood manufactured," though there is such a provision for "manufactures of wood." This is what a foreigner would perhaps call a "curiosity of the English language."

The "manufactured wood," which was imported by J. G. Sturman, of New York, consists of alderwood boards about ⅛-inch thick, and varying in length from 26 to 39 inches, and in width from 4 to 10 inches. On one side there is an imprint made to imitate the grain of cedar wood, in order to render the same suitable for making cigar boxes. Duty was assessed thereon by the collector, at the rate of 35 per cent. ad valorem, under the provisions of paragraph 208 of the act of July 24, 1897, while the importer claims that the lumber is properly dutiable either at $1, $2, or $3 per 1000 feet, board measure, under paragraph 195, as boards or sawed lumber; or 15 or 20 per cent. ad valorem, under paragraph 198, as sawed boards, not further manufactured than sawed, or a wood unmanufactured, or under paragraph 203 at 30c. per 1,000 shooks, or under section 6, as an unenumerated manufactured article, at 20 per cent. ad valorem.

The board of appraisers holds that the fact that these boards or strips have been printed to represent cedar does not make them manufactures of wood. By reason of that operation, the merchandise was not given a new name, character or use, but still remained wood. The assessment of duty as a manufacture of wood was erroneous.

This being settled, the question to be determined was how should those alder-wood boards be assessed. It appears from the testimony that these boards were cut from the log by a veneering machine. Having been produced in this manner, the merchandise is, therefore, not sawed boards, or boards not further advanced than sawed. It is clearly not veeners, for it does not answer to the commercial or common understanding of that article, nor are they shingles or shooks. There is no provision in the tariff for "wood manufactured." The provisions of paragraph 208 cover only "manufactures of wood," and do not include "wood manufactured." The first cover articles made of wood and the latter would include wood cut into forms which still retain their name, character and use as wood. It seems, therefore, that there is here a class of wood not specially provided for, and the claim in the protest that it is dutiable under section 6 is well founded; but the board holds that, as the merchandise is similar, and, in fact, identical, in material, texture and use, to boards sawed and finished on both sides, it is dutiable under the provisions of paragraph 195, by virtue of section 7, known as the similitude clause. The pertinent provision of paragraph 195 is as follows :

"195. Sawed lumber notspecially provided for in this act, $2 per 1000 feet, board measure; but when lumber of any sort is planed or finished, in addition to the rates herein provided, there shall be levied and paid for each side so planed or finished 50c. per 1,000 feet, board measure."

The summing up of the decision is as follows : Alder-wood boards ⅛ inch thick, and varying from 26 to 39 inches in length, and from 4 to 10 inches in width, having an imprint thereon to imitate the grain of cedar, are not dutiable as manufactures of wood under paragraph 208, act of July 24, 1897, but are dutiable by similitude under paragraph 195. Such wood, being planed or finished on both sides, is dutiable at the rate of $3 per 1000 feet, board measure, under said paragraph 195.

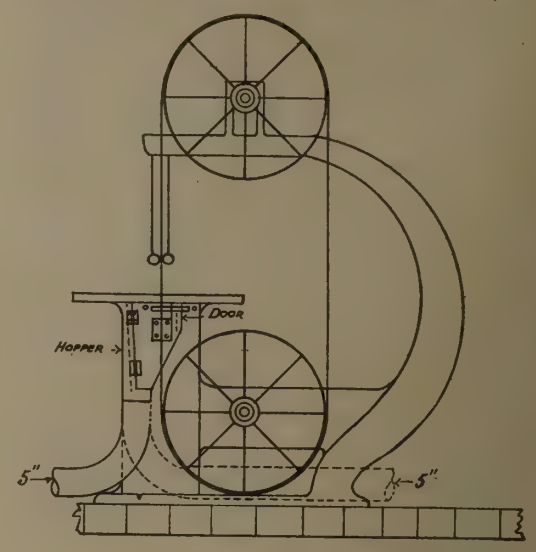
To constitute a manufacture of wood, it is necessary that the wood should have lost its name, character and use as wood, and become a new article, with a new name, character and use.

To become successful a business must be constantly making new acquaintances and when the business is right these acquaintances become friends. There are many and various ways, by which this can be done says the St. Louis Builder, but the best way for a business to make new acquaintances is to advertise. Introduce your business to those who are most liable to be interested in you, let them learn from the face of your advertisement what your good points are, and keep them constantly reminded of them. Don't be afraid that you will be deemed too bold or too forward—these traits are virtues in business, and will make acquaintances for you if you can live up to the good points you claim.

PIPING SAWDUST FROM BAND SAW.

Your correspondent, the Indiana Box Company, wishes to know how to successfully pipe a band saw ; in other words, to know how to get rid of the sawdust. I think the sketch will give the desired information.

In order to convey 95 per cent. of the dust, you should make a sheet iron hopper, with a door in front, to fit to the bottom of saw table, giving no more space in hopper than is necessary to get the guides under the table (that



PIPING SAWDUST FROM BAND SAW.

takes the "flutter" out of the saw). Make the side of hopper next to band wheel on an angle of 30 degrees ; let it angle to, say, 5-inch pipe and have your saw run through a 1-inch slot cut through hopper. If your piping is good and tight, and you have a good suction, you can bet on the results.

Referring to sketch, you can pipe from the hopper in either direction, but I think the one shown by the dotted lines the best, as you can go around the frame of the machine, keeping pipe out of the way. We have several machines piped in this manner, giving first-class results.—Correspondent of The Wood-Worker.

A SAW MILL RECORD.

A Midland, Ont., correspondent writes: "In the J. Playfair sawmill, in Midland, on November 19, was made the fastest thousand lath cut, when one thousand lath were cut in three minutes, twelve seconds, under the management of A. Laidlaw, jun. He also broke the world's record in 1901, cutting 84 thousand lath in 10½ hours, at another mill here."

LUMBER INSURANCE AT REDUCED COST

632 Dexel Building - - PHILADELPHIA, PENNA.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 32 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. IX. TORONTO, CANADA, DECEMBER 30, 1903 No. 48

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING, MONTREAL
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman — A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED

To Correspond with Manufacturers of Hardwood Lumber. with a view of purchasing 1904 Cut.

We also want few cars of Ash and Basswood for immediate shipment.

HURDMAN & ELMITT,
Ottawa, Ont.

FOR SALE.

30 H. P. STATIONARY ENGINE AND Boiler in first class running order, also Combined Lath Mill and Bolter, daily capacity 50 M. Apply Box 93 CANADA LUMBERMAN.

Timber For Sale

3000 White Pine Logs near Cartier Station, C.P.R. main line, with first class piling ground, suitable for Portable Mill. About 5000 White Pine Logs in Booms at mouth of Spanish River, and about 3000 Acres of good Timber, very nearly all White Pine. PINE LUMBER COMPANY Cartier, Ont.

FOR SALE

Timber Berth in Parry Sound District. Area 13 square miles. Estimate eighteen million feet Hemlock, eight million feet Birch, eight million feet Oak, Basswood, Elm and Cedar. Fifteen thousand cords Hemlock Bark, large quantity of Spruce Pulpwood, some scattering Pine. Four miles to barge landing on Lake Nipissing. Apply Box 88, CANADA LUMBERMAN, Toronto.

WANTED—TWO CAR LOADS OF 1" OR 1½" Beech, log run. UNITED FACTORIES, LIMITED, Newmarket, Ont.

WANTED—ONE OR TWO CARS 1¼" DRY Maple, Beech or Birch for factory flooring. LAKING, PATTERSON & Co., Hamilton, Ont.

FROM 20 TO 50 MILLION OF WHITE PINE for Sale in Algoma For particulars address Box 65 CANADA LUMBERMAN.

WANTED—CEDAR POSTS AND 2" AND 3" Tamarac for next winter's delivery. Dry hardwood lumber for immediate shipment. R. E. KINSMAN, Hamilton, Ont.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

WE WANT A GOOD MAN WITH A GOOD Mill, about 20 M capacity or more, with Lath Mill, to contract for three or more seasons' sawing in New Ontario, good mill site provided. Address "Mill Site," care CANADA LUMBERMAN.

FOR SALE.

STEAM SAW AND PLANING MILL, GOOD opening for live man. Mills adjoining railway yard. Address BOX 22 CANADA LUMBERMAN.

WANTED—MACHINERY FOR A STEAM Power Saw Mill, Single Circular or Single Band, Steam Feed, with Lath Mill complete. Must be up-to-date in every particular, either new or almost new. Give full description with price. Address "Complete," care CANADA LUMBERMAN.

TIMBER LIMIT FOR SALE

BERTH NO. 3 SITUATED ON THE SOUTH-WEST corner of the township of Creelman, comprising lots number 7, 8, 9, 10, 11 and 12 in the first, second and third concessions; good location, Vermillion river running through centre. For terms and particulars apply to W. RYAN, North Bay.

MACHINERY FOR SALE

1 Large 4 Sided Sticker; 1 10" Buzz Planer; 2 Improved Mortisers; 1 24" Surface Planer; 1 Cowan Matcher; 1 Band Saw; 1 Shaper; 1 Turning Lathe; 1 Jig Saw Machine; 1 Tenon Machine for doors and windows; 1 Tenon Machine for blinds; 1 Mortiser for blinds; 1 Staple Driver for blinds; 2 Saw Tables. A. H. CUMMINGS & SON, Coaticook, Que.

FOR SALE—TEN SETS OF HEAVY LOG and one set of Tank Sleighs, almost new. Lumber would be taken in payment. A. H EBERT, Wiarton, Ont.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

WANTED—HARDWOOD LUMBER: HARD and Soft Maple, Birch, Soft Elm, Basswood and Brown Ash, for next spring delivery; log run or graded. AUGER & SON, Quebec.

WANTED

Large number of Round Piles, for dock work, in Spruce, Pine, Tamarac or Hemlock, 45 feet long, not less than 16 inches at butt end, and 10 inches at top. Address, RANDOLPH MACDONALD, Contractor, Three Rivers, Que.

AGENCY WANTED

We want exclusive sale of Hardwood Flooring and Spruce Sheathing (in car lots) and Doors for some Quebec or Ontario firm who are not now represented in the Maritime Provinces. Write prices and commissions. Box 113, care CANADA LUMBERMAN.

CURRENT TRADE CONDITIONS.

ONTARIO.

The close of the year finds Ontario lumber in a strong position. Notwithstanding the activity in manufacturing, millmen have been able to dispose of a very large percentage of their cut and are carrying light stocks in their yards. Box lumber, mill culls and dead culls in pine have passed out of manufacturers' hands almost entirely, and it would be difficult to find a large block of any of these grades. The supply of dressing and better, which has sold more slowly during the fall months, is somewhat larger but not above an average stock. An Ottawa valley manufacturer reports that he has sold all his lumber and anticipates higher prices during the coming year. Conditions in the hardwood trade are equally favorable. Earlier in the season it was feared that there might be a large stock of hardwood logs taken out, but later reports show that a conservative policy is being pursued. We look for hardwood prices to continue firm and perhaps advance during the coming spring unless unusually favorable weather should encourage increased logging operations.

The present demand is confined largely to the lower grades of pine lumber and to such hardwoods as are required by implement, furniture, and other consuming factories. There is very little doing in shingles and lath, and prices, if anything, are inclined to be a little easier.

QUEBEC AND NEW BRUNSWICK.

Prices of spruce lumber keep firm, not because of the demand, which is only moderate, but owing to the light supply. It is said that some manufacturers are

curtailing their operations in the woods this winter owing to the expense of logging, and it is predicted that the quantity of logs for next season's sawing will fall short of that of the past season. The weather so far has been favorable for logging, and, especially in New Brunswick, good progress has been made. Forecasts of wintering stocks of spruce deals indicate a reduction as compared with one year ago. There is very little life to the shingle market, extra cedars still ranging from $3.35 to $3.45 on Boston rate of freight.

MANITOBA AND BRITISH COLUMBIA.

From the standpoint of the manufacturer the lumber business of Manitoba and the Territories is not in a very satisfactory condition. Large quantities of low grade stock continue to be shipped in from the mills across the border and sold at cut-rate prices. As the present consumption is not large, this leaves but a small trade for the Canadian mill men. With the turn of the year more activity is expected and prices are likely to become steadier. Winnipeg is looking forward to another good building season next year. In British Columbia the local and export demand is keeping up remarkably well, but eastern shipments are dull. The new timber regulations are commanding a great deal of attention and some modification seems likely.

UNITED STATES.

The lumber trade of the past week has corresponded very closely with what was expected. There has been some buying of small lots, but in no respect has the demand been active. Winter building in the Eastern States is calling for considerable stock, and it is stated that a very light supply is being carried by retail dealers. Attention is now centred upon the balancing up of the year's business and upon the volume of lumber carried by manufacturers and dealers. There is a comparatively heavy stock of shop lumber in the Lake Superior district, but manufacturers are disposed to hold until the prices asked can be realized. No. 1 shop is held at the mills at $40, No. 2 at $31, and No. 3 at $18. The scarcity of box lumber is general, no district reporting a large supply. In the Upper Wisconsin and Minneapolis districts the amount of piece stuff on hand is considered short of the probable spring demand. Norway pine is in light stock and held at firm prices. The general feeling in pine circles is that a steady volume of business at good prices will characterize the coming year. A large consumption of low grade boards is expected, in anticipation of which a number of orders have already been placed. Birch, soft elm and basswood lead among the hardwoods. Thick maple is wanted at Buffalo. In some markets ash is also scarce. The call for hemlock dimension and boards is naturally quiet, but the market is firm and the outlook for the coming year considered bright.

GREAT BRITAIN.

In the British market orders for lumber have dropped to the lowest point of the year. This is due chiefly to the advent of the holidays, and until after the turn of the year business will continue very quiet. Some buying of Canadian pine and spruce is reported, as dealers and consumers are beginning to realize that prices of lumber in stock are low when compared with the prices asked by shippers for next season's supply. Prospects for next year are brighter than they were three months ago. While stocks generally are of an average volume, there is a scarcity of the better grades. A cargo of spruce from Dalhousie, N.B., recently reached Liverpool and was immediately purchased by James Halsall & Son. The price realized has not transpired. The supply of pine deals is concentrated in the hands of a few firms, who are said to have already made their engagements for next season at high prices. This would seem to guarantee the maintenance of present values for some time to come.

White Sea shippers are said to be asking £11 for third quality Archangel redwood deals. Agents have endeavored to close contracts on this basis, but it is reported that few transactions have taken place. Considerable sales to France and Belgium are announced.

STOCKS AND PRICES.

Fully 6,000 men are at work this season in the woods in the Rainy River district.

James Hoey is getting out about 800,000 feet of logs at Prince of Wales, in St. John county, N. B.

Rhodes, Curry & Company, of Amherst, N. S., intend to take out 5,000,000 feet of lumber on their Sheet Harbor property.

The Albion Lumber Company, of Moser River, N, S., expect to take out in the vicinity of 4,000,000 feet of logs this winter.

The United Lumber Company, Halifax, N.S., are taking out about 8,000,000 feet of logs for their Jordan River mills. About 10,000,000 feet will be cut on the St. Mary's property, lately purchased by Alfred Dickie, Lower Stewiacke, N. S.

The John Arbuthnot Company, of Winnipeg, has concluded negotiations for the purchase of the balance of last season's cut of lumber now in A. R. McLennan's yard at Wabigoon, Ont., and the whole of next year's cut of the same firm. The present stock is about 1,250,000 feet, and the 1904 cut will be 4,000,000 feet. Two million feet of logs are already in the water, left over from last season, and two camps are in operation on Long Lake.

There is not as much lumber in stock at Buffalo to begin winter with as there was a year ago, but the trade all round is getting used to shortages, and there is much less difficulty from that direction than there used to be. Common grades of white pine are scarcer than they should be, on account of the great run made by the box factories. The middle grades are somewhat uncertain in price but the holder of them is gaining confidence and will no longer sell them at buyers' prices, as some have done during the fall. High-grade pine is quiet, but firm.

Eastern shingles are about steady at Boston on a basis of $3.35 to $3.45 for extras. The stock of shingles offering is very light at all points, but the feeling is so strong that the market in the spring will open at a higher level that the leading handlers are not inclined to accept any business for February or March delivery at a lower basis than $3.50. Most of the small mills have cleaned up their entire holdings, and will have nothing to offer from now on except winter sawed stock.

During the season of navigation to December 1, there was entered at the custom house at Bay City, Mich., 104,354,596 feet of lumber, and at Saginaw 29,463,183 feet, making a total of 133,817,779 feet, and the 4,000,000 which came in since the first of the month makes the receipts about 138,000,000 feet, compared with 160,000,000 feet last year. There was shipped out during the season by lake only about 3,000,000 feet, compared with 858,000,000 feet during the season of navigation of 1882, showing the wonderful transformation in the lumber business of the Saginaw Valley in a score of years.

Under date of December 5th Messrs. S. P. Musson, Son & Company say of the Barbados market: "The only arrival has been the steamer "Viking," from Tusket Wedge, N.S., with about 40,000 feet of white pine and 156,000 feet of second quality spruce. Nothing has yet been done with the former, but the latter had been contracted for at $20. Most of it, however, consists of 3 and 4 inch boards, which have been rejected and re-sold at $15, any usual second quality being taken at the original price. We have 125,000 feet of white pine coming, and with the 200,000 feet second quality which is also expected, the wants of dealers are fairly provided for, and we rather expect that next arrivals will meet lower prices. No arrival of shingles has taken place since last report. Stocks of Laying Cedar are ample, but Long and Dimension Gaspe are saleable."

BROOM HANDLES.

If an enterprising man with supplies of cheap Spruce, Basswood or Poplar care to put in several machines to work broom handles we can take his output. Write in first instance to Empire, care of CANADA LUMBERMAN.

TRADE OPENINGS.

The following was among the inquiries relating to Canadian trade received at the Canadian Government Office in London during the week ending 18th December, 1903.

An Irish dairy society desires to get into touch with parties in Canada who can supply them with small cut-up boards, suitable for nailing into butter boxes.

The name of the firm may be obtained from the publishers of the CANADA LUMBERMAN.

NEW BRUNSWICK STUMPAGE DUES.

The New Brunswick Government has given notice that pursuant to the new regulations made regarding crown timber lands, the following amounts are hereafter to be collected for stumpage:

On spruce, pine, fir, hacmatac, and cedar logs, per thousand superficial feet	$1 25
Hardwood timber, up to an average of 14 inches square, per ton	1 10
Hardwood timber, above 14 inches, aditional inch, per ton	0 10
Hardwood logs, per M superficial feet	0 80
Pine timber, up to 14 inches, square, per ton	1 25
Pine timber, additional per inch, per ton	0 25
Hacmatac timber, per ton	0 65
Spruce timber, per ton	0 65
Cedar logs, per M superficial feet	1 25
Or per M on the shingles sawed from same, the first three grades each	0 16
Shaved shingles, per M	0 25
Railway ties, ordinary length, each	0 02½
Boom poles, each	0 02
Brackets, each	0 01
Spruce or pine spars, for ships' masts, etc., per lineal foot	0 01
Spruce or pine piling, per lineal foot	0 00¼
Hemlock per M superficial feet, full scale	0 40
Hemlock bark, per cord	0 80
White birch logs, for spool wood, per M superficial feet	0 80

And for all other description of lumber, such as knees, foot hooks, cordwood, etc., etc., fifteen per cent. of the market value thereof at the mill, place of shipment or piace of consumption in the province.

The upset price for mileage on timber licenses will be twenty dollars per square mile, and the renewal mileage on timber licenses will be eight dollars per square mile.

TELEGRAPH POLES WANTED

We buy all lengths. Write us for prices and you will see that by cutting your Cedar into Poles it will net you more than you can get out of it in any other way.

THE HARDWOOD SITUATION.

Some of the wholesale and retail yard men in Chicago say that they are having a brisk inquiry for stock, largely in small lots, as the average consumer does not care to purchase more than sufficient to keep him running from day to day. Large consumers are not buying much, excepting some of those outside of the city who are contracting quite a quantity of stock for delivery in January and February. As a rule, however, buying on any large scale has been postponed until after the first of the year and the wholesale trade is not handling more than can be comfortably supplied from the moderate stocks at hand.

One of the most encouraging features of the situation, says the American Lumberman, is that inquiries are increasing in number for delivery early next year. Several firms in this market have recently remarked on this feature of the situation, which they say promises a contiuously active market after the middle of January. One dealer states that his inquiry for deliveries early in the coming year are about as plentiful as he ever had.

Prices have not shown much of a tendency to sag despite the falling off in demand. Quarter sawed white oak has shown a slight weakness and yet few holders are sacrificing it, as they realize that this is not the season of the year for consumption and are content to hold until the demand naturally rises, which will no doubt take place shortly after the first of the year. Quarter sawed red oak is holding firm. Plain white oak and red oak are both steady and inquiries for future delivery on the increase.

Basswood displays some weakness, but this is no doubt merely owing to the temporary lack of demand. Former consumers of basswood have had their attention largely called to other woods of late and this has caused an apparent plentiful supply of basswood, which really is not the case, as there is scarcely any variety of lumber that is in less supply. Rock elm has lately come to the front and the demand continues unabated, with light supply to draw from. White ash continues a much wanted article in all markets and both mills and assembling points are said to be out of stock.

WANTED

Pine Cutting common and better, 6½ inches long and up, 4 in. and wider, 1½ in. thick and thicker. State quantity and price for yearly supply from saw mills or factories.

FIRES.

The planing mill of D. Atchison & Company, at Hamilton, Ont., was almost totally destroyed by fire last week. The loss is about $20,000, largely covered by insurance.

The dry kiln of the Canada Cabinet Company at Gananoque, Ont., was destroyed by fire on December 26th, at a loss of $8,000. Considerable lumber was also burned.

The Dyment, Butterfield Company, of Barrie, Ont., advise us that the statement in last issue that they had purchased and intended operating a small timber limit near Powassan is not true, as no such purchase has taken place.

THE DULUTH LUMBER CUT.

This year the mills in the Duluth district of Minnesota have cut 885,000,000 feet of pine lumber. This is as great an amount as was ever cut in the district. Of the cut of this year about 500,000,000 feet was shipped to the east by water via Duluth. The rest was distributed by rail to Chicago, the west and the south. Practically the entire cut of mills in the city of Duluth goes east by water, and with it about 100,000,000 feet cut by interior mills. The value of the white pine cut of the district this year is about $17,500,000.

The probabilities are that the cut of the coming year will decrease about twenty-five per cent. Mills go into the winter with small stocks on hand, and with less unsold lumber than they have had in years. On docks in Duluth there are only 110,000,000 feet of all classes of lumber and of this more than half is sold. Interior mills of the district have, perhaps, 250,000,000 feet on sticks in their yards, a great share of which will go forward during the winter.

CANADIAN LUMBER SHIPMENTS.

From Halifax, N.S.: Str. Ionian, for Liverpool, 275,495 ft. spruce deals, value $3,045. Schr. Baden Powell, for Demerara, 23,163 ft. pine boards, value $325. Schr. George R. Alston, for Demerara, 115,000 ft. pine boards, value $2,500. Str. Manchester Commerce, for Manchester, 310,715 ft. spruce deals, value $3,215.

From St. John, N.B.: Str. Bangor Head, for Belfast, 314 pcs. oak timber, 22,592 ft. box shooks, 232,257 ft. deals, 1,403 ft. ends. Schr. William Marshall, for Washington, 1,425,600 laths. Schr. C. B. Flint, for New Bedford, 49,026 ft. spruce boards, 65,663 ft. spruce plank, 125,693 ft. deals, 500,000 cedar shingles. Schr. Romeo, for Boston, 1,387,000 shingles, 20,425 ft. boards. Schr. Luta Price, for Boston, 139,759 ft. boards, deals and planks.

TIMBER LIMIT TRANSACTIONS.

William Armstrong, of Fork River, N. W. T., has purchased a timber limit from Shaw Bros. at Crooked River, 60 miles west of Erwood, on the Canadian Northern Railway.

John C. Kain, of Quebec, has just purchased a small timber limit from Ives Bouillion of Tadousac. The limit consists of 15 square miles and is situated at Bergeron, 15 miles east of Tadousac, on the north shore. The timber is chiefly cedar and spruce. Mr. Kaine intends manufacturing pulp wood.

Current freight rates on lumber from British Columbia points are as follows: Sydney, 27s 6d to 30s; Melbourne or Adelaide, 27s. 6d to 30s; Port Pirie, 26s 3d to 27s 6d; Fremantle, 35s; Shanghai, 33s. 9d to 35s; Kiao-Chau, 35s; Taku, 35s to 37s 6d; Vladivostock, 40s; West Coast S. A., 28s 9d to 32s 6d; South Africa, 45s to 47s 6d; U. K. or Continent, 45s to 47s 6d.

PERSONAL.

Mr. D. J. McLaughlin, a retired lumber merchant, has been elected president of the St. John, N. B., Board of Trade.

Mr. John Shearer, jr., of Ottawa, has been appointed by the Dominion Government to gather material for a Canadian forestry exhibit at the St. Louis Exposition.

Mr. K. F. Robinson, for many years manager of the Eastman Lumber Company at Eastman, Que., has accepted the management of the Cookshire Mills Company, of Cookshire.

Mr. A. E. Munn, late manager of the British Canadian Timber Company at Kearney, Ont., has been appointed manager of the Canada Wood Specialty Company, of Orillia, a position in which his experience should be found of great value.

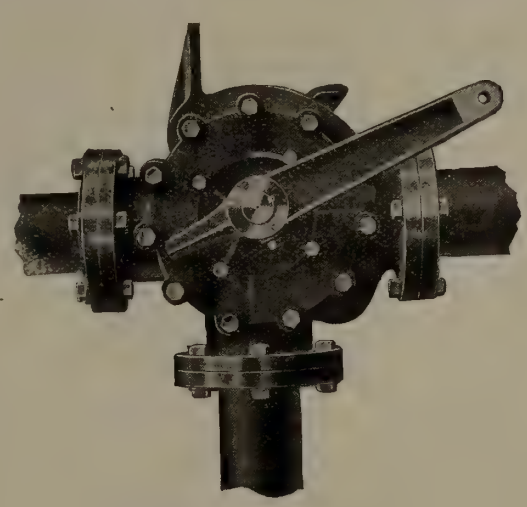
After an illness extending over a period of fifteen months Mr. William Harvey, of Arnprior, passed to his reward last month. Deceased was probably the best known man in the vicinity of Arnprior, having for the past thirty-eight years been superintendent of the lumbering operations of McLachlin Bros. He was engaged by the late Daniel McLachlin in 1865 and remained continuously in charge up to the time of his failing health.

THE CANADA LUMBERMAN was pleased to receive a visit during the past month from Mr. E. H. Heaps, head of the well known firm of E. H. Heaps & Company, Vancouver, B. C. His company manufacture lumber, shingles, door, etc., and their product is well known in Eastern Canada. Mr. Heaps states that the shingle business of the Pacific Coast is getting on a more solid footing and he expects that during the coming year harmony will prevail among the manufacturers. Mr. Heaps has just established an office in Toronto in charge of Mr. Cameron.

R. F. Dorfman, who represents the syndicate which has been buying large areas of timber lands, in the Nanaimo district of British Columbia, states that the probabilities favor the building of a large mill in the immediate vicinity of Nanaimo. It is reported that additional capital is being obtained to work the limits.

HILL ROTARY STEAM FEED VALVES.

Ever since the first shot gun feed was built, the most fruitful source of trouble has been with the valves. The feed itself is a camparatively simple proposition, but the valve has been the rock on which most of the designers have split. Every conceivable form of valve has been tried, the centre and the end, the vertical and the horizontal, but each one had some grave fault that more than balanced its good ones. One would stick, the next would jerk, and all had something that a sawyer wouldn't stand for. The nearest approach to a satisfactory valve has been the rotary, but even these had some undesirable features, and Wm. E. Hill & Company claim that it was not until the valve here illustrated was put on the market that a perfect working valve was found. This valve is the result of experimented tests with every kind of valve. The result is claimed by the makers to be a perfect working valve. Its points of superiority over all other valves are: It is perfectly balanced. It has uniform steam pressure on all parts, avoiding all tendency to bind. The ends are balanced, thus doing away with the end pressure met with in other types of rotary valves. It has large wearing surfaces. It only requires a very small movement of the valve stem lever to open or close, and this together with its rolling motion makes it the easiest working valve yet produced. It is made to fit any size steam, port and exhaust pipes, all connections being made by flanges. It is especially adapted where high steam pressures are used. It gives to the sawyer's lever a steady uniform motion, doing away with all jerking motions so common in other types of valves.



HILL ROTARY STEAM FEED LVE.

The valve stem lever has a pointer which indicates the valves' central position, also its extreme steam and exhaust openings. With each pair of valves is furnished a lever equalizing device, so that the valves will be given just full travel and no more when sawyer's lever is thrown to either extreme.

Anyone who is having trouble with their feed valves will do well to write to the manufacturers, William E. Hill & Company, 415 N. Rose Street, Kalamazoo, Michigan, for circular B, blue prints and prices.

PUBLICATIONS.

Messrs. Baldwin, Tuthill & Bolton, of Grand Rapids, Mich., have issued a valuable catalogue devoted to saw fitting machines and tools, of which they manufacture a very complete line.

Among the holiday reminders which have reached our desk are attractive calenders from the following firms: C. A. Larkin, wholesale lumber, Confederation Life Bldg., Toronto; Keenan Bros., lumber manufacturers and dealers, Owen Sound, Ont.; Alex. Dunbar & Sons, manufacturers wood-working and saw mill machinery, Woodstock, N. B.; Long-Knight Lumber Company, (Incorporated), hardwoods and cypress, Indianapolis, Ind.

20% reduction off tariff rates.

We accept lines ranging from $10,000 to $40,000 on lumber piled 100 ft. or more from mill. Describe conditions and rates will be quoted promptly.

Lumber Underwriters, 66 BROADWAY, NEW YORK

UNIFORM HARDWOOD INSPECTION RULES.

The two committees of the National Hardwood Lumber Association and the Hardwood Manufacturer's Association of the United States who were recently in session in Chicago, reached a basis of agreement as to uniform inspection on December 11th. The revised rules affecting certain kinds of lumber in which Canadians are interested given below :

RULES FOR INSPECTION OF MAPLE, BASSWOOD, BEECH, BIRCH, BLACK ASH, SOFT ELM, ROCK ELM, STRIPS.

GENERAL INSTRUCTIONS.

As the inspection of lumber is so largely a matter of judgment, inspectors inspecting under these rules are instructed to use their best judgment based upon these rules, taking into consideration the general run of the stock as to lengths, widths and manufacture.

Lumber must be inspected and measured as the inspector finds it, of full length and width. He shall make no allowance for the purpose of raising the grade. The inspection must be made from the worst side of the piece except when the reverse side grades two or more grades higher in which case the piece must be graded up one grade from the poor side.

Lumber shall be well manufactured, of good average lengths and widths. It should be sawed plump and even thickness and have parallel edges and square ends. Tapering lumber in standard lengths is measured at the narrow end, except as otherwise specified.

All fractions of three-fourth of a foot or over must be counted up to the next higher figure; all fractions of less than three-fourths of a foot must be counted back to the next lower figure.

All badly missawed lumber must be thrown out by the inspector.

All lumber must be tallied face or surface measure.

Five per cent. of lumber that is 1-16 inch scant of the given thickness to be accepted in any shipment.

The standard grades are firsts, seconds, No. 1 common, No. 2 common, No. 3 common except as otherwise specified.

When firsts and seconds are combined as one grade there must be at least one-third of firsts, except as otherwise specified.

Standard Lengths.—6, 8, 10, 12, 14 and 16 feet, except as otherwise specified. As most timber is handled in lengths of 10, 12, 14 and 16 feet, odd lengths such as 9, 11 and 13 feet, must be measured back to the next even length, except as otherwise specified. In the grade of firsts and seconds the lengths are 8 to 16 feet, but there must be over 10 per cent. of 10 foot lengths and 5 per cent. of 8 foot lengths, except as otherwise specified.

Standard Thicknesses.—3/8, 1/2, 5/8, 3/4, 1, 1 1/4, 1 1/2, 2, 2 1/2, 3 and 4 inch.

Standard Defects.—Each one of the following items constitute a standard defect : (a) One knot one and one-quarter inches in diameter. (b) Two sound knots not exceeding in extent or damage one and one-quarter inch knot. (c) One inch of bright sap, except as otherwise specified. (d) One split not diverging more than one inch to the foot, and not exceeding in length in inches the surface measure of the full in feet, except as otherwise specified. (e) Worm, grub, knot and rafting pin holes, not exceeding in extent or damage one and one-quarter inch knot, except as otherwise specified.

Note :—A straight split not exceeding six inches in length in one end of a piece of lumber eight inches and over wide must not be considered a defect.

Note 2 :—Black spots in maple, rock and soft elm not larger than a standard knot shall be considered no defect.

Explanations of Standard Defects.—The following items are to be given consideration : (a) The term "Sound Cutting," as used in these rules, means a piece of lumber free from rot and heart shake. (b) Ordinary season checks are not to be considered defects, but if of so serious a character as to damage the lumber they are to be considered by the inspector. (c) Black stain, heart shake, rot and dote are serious defects, reducing to a grade lower than firsts and seconds. (d) Wane is difficult to describe and inspectors must take same into consideration. (e) In the following rules all widths and lengths mentioned are inclusive.

SPECIAL INSPECTION.

Log Run.—Log Run means the full run of the log with No. 3 common cut. Common and Better.—Common and better means the full run of the log with No. 2 and No. 3 common out. Common and better must contain at least 50 per cent. of first and seconds.

Merchantable.—Merchantable means the full run of the log with No. 3 common out, and that the No. 1 common and firsts and seconds must be measured full and the No. 2 common one-half.

Inspection for lumber sawed for specific purposes, such as axles, bolsters, tongues, reaches, etc., must be inspected with a view to the adaptability of the piece for its intended use, because in most cases it cannot be used for other purposes.

MAPLE.

Grades—Firsts, seconds, No. 1 common, No. 2 common and No. 3 common. Standard thickness—1, 1 1/4, 1 1/2, 2, 2 1/2, 3 and 4 inch when dry. Bright sap is no defect in any grade.

Firsts.—Widths—6 inch and over. Lengths—10, 12, 14 and 16 feet. 6 and 7 inch must be clear. 8, 9 and 10 inch will admit one standard defect. 11 inch and over will admit two standard defects or their equivalent.

Seconds.—Widths—6 inch and over. Lengths—8, 10, 12, 14 and 16 feet. Pieces 8 feet long, 6 and 7 inch wide, must be clear. Pieces 8 feet long, 8 inch and over wide, will admit one standard defect or its equivalent. Pieces 10 feet or over long, 6 and 7 inch wide, will admit one standard defect. Pieces 10 feet or over long 8 and 9 inch wide, will admit two standard defects or their equivalent. Pieces 10 feet or over long, 10 and 11 inch wide, will admit of three standard defects or their equivalent. Pieces 10 feet or over long, 12 inch or over wide, will admit of four standard defects or their equivalent.

No. 1 Common.—Widths—3 inch and over. Lengths—6, 8, 10, 12, 14 and 16 feet. Pieces 3 or 4 inch wide must have one clear face and two square edges. Pieces 5 inch wide, 6 feet long, will admit one standard defect. Pieces 5 inch wide, 8 feet and over long, will admit two standard defects or their equivalent. Pieces 6 feet long, 6 to 11 inch wide, will admit one standard defect or its equivalent. Pieces 6 feet long, 11 inch and over wide, will admit two standard defects or their equivalent. Pieces 8 or 10 feet long, 6 inch and over wide, must work two-thirds clear in not over two pieces. Pieces 12 feet or over long, 6 inch or over wide, must work two-thirds clear in not over four pieces. No piece of cutting to be considered which is less than 3 feet long and 3 inch wide, or 2 feet long and 6 inch wide.

No. 2 Common.—Widths—3 inch and over. Lengths—6, 8, 10, 12, 14 and 16 feet. Pieces 6, 8 or 10 feet long must work 50% clear in not over three pieces. Pieces 12 feet or over long must work 50% clear in not over pieces. No piece of cutting to be considered which is less than 3 feet long and 3 inch wide, or 2 feet long and 6 inch wide.

No. 3 Common.—Widths—3 inch and over. Lengths—4, 6, 8, 10, 12, 14 and 16 feet. No. 3 common must contain at least 25% of sound cutting.

BASSWOOD.

Grades—Firsts, seconds, No. 1 common, No. 2 common and No. 3 common. Standard thicknesses—1, 1 1/4, 1 1/2, 2, 2 1/2, 3 and 4 inch when dry. Bright sap is no defect in any grade.

Firsts.—Widths—5 inch and over. Lengths—10, 12, 14 and 16 feet. 5, 6 and 7 inch must be clear. 8, 9 and 10 inch will admit one standard defect. 11 inch and over will admit two standard defects or their equivalent.

Seconds.—Widths—5 inch and over ; 5 inch must be clear. Lengths—8, 10, 12, 14 and 16 feet. Pieces 8 feet long, 6 and 7 inch wide, must be clear. Pieces 8 feet long, 8 inch and over wide, will admit of one standard defect or its equivalent. Pieces 10 feet or over long, 6 and 7 inch wide, will admit of one standard defect. Pieces 10 feet or over long, 8 and 9 inch wide, will admit of two standard defects or their equivalent. Pieces 10 feet or over long, 10 to 11 inch wide, will admit of three standard defects or their equivalent. Pieces 10 feet or over long, 12 inch or over wide, will admit of four standard defects or their equivalent.

No. 1 Common.—Widths—5 inch and over. Lengths—6, 8, 10, 12, 14 and 16 feet. Pieces 3 or 4 inch wide must have one face clear and two square edges. Pieces 3 inch wide, 6 feet long, will admit of one standard defect; pieces 5 inch wide, 8 feet and over long, will admit of two standard defects or their equivalent. Pieces 6 feet long, 6 to 11 inch wide, will admit of one standard defect of its equivalent ; pieces 6 feet long, 11 inch and over wide, will admit of two standard defects or their equivalent. Pieces 8 or 10 feet long, 6 inch and over wide, must work two-thirds clear in not over two pieces. Pieces 12 feet or over long, 6 inch and over wide, must work two-thirds clear in not over four pieces. No piece of cutting in this grade considered which is less than 3 feet long and 3 inch wide, or 2 feet long and 6 inch wide.

No. 2 Common.—Widths—3 inch and over. Lengths—6, 8, 10, 12, 14 and 16 feet. Pieces 6, 8 or 10 feet long must work 50 per cent. clear in not over three pieces. Pieces 12 feet or over long must work 50 per cent. clear in not over four pieces. No piece of cutting in this grade considered which is less than 3 feet long and 3 inch wide, or 2 feet long and 6 inch wide.

No. 3 Common.—Widths 3 inch and over. Lengths—4, 6, 8, 10, 12, 14 and 16 feet. No. 3 common must contain at least 25 pes cent. of sound cutting.

Beech, Birch and Black Ash.

Grades—Firsts, seconds, No. 1 common, No. 2 common and No. 3 common. Standard thicknesses—1, 1 1/4, 1 1/2, 2, 2 1/2, 3 and 4 inch when dry. Bright sap is no defect in any grade.

Firsts.—Widths—6 inch and over. Lengths—10, 12, 14 and 16 feet. 6 and 7 inch must be clear. 8, 9 and 10 inch will admit one standard defect. 11 inch and over will admit two standard defects or their equivalent.

Seconds.—Widths—6 inch and over. Lengths—8, 10, 12, 14 and 16 feet. Pieces 8 feet long, 6 and 7 inch wide, must be clear. Pieces 8 feet long, 8 inch and over wide, will admit of one standard defect or its equivalent. Pieces 10 feet or over long, 6 and 7 inch wide, will admit of one standard defect. Pieces 10 feet or over long, 8 or 9 inch wide, will admit of two standard defects or their equivalent. Pieces 10 feet or over long, 10 or 11 inch wide, will admit of three standard defects or their equivalent. Pieces 10 feet or or over long, 12 inch or over wide, will admit of four standard defects or their equivalent.

No. 1 Common.—Widths—3 in. and over. Lengths—6, 8, 10, 12, 14 and 16 feet. Pieces 3 or 4 inch wide must have one face clear and two square edges. Pieces 5 in. wide, 6 feet long, will admit of one standard defect ; pieces 5 inch wide, 8 feet and over long, will admit of two standard defects or their equivalent. Pieces 6 feet long, 6 to 11 inch wide, will admit of one standard defect or its equivalent ; pieces 6 feet long, 11 inch and over wide, will admit of two standard defects or their equivalent. Pieces 8 or 10 feet long, 6 inch and over wide, must work two-thirds clear in not over two pieces. Pieces 12 feet or over long, 6 inch or over wide, must work two-thirds clear in not over four pieces. No piece of cutting in this grade considered which is less than 3 feet long and 3 inches wide, or 2 feet long and 6 inches wide.

No. 2 Common.—Widths—3 inch and over. Lengths—6, 8, 10, 12, 14 and 16 feet. Pieces 6, 8 or 10 feet long must work 50 per cent. clear in not over three pieces. Pieces 12 feet or over long must work 50 per cent. clear in not over four pieces. No piece of cutting in this grade considered which is less than 3 feet long and 3 inch wide, or 2 feet long and 6 inch wide.

No. 3 Common.—Widths—3 inch and over. Lengths—4, 6, 8, 10, 12, 14 and 16 feet. No. 3 common must contain at least 25 per cent. of sound cutting.

Soft Elm.

Grades—Firsts, seconds, No. 1 common, No. 2 common and No. 3 common. Standard thicknesses—1, 1 1/4, 1 1/2. 2, 2 1/2, 3 and 4 inch when dry. Bright sap is no defect in any grade.

Firsts.—Widths—6 inch and over. Lengths—10, 12, 14 and 16 feet. 6 and 7 inch must be clear. 8, 9 and 10 inch will admit one standard defect. 11 inch and over will admit two standard defects or their equivalent.

Seconds.—Widths—6 inch and over. Lengths—8, 10, 12, 14 and 16 feet. Pieces 8 feet long, 6 and 7 inch wide, must be clear. Pieces 8 feet long, 8 inch and over wide, will admit of one standard defect or its equivalent. Pieces 10 feet or over long, 6 and 7 inch wide, will admit of one standard defect. Pieces 10 feet or over long, 8 and 9 inch wide will admit of two standard defects or their equivalent. Pieces 10 feet or or over long, 10 and 11 inches wide, will admit of three standard defects or their equivalent. Pieces 10 feet or over long, 12 inch or over wide, will admit of four standard defects or their equivalent.

No. 1 Common.—Widths—3 inch and over. Lengths—6, 8, 10, 12, 14 and 16 feet. Pieces 3 and 4 inch wide must have one face clear and two square edges. Pieces 5 inch wide, 6 feet long, will admit of one standard defect. Pieces 5 inch wide, 8 feet long, will admit of two standard defects or their equivalent. Pieces 6 feet long, 6 to 11 inch wide, will admit of one standard defect or its equivalent. Pieces 6 feet long, 11 inch and over wide, will admit of two standard defects or their equivalent. Pieces 8 and 10 feet long, 6 inches and over wide, must work two-thirds clear in not over two pieces. Pieces 12 feet or over long, 6 inch or over wide, must work two-thirds clear in not over

four pieces. No piece of cutting to be considered which is less than 3 feet long and 3 inch wide, or 2 feet long and 6 inch wide.

No. 2 COMMON.—Widths—3 inch and over. Lengths—6, 8, 10, 12, 14 and 16 feet. Pieces 6, 8, or 10 feet long must work 50 per cent. sound cutting in not over three pieces. Pieces 12 feet long must work 50 per cent. sound cutting in not over four pieces. No piece of cutting to be considered which is less than 3 feet long and 3 inches wide or 2 feet long and 5 inches wide.

No. 3 COMMON.—Widths—3 inch and over. Lengths—4, 6, 8, 10, 12, 14 and 16 feet. No. 3 common must contain at least 25% of sound cutting.

ROCK ELM.

Grades—Firsts, seconds, No. 1 common, No. 2 common and No. 3 common. Standard thicknesses—1, 1¼, 1½, 2, 2½, 3 and 4 inch when dry. Bright sap is no defect in any grade.

FIRSTS.—Widths—6 inch and over. Lengths—10, 12, 14 and 16 feet. 6 and 7 inch must be clear. 8, 9 and 10 inch will admit of one standard defect. 11 inch and over will admit of two standard defects or their equivalent.

SECONDS.—Widths—6 inch and over. Lengths—8, 10, 12, 14 and 16 feet. Pieces 8 feet long, 6 and 7 inch wide, must be clear. Pieces 8 feet long, 8 inch and over wide, will admit one standard defect or its equivalent. Pieces 10 feet long, 6 and 7 inch wide, will admit of one standard defect. Pieces 10 feet long, or longer, 8 and 9 inch wide, will admit of two standard defects or their equivalent. Pieces 10 feet or over long, 10 and 11 inch wide, will admit of three standard defects or their equivalent. Pieces 10 feet or over long, 12 inch or over wide, will admit of four standard defects or their equivalent.

No. 1 COMMON.—Widths—3 inch and over. Lengths 6, 8, 10, 12, 14 and 16 feet. Pieces 3 or 4 inch wide must have one face clear and two square edges. Pieces 5 inch wide, 6 feet and over long, will admit of one standard defect. Pieces 5 inch wide, 8 feet and over long, will admit of two standard defects or their equivalents. Pieces 6 feet long, 6 to 11 inch wide, will admit of one standard defect or its equivalent. Pieces 6 feet long, 11 inch and over wide, will admit of two standard defects or their equivalent. Pieces 8 or 10 feet long, 6 inch and over wide, must work two-thirds clear in not over two pieces. Pieces 12 feet or over long, 6 inch or over wide, must work two-thirds clear in not over four pieces. No piece of cutting to be considered which is less than 3 feet long and 3 inch wide, or 2 feet long and 6 inch wide.

No. 2 COMMON.—Widths—3 inch and over. Lengths—6, 8, 10, 12, 14 and 16 feet. Pieces 6, 8 or 10 feet long must work 50% sound cutting in not over three pieces. Pieces 12 feet or over long must work 50% sound cutting in not over four pieces. No piece of cutting to be considered which is less than 3 feet long and 3 inch wide, or 2 feet long and 6 inch wide.

No. 3 COMMON.—Widths—3 inch and over. Lengths—4, 6, 8, 10, 12, 14 and 16 feet. No 3 common must contain at least 25% of sound cutting.

STRIPS.

Widths—3, 4, 5, or 6 inch. Lengths—6, 8. 10, 12, 14 and 16 feet. Grades—Clear, No. 1 common and No. 2 common.

CLEAR.—Clear strips must be 10 to 16 feet long and show one face clear and two good edges.

No. 1. COMMON.—No. 1 common strips must be 8 to 16 feet long and not to exceed 20% shorter than 12 feet, and may have one standard defect showing on both faces.

No. 2 COMMON.—No. 2 common strips must be 6 feet or over long, and must work one-half clear in not more than three pieces. No piece of cutting should be less than 2 feet in length.

STEP PLANK.—Grades—First and second and common. Widths—11 to 15 inch. Thicknesses—1¼, 1½ and 2 inch. Lengths—10 to 16 feet. Firsts and seconds must be clear one face and one edge. The reverse side and one edge must be sound. Firsts and seconds may have a split not exceeding 12" in length. Common includes all lumber below the grade of firsts and seconds that will work two-thirds of the length clear; no cutting to be less than 4 feet long by the full width of the piece.

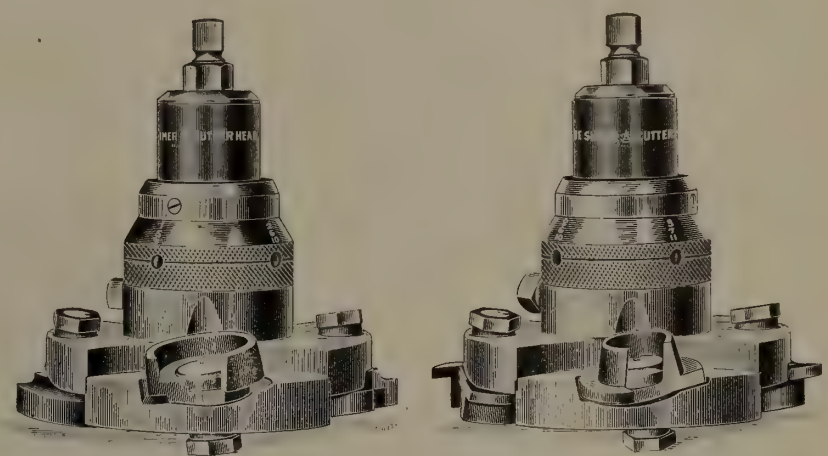
The Shimer Cutter Heads

WITH EXPANSION



Are built from forgings of Steel and finished throughout in the solid metal. This insures accuracy, durability and perfect mechanical adjustments.

They are appreciated by the user because they hold up under the severest tests. They cut easily all kinds of hard, knotty and cross-grained lumber. If you make single tongue and groove Flooring, Ceiling and Wainscoting, buy THE SHIMER CUTTER HEADS and you will have no disappointment. Address

TO THE TRADE

I confine myself exclusively to the manufacture of this line of goods, having an up-to-date tannery, also years of experience myself. I am prepared to fill all orders promptly and guarantee to give satisfaction at lowest possible prices.

WM. A. HOLT, ST. ANDREWS, N. B.

REVISION OF NEW BRUNSWICK TIMBER LAWS.

Two important changes have been made in the laws to which all purcharers of timber from the New Brunswick Government must submit. The stumpage dues have been increased from $1 to $1.25 per thousand feet and the charge for renewal of leases has been increased to $8 per square mile, as compared with $4 in the past. The views of the Government on the various matters affecting the lumber industry are set forth in the reply of Hon. A. T. Dunn, Surveyor General, to the memorial presented by the New Brunswick Lumbermen and Limit Holders Association, which we print below:

THE SURVEYOR-GENERAL'S REPLY.

To Messrs. Henry Hilyard, Kilgour Shives, W. B. Snowball, John E. Moore, G. G. King, E. Hutchinson and R. A. Lawlor, Committee of The Lumbermen and Limit Holders' Association:

GENTLEMEN,—I am directed to inform you that I submitted to the Executive Council your memorial of the 29th September last, and to say that the matters therein referred to have received very careful consideration.

As you have made recommendations in reference to the administration of the crown lands which are very important, it will perhaps be well to refer to them in detail, and to acquaint you with the views of the government in respect thereto under the different headings.

1. The question of allowing tops to be removed without payment of stumpage is one involving serious difficulties, and, after consultation with the officers of the department, who are fully competent to judge upon these matters, the Executive Council has reluctantly been forced to the conclusion that it cannot accede to your views. You will remember that this matter was brought up before the Department of Crown Lands some years ago and the Surveyor General endeavored to meet the views of the lumbermen in this regard, but finding that advantage was taken throughout the different sections of the province, by certain operators who claimed that a large percentage of their cut was on tops alone and therefore should not be liable to stumpage, it became necessary to adopt a different policy, and for this and other reasons it is not considered advisable in the public interest that the present policy in this regard should be departed from.

2. While the Executive Council is impressed with the view put forward in the second paragraph of your memorial, with reference to the increased cost attending the procuring of lumber and getting it to market yet it should be borne in mind that the province has in recent years expended large amounts of money in the building of railways, which have very considerably lessened the cost of taking the supplies to the head waters of the rivers where lumbering operations are carried on, and this fact, as well as the reduced cost of supplies, should be taken into consideration in determining what would be a fair rate of stumpage.

It must also be borne in mind that since the adoption by the government of the policy of granting the licensees for twenty-five years, the value of the holdings of licensees has increased enormously. Many licensees who purchased at the upset price of $8 per square mile, now hold their lands at $100 and upwards; and while it may be true that the cost of procuring the lumber has increased, owing to the higher rate of wages now prevalling, it is within the knowledge of the executive that the price of lumber in the local markets has very laregly increased, and is in many cases nearly fifty per cent. higher than it was ten years ago. These facts cannot be ignored by the government as trustees of the public in determining this question.

3. The question of having different rates of stumpage in different sections of the province is a very important one, and the Executive Council has felt that a great deal could be said in favor of discriminating in this regard, having reference to the accessibility to markets, the facilities for procuring lumber, difference in freights and other circumstances, but it has been decided to acquiesce in the views put forward by you on behalf of the lumbermen and continue the uniform rate throughout the province.

4. In respect to recommendation No. 4 contained in your memorial, the Executive Council feels that it would not be in the interest of the province that a regulation of general effect should be made regarding the reduction of stumpage to operators cutting on burnt districts, but has decided that in cases of this kind application must be made to the Surveyor General, and by him referred to the Committee of Council for decision, and each case will be dealt with upon its merits; but the general opinion is that only in very exceptional cases should any reduction be made.

5. In regard to your recommendation No. 5 the Executive Council recognizes that there are throughout the province certain areas under license upon which the timber is not likely at any time, when cut, to become what would be termed merchantable; but the same remarks as made in reference to No. 4 must apply in these cases, namely, each case must be the subject of special application and receive the sanction of the executive, upon report of an officer of the Crown land department.

6. With regard to the recommendation contained in paragraph 6 of the memorial, the Executive Council has decided that new regulations shall be made for the better protection of the forests from fire, and that ample means will be employed to protect the timber lands throughout the province.

7. The recommendation contained in paragraph 7, that all persons going into the woods during the dry season shall first have to secure a license from some person duly authorized for that purpose, would be difficult of enforcement, but the Executive Council will carefully consider as to what can be done in this particular.

8. The Executive Council has given full consideration to the comparative statement of the scales and rates of stumpage in the provinces of New Brunswick, Quebec and Ontario, and likewise the amount paid for renewals. The Executive Council is, however, of the opinion that the scales and rates of stumpage and renewal charges in the provinces of Quebec and Ontario do not afford a safe guide upon which the government could act in the discharge of its duty to the people of this province. The charges to be made for the public property must be based upon the conditions existing in New Brunswick, and it is the duty of the Executive to impose such rates as the state of the lumber business from time to time will reasonably warrant. After the very fullest and most careful consideration the Executive Council has determined that a fair rate to now impose would be, for renewal licenses the sum of $8 per square mile, and that the stumpage rate should be $1.25 per thousand upon spruce, pine, fir and cedar, and a proportionate rate on other lumber.

The above rate of stumpage will be exacted upon the cut of the present season, and the increased mileage charge on renewal licenses will be enforced on all future renewals. Regulations will be made to carry this decision into effect, and any legislation which may be deemed necessary by the Executive to bring the proposed changes into operation will be submitted to the legislative assembly for enactment.

9. With reference to the suggestion of your committee contained in paragraph 9 of the memorial that in case it is the intention of the government to raise the stumpage, the term of the present leases should be extended for a period of twenty-five years from the date of the increased stumpage, the Executive Council would call your attention to the fact that at the time the policy of granting long leases was determined upon, it was clearly understood by the lumbermen that the right was reserved to the government at any time increase the stumpage and also the mileage rate; and in view of this fact, the government does not think it desirable that the question of granting a further extension should form an element in considering the amount of stumpage and mileage rate to be paid.

10. Referring to paragraph 10 of the memorial; while the Executive Council recognizes to the fullest extent the great desirability of preserving from encroachment of trespassers the licensed crown timber lands of the province, yet it cannot accede to the proposition which is suggested in the tenth paragraph that the vacant lands of this province should simply, because they are under license, not be opened for settlement. The policy of the government is, that wherever suitable lands for settlement are available throughout the province, the fullest opportunity should be given to bona fide aplicants to settle upon such lands. The department, however, will be careful in the future, as in the past, to scrutinize all applications in order to determine that they are bona fide, and will only approve of applications that are made in districts where the land is suitable for agricultural purposes and for settlement.

11. As to the statement in paragraph 11 of your memorial, the government intends to introduce an amendment to the act relating to the survey and explortation of timber, so as to meet the difficulties suggested in this paragraph.

12. The suggestion made in paragraph 12 of the memorial merits favorable consideration, and it is the intention of the government, as far as possible, to have base lines run over all the crown lands, so that the evil complained of may be remedied.

13. With regard to the suggestion contained in the thirteenth paragtaph of the memorial, the government is unable to see its way clear to make any general regulation allowing for the cut of logs ot a smaller size than that already provided for.

In conclusion, the Executive Couucil desires me to say that the preservation and protection of the crown timber lands of the province have been the subject of the very gravest consideration by the government, recognizing, as it does, the great importance to the province of preserving and encouraging this great industry. The Executive Council is fully aware that the policy which was adopted in 1893 of granting long leases has been an important factor in this direction, having given an incentive which did not previously exist to the licensees to take all possible means to protect their holdings. The question of whether or not it is desirable to still further extend the terms of the licensees, thereby ensuring greater permanency ot tenure, is one of great importance and will receive the most careful attention.

In this connection, it may be proper to observe that the Executive Council recognizes the equitable claims of those who have invested large amounts of money in the erection of mills, the building ot booms, wharves, etc., in connection with the carrying on of lumbering and milling operations, to hold lands for the purpose of supplying their mills. Upon the other hand, your committee will readily recognize the objections which may be urged and which would naturally have weight with the people of the province against permanently locking up its timber lands without first affording an opportunity to all persons to acquire an interest therein, if they saw fit to do so.

In considering this question, it must be approached from the standpoint ot the public interest, and also with a view to protecting the large number of persons throughout the province who are engaged in this industry. The government recognizes the great importance of speedily arriving at a proper conclusion, and your committee may reply upon the subject receiving the fullest consideration. I have the honor to be, gentlemen,

Your obedient servant,

A. T. DUNN,

Surveyor-General.

Fredericton, N. B., Dec. 4, 1903.

RUNNING SLACK BELTS.

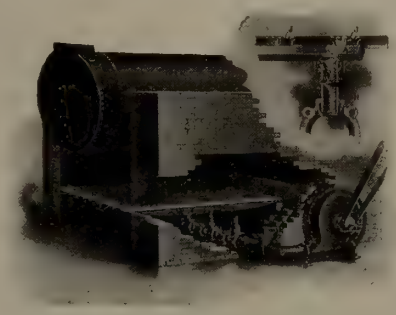
The practice of running slack belts is a habit indulged in more or less by so-called "wise ones," who also use considerable belt dressing, filling, etc., of various kinds. Now this practice is all right, if not carried too far ; and as for belt dressing, a little goes a good way if properly used.

One cause of trouble with slipping belts may be a lack of width. Why not have the belt wide enough to carry the load? Why try to make a 16-inch belt do the work which an 18 or 20-inch belt should do? Would anyone believe that an engineer would allow his engine belt to get so slack that it would jump on the pulley and knock out the side of a brick wall?

This assertion seems a bit doubtful, but it is nevertheless true. It was a 36-inch belt and ran up through the floor to a pulley which was hung as close to the brick wall as possible ; in fact, half the thickness of the wall had been removed so the face of the pulley ran inside the wall line. That left a ledge of brick about 4 or 5 inches from the belt. The belt began to slip, and the dressing was piled on to make it pull. It got so slack that one day, when an unusually heavy load was on, it began to run in waves and jump on the upper pulley. After keeping this up awhile, it finally made one superhuman effort and succeeded in knocking a dozen or more bricks out of the wall. That night when the engine stopped, the belt was examined and found to be badly battered up. Three laps had started at the corners, and the edge, for almost the entire distance around, was open from 2 to 4 inches, and curled up. Seven inches was taken out, the edges cemented well, and there was no more trouble. It is needless to add that a saving of belt dressing was noticed at once.—"J. H. L." in The Wood-Worker.

DRAFT : NATURAL AND FORCED.

Broadly speaking, combustion is the union of the carbon of the fuel with the oxygen of the air. Air is as essential to it as fuel. When the air passes through the fire it loses its oxygen, just as the fuel loses its carbon; and the deoxidized air is as useless as the ashes. It is therefore as necessary to renew the supply of air as to provide more fuel. This renewal of the air is accomplished by the operation of three natural



GORDON HOLLOW BLAST GRATE.

laws—first, the law that heat expands, which, by causing the same weight of air to increase in volume, causes it to become lighter, volume for volume, than it was before; second, by the law of gravitation, which impels the colder and consequently denser and heavier air outside of the furnace to flow in, exactly as water poured into a vessel containing oil settles to the bottom; and third by the law of impenetrability, which decrees that two bodies cannot occupy the same place at the same time, and therefore causes the heated air to rise as the cold air flows under it, just as the oil rises when the water settles. Thus we have accounted for the ascending movement of the heated air and products of combustion up the stack.

It is obivious that the greater the difference in temperature between the heated air and the colder, denser and heavier air outside, the more pronounced the inflowing of the colder air, because the greater the difference in weight. This difference can, of course, be increased either by making the heated air hotter or by making the colder air colder.

There is another way in which the difference in pressure between the deoxidized air above the grate and the fresh air below can be increased, viz., by forcing the fresh air in, as by means of a rotary blower. It is thus that the Gordon Hollow Blast Grate produces its wonderful results. To the pressure exerted by the colder air by its superior weight, it adds the pressure imparted by the blades of a fan travelling approximately ten thousand feet per minute. The pressure obtained by the union of these two forces—weight and the momentum resulting from centrifugal force—is such as to produce a draft sufficient for the rapid combustion of wet or green sawdust, even when there is mixed with it a liberal percentage of ice and snow. Moreover, the hotter fire the grate produces thus, mechanically, the hotter and therefore lighter does the air above the grate become, and, therefore, the more readily the heated air is forced up the stack. In other words, the grate both increases the pressure from below and decreases the resistance above, the result being a vastly improved draft.

There is also another decided advantage that the Gordon Hollow Blast Grate has. One of the difficulties incident to burning wet or green sawdust is its tendency to settle down so compactly as to make it hard for the air to penetrate it. Now, the Gordon Hollow Blast Grate places at the disposal of the fireman a current of air under sufficient pressure to force a passage and keep the sawdust loose, thus giving the natural draft as well as the blast a chance. The exact amount of this pressure may be regulated to a nicety by a gate provided for that purpose.

Again, with the Gordon Hollow Blast Grate the air is compressed by the action of the blower, and being compressed, it contains more oxygen, volume for volume, than air in its natural state, thus promoting combustion in the same manner that, other things being equal, the fuel containing the most carbon and other combustibles will develop the most heat.

Finally, the blast causes the sawdust to dry more quickly, thus making it easier to burn.

The foregoing explanation of the nature of the draft shows why the mere fact that the stack is of sufficient capacity does not indicate that the Gordon Hollow Blast Grate would be superfluous. A large stack merely affords facilities for a strong draft, by giving the heated air and products of combustion ample room to escape without resistance; the Gordon Hollow Blast Grate produces a strong draft, by forcing the air in under pressure and making a hotter fire. It also reveals why the Gordon Hollow Blast Grate is superior to an oven, which, while possessing several excellent advantages, does not increase the draft mechanically.

The manufacturers are the Gordon Hollow Blast Grate Company, of Greenville, Michigan.

EDUCATION OF FILERS.

LOCHLIN, Nov. 30th, 1903,

Editor CANADA LUMBERMAN :

DEAR SIR,—I have been employed for a long time in the manufacture of lumber and I feel that a great saving of timber and time could be obtained in the majority of mills, particularly in the smaller mills of 25,000 feet per day and under, by the mill owners doing more in the way of educating their mill filers, as this is where the principal part of the work is when the machinery is not at fault. More disputes arise among lumber inspectors from good timber being badly sawn than from any other defect. It is well known to the trade that at least 25 per cent. of the culls is due to bad sawing. This question should be more thoroughly considered by the mill owners.

I would say that this could be remedied by having an examination for mill filers, and those who passed should be furnished with a diploma. This would make the filer take more interest in educating himself for the work and it would place the mill owner in a position to have more confidence in the filer, and this would, no doubt, result in better equipped filing rooms and better made lumber.

It is generally thought that saw filing is nothing more or less than a little practice to steady the nerves for the work, but this is a great mistake, as there is nothing connected with the lumber business which requires more careful study than the circular or band saw. The time has already come when timber saving should be carefully studied, and I think something in the way I have suggested would be of great benefit to the general manufacturing of lumber.

Yours truly,

T. A. MCALLISTER.

The next annual meeting of the Hardwood Manufacturers' Association of the United States takes place at the Grand Hotel, Cincinnati, Ohio, January 26th and 27th, 1904.

WOOD PULP DEPARTMENT

IMITATION SILK FROM WOOD.

John E. Kehl, United States consul at Strettin, Germany, writes as follows under a recent date :

I have to-day seen samples of imitation silk for weaving purposes manufacturd from wood. It is an English patent granted to C. H. Stearn, 47 Victoria street, Westminster, London. The rights for the United States, Germany and France have been sold. Prince Henckel-Donnersmarck has purchased the German rights and has just completed the erection of a plant at Sydowsaue, about 5 miles from Strettin. My informant says that the plant is at presen turning out 50 pounds of skien silk per day, which can be increased to a daily output of 2,000 pounds. The sample shown me was very soft and of a cream color. Each thread is made up of eighteen single strands. A single strand is hardly perceptible to the naked eye. As to the relative strength of a real silk thread and this imitation, the real silk is two-thirds stronger. It is said to take coloring or dyeing readily, and when woven into pieces has the apperance of real silk. Wood silk seems to have a great demand. I was told that within the last ten days the price jumped from 19s. to 28s. ($3.86 to $6.81) per pound. How this new artificial article compares with the genuine, in the way of wear and price, I am unable to say. It is impossible to get samples here, or information as to the process of manufacturing, excepting that no particular kind of wood is required and that the pulp undergoes a chemical process and is pressed through very fine tubes by hydraulic pressure, forming the single strands which go to make up thread."

THE COUNTERVAILING DUTY AGAIN.

The last of the series of wood pulp hearings before the Board of United States General Appraisers took place on December 10th. This hearing was the latest in a series of four which have aroused considerable interest. The question at issue is whether the U. S. Government shall charge an extra duty on wood pulp imported from Canada. The previous cases had to do with importations from Quebec, Ontario and Nova Scotia. The present case concerns importations from New Brunswick. The companies interested are the Dominion Pulp Company, of Chatham, and the St. John Sulphite Pulp Company and Cushing Sulphite Fibre Company, of St. John, N. B. According to the testimony, they use in their pulp mills only wood cut in New Brunswick.

The protests are against the imposition by the United States Government of an extra tax of 25 cents per ton on ground wood brought into that country when the pulp wood from which it was made was cut on Crown lands. The reason for levying this extra duty is because Quebec province allows a rebate of 25 cents per cord from the stumpage tax when the wood cut on Crown lands is ground into pulp in Canada. The authority for the imposition of this countervailing duty is found in a proviso of paragraph 393 of the tariff act of 1897, which reads : "Provided, that if any country or dependency shall impose an export duty on pulp wood exported to the United States, the amount of such export duty shall be added to the duties herein imposed upon wood pulp imported from such country or dependency." From this it is seen that the United States Government considers the rebate on the stumpage tax as equivalent to an export duty.

M. F. Mooney, manager of the St. John Sulphite Pulp Company, E. R. Vickery, manager of the Dominion Pulp Company, and H. W. Schofield, secretary-treasurer of the Cushing Sulphite Fibre Company, testified that no export duty was charged on wood from New Brunswick. It was admitted that some of the wood handled in the mills was cut from Crown lands. The main defence, however, was based upon two letters, one over the signature of the Attorney-General of New Brunswick, and the other over that of Albert T. Dunn, Surveyor-General of the province. These two letters both stated that no export duty was charged on wood exported from New Brunswick.

The New Brunswick case is very similar to the Nova Scotia case, which was decided in favor of the importers.

IS ROSSED WOOD DUTIABLE?

Argument is being heard in New York in the protests against the imposition by the United States Government of a duty of 35 per cent. ad valorem on importations of rossed wood. The protesting companies ask for the refund of the duties paid by them for the short period in which the tax was collected. It will be recalled that last May the collectors of customs along the Canadian border were instructed by the Treasury Department to collect 35 per cent. ad valorem on the rossed pulp wood entered at their respective ports. Within ten days or so this order was withdrawn pending investigations.

The contention of the Government and the timber land owners is in briet that rossed pulp wood is really a manufactured article and for that reason should not continue to enjoy free entry as it has done since the rossing process by machinery was introduced. Counsel for the protesting companies, on the other hand, contend that the free entry of rossed pulp wood should be continued, as the removal of the bark from the logs does not change the "name, character and use" of the article. They rely somewhat on a decision of the United States Supreme Court, which laid down the rule that the duty on an article could not be changed unless in the manipulation ot the article its name, character and use were changed. The fact that the bark has been taken off the logs does not make of them manufactured articles, so the protesters claim. A paragraph of the Tariff Act of 1897 provides for free entry of "logs and round unmanufactured timber, including pulp woods," etc. Under this paragraph pulp wood of all kinds has been going in free of duty.

The importance of the affair resides in the fact that if purchasers of pulp wood in Canada find it necessary to ross the wood before taking it into the States, the cost of their product will be increased if the duty be imposed, by one-third the original cost of the wood. Naturally this would mean a very material increase in the price of paper. As between rossing the wood in Canada and performing that operation after the wood has been taken into the States, however, there seems to be no great advantage, excepting possibly a saving in freight, as there is probably little difference in the cost of the operation, whether it be performed in Canada or in the United States.

Some very nice points of law were brought up by counsel on either side, as, for example, that rossed wood was an article unknown when the present tariff law was enacted, and therefore is a new article of manufacture. The controversy depends upon the question whether the operation of rossing is one of manufacture; in other words, whether the name, nature or use of the article has been changed. The decision of the appraisers will be awaited with a great deal of interest.

PULP NOTES.

The British Wood Pulp Association have decided to put into the standard contract the following clause : "All duties, if any, levied on wood pulp sold under this contract to be payable by the purchaser."

The new pulp mill of the Chicoutimi Pulp Company at Chicoutimi, Que., was dedicated on November 28th. The mill is 300x100 feet, with an annex 80x60 feet. It is said that the entire production until 1908 has been sold to a Manchester firm.

The shareholders of the Labrador Electric and Pulp Company, Limited, have elected a new board of directors; as follows : President, E. D. de Varenennes, Waterloo ; vice-president, Ed. Warren, Malbaie ; Rudolphe Forget, P. Laferriere, and S. P. Stearns.

During the eleven months ended November 30th last mechanical wood pulp was imported into Great Britain to the extent of 298,106 tons,and chemical 202,366 tons, and during the corresponding period of last year the imports of mechanical were 292,854 tons and chemical 177,028 tons.

At a recent meeting of the directors of the Brompton Pulp and Paper Company, of Brompton Falls, Que., arrangements were completed for the erection of a large paper mill next spring, to consist of four machines of the largest and most modern type. The pulp mill of the company was completed last summer.

Reporting upon the wood pulp market in France, A. L. Grondal, of Paris, states that the upward tendency of prices for chemical is well maintained, and there are no stocks on hand to speak of. Mechanical is firmer, although there is no great activity ; producers refuse offers at lower prices than quoted, and consumers show a disposition to await further events, even if they have to pay higher prices later on.

J. R. Booth, of Ottawa, evidently intends to manufacture pulp on a large scale at his new mill at the Chaudiere, opposite his saw mill. Reports from "up country" go to show that the gangs in the Booth camps are taking out pulp wood as well as logs. A large stock of pulp wood has already been taken down to the mill.

This week, says the Paper Trade Journal, of New York, there have been a few inquiries for pulp, but as domestic manufacturers have no surplus that they are willing to part with there have been no sales. Some Canadian ground wood could have been bought to supply those in need, but as this would have cost the buyer about $26.00 delivered, the offer was refused. The situation, therefore, remains as it has been for weeks.

Following the changes in the Cushing Fibre Company, of St. John, N.B., Mr. James Beveridge, who has acted as managing director, will return to England. His services will, it is understood, still be retained in the interests of Capt. Partington. The staff of the Cushing Sulphite Fibre Company now consists of the following: Joseph R. Clarkson, manager and superintendent of mill; H. W. Schofield, secretary-treasurer; William C. Birrell, sales agent.

A writer in the Paper Mill says that American buyers re scouring the market for Canadian pulp wood. Two of them have been negotiating for a 2,000 cord lot in Quebec. They offered $7 f. o. b. on cars, but the holder would not sell at that price. They bid twenty-five cents more, but still without success. The wood is convenient to the United States border, as it is in the Eastern townships. A year ago $5 would have been jumped at for the wood. Now the price is nearly 60 per cent. more.

The Oriental Power & Pulp Company, a corporation of English capitalists, has taken steps to construct the necessary wharves and other preliminary works for large pulp and paper mills to be built on the coast of British Columbia. The proposed pulp mill will have a daily capacity of 50 tons and is expected to be completed within a year. It is the intention to build at once a saw mill, which will cut the lumber to be used in the construction of the pulp mill. Simultaneously with the building of the pulp mill a power house will be built, in which counection Yule Lake will be dammed at the mouth of a small creek, a pipe line half a mile in length carrying the water to the power house. It is estimated that 17,000 horse power can be developed at low water periods. The timber limits owned by the company comprise 83,200 acres, of which 62,000 have already been selected and surveyed. J. J. Palmer, of Toronto, is the only Canadian shareholder in the company.

Charles H. Vogel, mill and hydraulic engineer, of Ottawa, has under way plans for a plant for the Nepigon Pulp, Paper and Manufacturing Company, which is to be located on the Canadian Pacific Railway, about 80 miles east of Port Arthur. The paper mill will be equipped with two large, fast-ruuning paper machines, and the pulp mill will have a daily capacity of 50 tons. The plant will be so built as to make possible a d..ubling of its capacity at a later date, and its present cost will approximate a half-million dollars. Another new plant to be built under Mr. Fogel's supervision the coming spring is that of the Rainy Lake Pulp and Paper Company, to be located in the Rainy Lake country at the head waters of the Rainy River, on a stream which will develop 8,000 horse-power. The company has concessions from the Ontario Government for the water power, together with 272 square miles of timber lands.

Curry & Thrasher, of Forrester's Falls, Ont., have established a camp on a timber limit at Deux Rivieres and are making timber there this winter. It is their intention to clear a site for a sawmill which they will establish at that place next spring.

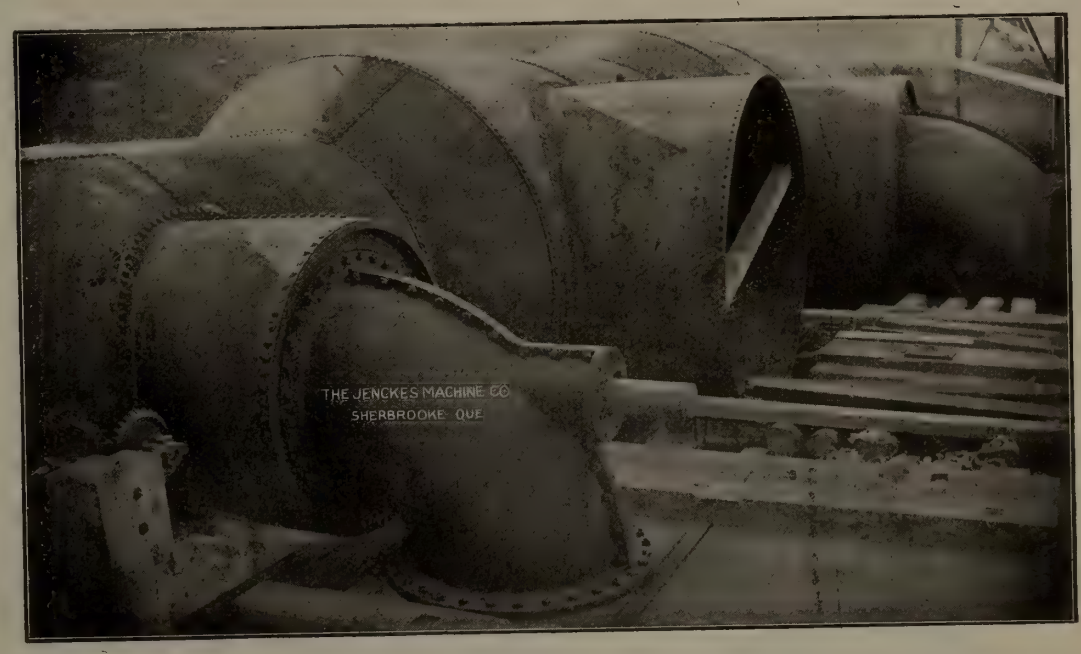
Penstock and Wheel Work at Chicoutimi, Que.
In Process of Completion.

These Wheels are now Running under a Head of 70 feet at this place.



Our Catalog No. 200 gives Tables, Photos and Interesting Details of our Wheels, and will be sent free on request.

We handle large Penstock work, and will be glad to name price on specification. We are now building an 18 foot Penstock of ½ inch plate a mile and a quarter long, at Niagara Falls.

The JENCKES MACHINE COMPANY, Limited
115 Lansdowne Street, SHERBROOKE, QUE.

THE NEWS

—Smith Bros., Limited, have completed a new saw mill at Blissville, N..

—J. B. Coates is installing veener machinery in his saw mill at Dutton, Ont.

—H. Byrnes, lumber dealer, Winnipeg, has been succeeded by Byrnes & Cuddy.

—Keenan Bros. have installed new boilers in their saw mill at Owen Sound, Ont.

—W. H. Atkins, lumber dealer, Deloraine, Man., has sold out to J. H. Lockhead.

—Cromwell & McCurdy have established a lumber business at Lake Duport, Quebec.

—The saw mill of Kastner & Company at Sebringville, Ont., has been sold to E. D. Jacob.

—Malloy & Bryans have installed an electric light plant in their mill at Haliburton, Ont.

—It is the intention of M. T. Flynn to build a new saw mill at Mortier Bay, N.S., next spring.

—The Breckenridge-Lund Lumber & Coal Company has been incorporated at Lacombe, N.W.T.

—The Moose Park Lumber Company, of Moose Park, Que., has obtained a charter of incorporation.

—The lumber firm of Magee & Gregory, Yorkton, N.W.T., has been dissolved, J. A. Gregory continuing.

—Mohr & Ryan, lumber manufacturers, Killaloe Station, Ont., have been succeeded by Mohr & Company.

—The Surrey Shingle Manufacturing Company, of Survey, B.C., has been incorporated, with a capital of $25,000

—The saw mill of Alfred Dickie at Lower Stewiacke, N. S., cut 8,500,000 feet of lumber during the past ason.

—The Scott Lumber Company, of Fredericton, N.B., have decided to build a large shingle mill in connection with the Victoria mill.

—It is said that W. S. Dwinell, of Minneapolis, has decided to build a large saw mill at Edmonton, N.W.T., at a cost of about $100,000.

—The Urquhart Mills, Limited, Vancouver, B.C., has made application to change the name to the Vancouver Lumber Company, Limited.

—George Long, sash and door manufacturer, Sherbrooke, Que., intends building a new factory to meet the requirements of his growing business.

—J. & T. Charlton have re-opened their planing mill at North Tonawanda, N. Y., conducting a general custom business and dressing their own lumber.

—The Goderich Lumber Company have their new mill at Stokes Bay nearly completed and will commence sawing operations early in the new year.

—It is stated that Gardner Bros., of Walkerville, Ont., will erect a veneer mill at Bruce Mines, in which vicinity there is a large amount of hardwood timber.

—The Savanne Lumber Company have decided to discontinue operations at Savanne, Ont. Their mill will be sold and a new mill erected on Steep Rock Lake.

—S. O. Church & Bro., of Sand Point, Ont., have decided to build a cooperage stock mill at Galetta. The machinery will be installed under the direction of Alfred Bloxam.

—The South River Lumber Company, of South River, Ont., have elected the following officers: President, George Thomson; vice-president and secretary-treasurer, W. J. Ard; manager, R. Cook. The company are remodelling their mill.

—Murray & Gregory, Limited, have been organized at St. John, N.B., to take over the business of Murray & Gregory. W. H. Murray is president and J. Fraser Gregory secretary of the new company.

—The William Richards Company have purchased the Morrison property about two miles above Chatham, N.B., from Samuel Lowther, of Belfast, Ireland. It is probable that the new owners will rebuild the mill.

—P. G. Hanson and G. K. Greenlaw have recently purchased R. B. Hanson's mill at Bocabec, N.B., and purpose operating it for the manufacture of box shooks. A number of improvements will be made to the mill.

—The East Kootenay Lumber Company have built a new saw mill at Ryan, on the Moyie river, in British Columbia. It is a splendid plant and has a ten-hour capacity of 45,000 feet of lumber and eight cars of ties.

—The Carney Lumber Company, which recently purchased 200,000,000 feet of white pine timber on the Spanish River, will establish headquarters at Massey, Ont. It is the intention to remove their mill from Witbeck, Wis., to Massey next year.

—The Canada Handle Company, Limited, has been incorporated with a capital of $40,000 and head office at Hull, Que. It is proposed to manufacture a full line of wooden handles. The promoters include C. Jones, of Brockville, and D. F. Jones, of Gananoque.

—The Crown Lumber Company has been incorporated at Woodstock, Ont., with a capital of $40,000, to manufacture wooden bent goods. Those interested include H. Yates, of Brantford, J. R. Duffus, of Thamsesville, and B. W. Yates and W. C. Duffus, of Detroit.

—The C. Beck Manufacturing Company, of Penetanguishene, Ont., have issued a writ against the Ontario Lumber Company, claiming $2,264 as damages for loss sustained, they allege, as a result of the negligence of the latter's employees in allowing their drives of logs to get mixed.

—N. N. Wright has disposed of his interest in the lumber firm of N. N. Wright & Company to his partners, Ralph Loveland and H. P. Stone, and the business at Cutler, Ont., will hereafter be conducted under the firm name of Loveland & Stone. Mr. Wright will return to Saginaw.

—A writ has been issued by Peter Ryan, of Toronto, against Patrick McDermott, of South River, for the specific performance of an agreement under which it is claimed the defendant undertook to purchase from the plaintiff timber berths No. 43 and 51 in the township of Cox and Waldie.

—J. A. McKenney, who was formerly associated with J. A. McBurney in the lumber business at Buffalo, has formed a partnership with Strong & Mecklay, of Philadelphia, under the firm name of Strong, Mecklay & McKenney. The head office will be at Philadelphia, but a yard will be retained at Buffalo.

—The Rathbun Company, of Deseronto, Ont., has been called upon to pay taxes upon logs cut in Franklin township, Muskoka, which were assessed for school purposes. The company appealed to the Court of Revision and the assessment was reduced, but the district judge reversed the judgment and upheld the original assessment. The matter will be taken to the High Court.

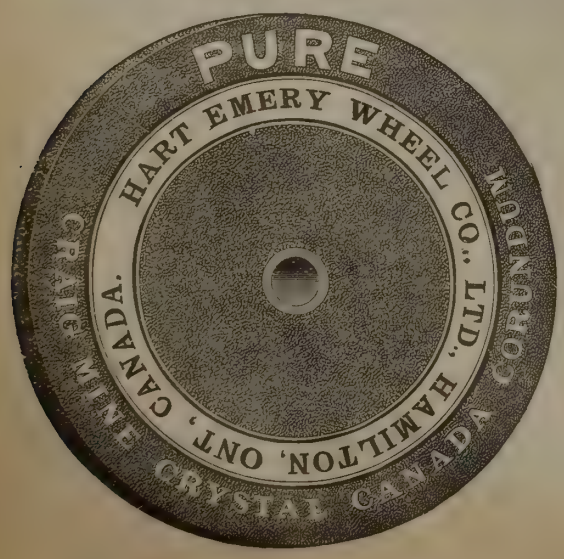
—The Canadian Timber & Saw Mills Company, Limited, an English corporation, have given a contract to D. McArthur & Company to erect a large saw mill at Trout Lake, in the Lardeau district of British Columbia. The mill will have a capacity of 60,000 feet per day. The company will install an electric light plant and will light not only its own works but the town of Trout Lake as well. J. B. Henderson, formerly of Grand Forks, is manager of the new company.

—Alexander B. Allan, of Allan, White & Company, Glasgow, Scotland, a large firm manufacturing steel wire rope and cables, spent some time in British Columbia recently examining into the requirements of the lumber trade. The rapid replacement of horses by donkey engines in conducting the logging industry in that province has made a large demand for steel wire cable, and some brands have not been satisfactory. Mr. Allan is the first representative of an Old Country manufacturing firm to get on the ground and see for himself the requirements of the trade.

—Thomas Southworth, Superintendent of Forestry and Colonization, returned recently from an inspection of the forest reserve situated in Frontenac and Addington counties. Buffalo capitalists have applied for a patent for 100 acres as a mining claim, the land lying within the limit of the reserve. The idea of setting apart this and other reserves was to exclude all settlement, but the presence of mineral deposits of value may render some modifications of the regulations necessary. Present regulations leave it optional with the Government to decide whether miners' applications for lots within the limits of forest reserves will be recognized or not.

—The saw mill which the Red Deer Lumber Company are establishing at Red Deer Lake, in the Saskatchewan district, will, it is said, have a greater capacity than any other mill in the North-West. The equipment will include two band saws and all the latest improved appliances, such as steam niggers, live rolls, lumber transfers and conveyors, etc. The power plant will consist of a 400 horse power engine and a battery of four boilers. The sawing machinery was supplied by the Waterous Company, of Brantford, Ont., and the power plant by the Diamond Iron Works Company, of Winnipeg. The company will manufacture spruce timber almost exclusively.

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says:

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by Canadians for Canadians.

HART CORUNDUM WHEEL COMPANY, Limited, Hamilton, Ont., Can.

NEW CROWN TIMBER AGENTS.

The activity in lumbering operations and the growth of settlement throughout New Ontario has called for the appointment of additional Crown timber agents. The department has decided to divide the Algoma agency and appoint two agents for this territory, which was formerly in charge of the late P. C. Campbell, of Sault Ste. Marie. Mr. Joseph Maughan has been appointed timber agent for the western division of Algoma district, with headquarters at Sault Ste. Marie, while Mr. T. G. Wigg, of Thessalon, has been given charge of the new district of Thessalon. Both were officials under Mr. Campbell. The Temiskaming district will be under the superintendence of Mr. Edward Lloyd, whose headquarters will be at New Liskeard. Mr. Peter W. Christie becomes timber agent at Owen Sound.

Mr. Joseph Maughan has had some experience as a lumberman, in addition to a training in the woods. His first venture was in the cedar business, operating on the Bruce peninsula and Manitoulin island. After eight years he decided to discontinue business, as in those days, the early eighties, cedar was so plentiful and the inspection in Chicago, Milwaukee and elsewhere was so severe that it was simply impossible to make money. In later years he was employed by the late Edmund Hall, of Detroit, Eddy Bros., of Bay City, and the Cutler & Savage Lumber Company, of Grand Rapids, Mich. His duties were chiefly those of a culler. Two years ago he was appointed wood ranger by the Ontario Government. During his twenty-one years' experience in Algoma he has travelled the shore of Georgian Bay, Lake Huron, and through to Michipicoton on foot with nothing but a blazed line or Indian trial for a guide.

The Dyment-Butterfield Company, of Barrie, Ont., intend building a saw mill at Trout Creek.

The annual meeting of the Indiana Hardwood Lumbermen's Association will be held on Tuesday, January 19, 1904, at the Grand Hotel, Indianapolis.

A man named Shaw, employed in Craig & Austin's logging camp in Dysart Township, was killed by a falling limb from a tree which he was cutting.

The advertisement has advantage over most agents in that it does work for the future and in the future. If the advertiser does his part well, the men it brings to him may be held indefinitely. The advertisement will not do it all, but it will do much more than half of the work.—Printers' Ink.

NEW MONTREAL BRANCH.

In order to better serve the continually increasing demands for its comprehensive line of power transmission machinery and to enable it to continue the same efficient service that has always been a noteworthy characteristic of the company, the Dodge Manufacturing Company of Toronto, Limited, will on January 15 open extensive and commodious quarters at 419 St. James Street, Montreal. This will be pleasing news to the many users of transmission machinery in and around Montreal and the east and is a step that keeps pace with the fast development of Canadian manufacturing. A competent staff will be in charge of the new branch and will spare no efforts to increase the efficiency of the service of the company both for users and the trade.

ALWAYS SOMETHING NEW.

The lumber manufacturer or logging operator who does not read carefully his trade journal is sure to miss many ideas which would be found useful to him in his business. The pages of the CANADA LUMBERMAN contain the advertisements of the most wide-awake manufacturers of saw-mill and wood-working machinery, logging appliances, etc. Every month some new and improved appliance is placed on the market. Keep up with the procession by investigating the adaptability of these appliances to your own particular case, and when the opportunity is presented tell the advertiser how interested you are in his announcements in THE LUMBERMAN.

Messrs. R. E. Jameson & Co., of Bannockburn, Hastings County, Ont., have disposed of their limits to the Rathbun Co. and are closing out their business. For the past three years they have operated extensive saw and planing mills. Mr. Jameson goes to Trenton to reside and Mr. Lockart returns to his old home at Seaforth, Ont. Mr. Jameson has purchased a large stock of logs from the Anglo-American Iron Co. and will manufacture them into lumber on the Central Ontario Railway.

FAST CUTTING.

The following communication, which is self explanatory, is found in the Bay City Tribune :

"Collingwood, Ont., October 17.—In your issue of October 14 we notice a record breaker of E. E. Bradley, Elizabethton, Tenn., in which he cuts 53,366 feet a day for seven days with a Garland band mill.

"The following will give our cut for five days of 10 hours. The manager, T. J. McClellan, of Collingwood (formerly of Bay City), now running the two band mills for the Charlton Saw Mill Company, cut with a Garland mill September 29, 30, October 1, 2, and 3, 2,928 logs, producing 334,295 feet lumber, or an average of 585 logs and 66,859 feet of lumber per day. The right-hand mill is a Garland, on which the above cut was made with Simond saws, gauge 14, nine-foot wheel, and 10-inch steam feed. The left-hand mill is an Allis, but the mandrel was broken, hence our getting the cut of one saw.

"The logs are white and red pine, cut as follows: The white pine No. 2 shop and better cut five-eighth and ten-quarter ; Nos. 1 and 2 common and 10 and 12-inch cut five-quarter, excepting last piece on block, which is left two inches. Balance of logs cut four-quarter, with the exception of small logs, which are cut 4x4-5-6-7 for the Steam Heating Company. Red pine cut 50 per cent. four and eight-quarter ; balance three and 4x7-9-11.

"W. J. Gabott, hand filer, Joseph W. Smith, sawyer (formerly of Bay City), J. McKinnon, setter, and A. McIntyre, dogger, made the above cut and we know the same to be practically correct, for it was measured over the trimmer by Henry Hartingh, formerly of Bay City.

THE CAHRLTON SAW MILL COMPANY.

THE LUMBER UNDERWRITERS.

The regular annual meeting of the Lumber Underwriters at Mutual Lloyds was held at the office of the company at 66 Broadway, New York City, on Monday December 7th. The following Underwriters were present :

Messrs. W. C. Laidlaw, of Toronto, Ont.; Chas. M. Betts and Robert C. Lippincott, of Philadelphia, Pa.; C. H. Prescott, jr., of Cleveland, Ohio ; Alfred Haines, Geo. B. Montgomery, Horace Taylor and M. S. Tremaine, of Buffalo, N.Y.; Pendennis White, of North Tonawanda, N. Y.; Frank C. Rice, of Springfield, Mass.; and J. J. McKelvey, E. F. Perry and F. W. Mattocks, of New York.

The fact was brought forth that the company, in addition to carrying risks throughout the United States, has developed considerable business in Canada, making a uniform reduction in premium rates of 20 per cent. off the prevailing tariff rates. Another advantage of the policy of the Lumber Underwriters is the liberal method of short rate cancellation, the company using the standard short rate scale, which is more favorable to the assured than the scale adopted by the Canadian companies.

Since the Lumber Underwriters limit their business exclusively to lumber and woodworking risks, they are able to handle this one class of risks better than a company doing a general business, and although all insurance is accepted at the rate reduction above named, the business has proven extremely profitable, which is a source of congratulation to the Underwriters.

The Montreal Box Company has been incorporated, with a capital of $100,000. The company will take over the business carried on in Montreal by Adam Beck and will manufacture cigar and tobacco boxes, etc.

NOVA SCOTIA LUMBERMEN ORGANIZE.

The Board of Trade of Annapolis Royal, N.S., passed a resolution extending an invitation to the timber owners of Western Nova Scotia to meet in convention in that town to suggest a workable law for the prevention of forest fires and the preservation of timber lands. Acting upon the suggestion, a meeting was held on December 3rd, at which the Lumbermen's Association of Western Nova Scotia was organized, and the following officers elected: President, F. C. Whitman, Annapolis; secretary, A. D. Mills, Annapolis. The membership includes Dickie & McGrath, of Tusket; The Davison Lumber Company, of Bridgewater; Pickels & Mills, of Annapolis; Frank Davison, of Bridgewater; H. T. Warner, of Digby; A. W. Eakins, of Yarmouth; McNeil Bros. & Howe, and Thomas F. Whitman. The conference lasted two days and there was a thorough discussion of the subject of forest preservation, with special reference to the prevention of forest fires. The main feature was the unanimity of all the speakers as to the wisdom and necessity of adopting some practical system. It is proposed to present a memorial on the subject to the Nova Scotia Legislature.

FINED FOR REMOVING STOP LOGS.

Police Magistrate Dumple, of Peterborough, has given judgment in the case of King vs. Wasson. Wasson, a mill owner at Warsaw, was charged with illegally removing stop logs from a Government dam at the head of the Indian river and at its exit from Stony lake. Wasson, it appears, was short of water to run his mill and to increase the flow removed stop logs against the will of the man in charge of the dam. The logs were replaced, but Mr. Wasson took a saw and cut out a stop log, and, arming himself with a gun for a part of two days, enforced non-interference with the stop logs by the official custodian. The judgment declares Mr. Wasson guilty of wilfully doing an injury to a public work, and the smallest penalty provided for the offence, $100 and costs, was imposed.

FOR SALE—MACHINERY AND SAWS. GOOD AS NEW Saws from 48 to 60 inches. Let us know what sizes you have to trade. J. F. Porter, 355 Carlton Street, Winnipeg.

The Standard
Channel Steel
Roller Bearing
Dry Kiln Truck

has wheels of **malleable**—not cast—iron. The cast iron wheel seems to be good enough for other trucks ; but it's not for "The Standard."

Malleable iron more than doubles durability. Of course it costs **us** more—but get the prices before you decide that it's going to make the truck cost **you** more than you want to pay.

Then the roller bearings. We've a new way of making them—with pin-pointed ends—which reduces the friction to a minimum, and makes "The Standard" truck far the easiest-running on the market.

Catalogue "D" shows all the styles and parts and tells about them. May we send you a copy ?

AN INTERESTING LETTER CONCERNING COOPERAGE STOCK.

Mr. J. C. Shepherd, of Tilsonburg, Ont., sends to our contemporary, Packages, a very interesting letter on the cooperage stock situation, in which he advocates the employment of soft wood for staves. He says :

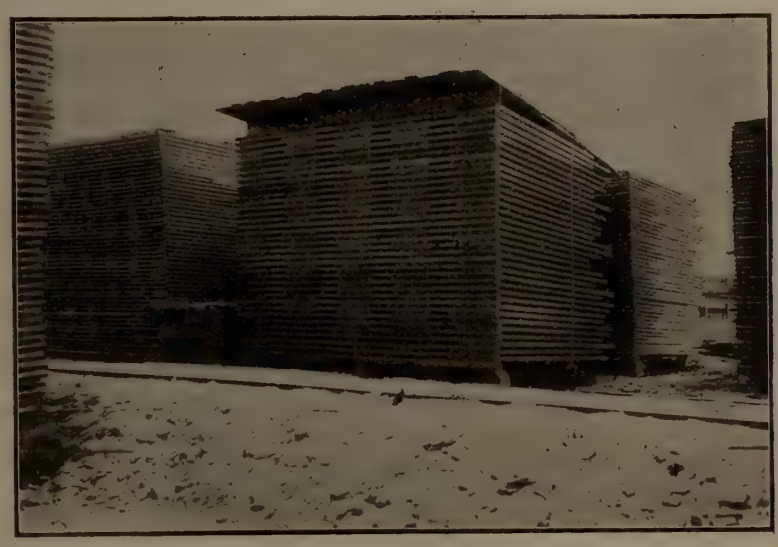
"Last year was a very much off year with us. The supply of elm having given out the year before, I didn't even get in one log. Things looked mighty blue, and I began to look around for something else to do—a hardware stock, a farm or some other easy thing to end my days on; chance threw me in company with a miller who had heard that poplar and other soft woods made a first rate flour barrel stave and was willing to try them if he had some to try. Well, I knew where there was an old stave saw that had been lying around in saw dust heaps for six or seven years that could be had for almost any price, so I picked up that saw, fixed it up, set it up and made a few staves which I sent out for samples to some of my old customers. Sent out six lots and five out of the six wanted to buy. To one of these, the one who had first spoken to me about the staves, I sent a carload and they gave such good satisfaction that he bought all I had and all I could make the rest of the season. For this year his company takes half the saw can cut, while another company takes the other half.

"Naturally I feel pretty good, with all this work before me, and wouldn't take a hardware stock nor a farm just now as a gift. And, what's more, this thing is going to last me my time out, and a generation or so after me, if not on for all time, for you see these soft woods reproduce themselves every few years and with a little care the supply will keep up to the demand and then the thing will be everlasting.

"A few weeks ago I was in a bush where a hundred or so cords of poplar had been taken out for pulp-wood 10 or 12 years ago, and today as much more is there for stave wood. This, then, will do away with the notion that the slack barrel will have to be abandoned for another package because the supply of material will be exhausted. And then, mind you, this sawed stave barrel is a great barrel—far ahead of any cut-stave barrel that was ever made—no shake, and every one of them will ring like a pork barrel, a thing no cooper could ever make a cut stave barrel do. And again, the wire hoop is just the thing on the quarters—far stronger than a cut hoop, and never going to break in course of transportation, as the cut hoop so often used to do.

"Now then for a sort of sum-up, let me say that it seems to me slack barrel coopering is going to be just about turned upside down. Soft wood for staves and hard wood for heads. Beech, birch, maple and any old thing that can be picked up for heads. Poplar, basswood, spruce, balsam, hemlock, tamarack, and other soft woods for staves. Wire for hoops, with the exception of the chime hoops, which can be made out of birch quite as well as elm. This, then, is how I see it in the future. And in the very near future, if this cold weather continues, and there is every indication that it will, a drop in prices down to those that prevailed the year before last, but never so low as they were a year or so ago.

"As you know, winter has much to do in fixing the price on forest products. In fact, it can do more than a meeting or even two meetings of any association that was ever organized. From the outlook now this winter promises to be a very low-priced winter—next summer."



PILE OF BROAD 2 INCH CLEAR SIDINGS, 24 INCHES AND UP WIDE, FRASER & COMPANY'S YARD, DESCHENE, QUE.

Timber contains 45 per cent. of its weight in moisture. Timber felled in the winter holds at the end of the following summer more than 40 per cent. of water. Wood kept for years in a dry place retains 15 or 20 per cent. of water; wood that has been thoroughly kiln-dried will, when exposed to the air under ordinary circumstances, absorb 5 per cent. of water in three days, and will continue to absorb till it reaches 14 or 15 per cent., the amount fluctuating above or below this according to the state of the atmosphere. It will be evident, from the above statments, that wood, however dry, is still subject to change, and that even if kiln-dried, it requires to be stocked in a dry place until it settles to its natural condition of seasoned wood.

EXPERT SAW FILING.

LOCHLIN, January, 25, 1904.

EDITOR CANADA LUMBERMAN :

DEAR SIR,—In order to substantiate the claim made by me in the January LUMBERMAN, viz., that there is a great loss from improper saw filing, I will cite an instance that I made note of some time ago. I was employed with a lumber company who had a filer in their employ who ran his 8 gauge circular saws with 3/8 swage. The following season I had charge of the same filing room and had no trouble in running the same saws with 1/4 swage, and I put out the cut of 900,000 feet in shorter time than the man the year before had taken to cut 500,000 feet. I figured that he made a loss to the company by swaging his saws 1/8 too heavy of 62,500 feet of lumber, which was worth that year $812.50, to say nothing of the lumber that was reduced in price by bad sawing. Therefore, it is plain that the smallest fraction of unnecessary swage will count a large loss at the end of a season's cut. Now, the fact is that the better the saw is levelled and the more evenly it is tensioned and balanced the closer it will run to the timber, allowing the filer to diminish the swage to a trifle clearance and making a great saving of timber, time and power.

I see no other way of getting a uniform practice among saw filers than to establish an examination and furnish them with a diploma for the proficiency of their work. A manager of a well-known lumber firm, noticing my article in THE LUMBERMAN, told me the other day that he did not think my plan would improve that trade, as he said lots of men could talk theory on saw filing who could not do the work, but he freely acknowledged that a great loss was caused by poor mechanics in that line. I told him that the system of examination would not be only talk, but test, as the examination could be in a mill or in a saw works where each man's work could be tested by an expert, the same as a log scaler's examination, by giving them a certain piece of work to do. There is no reason why it would not improve the work of saw filers and be profitable to the manufacturers.

Yours very truly,

T. A. MCALLISTER.

An estimate made recently by the Crown Lands Department of Quebec gives the forest area of that province as two hundred million acres. On this it is estimated there is sixty thousand million feet of standing timber, exclusive of pulp wood and undersized trees.

THE LUMBER TRADE OF 1903

Review of Conditions Throughout the Dominion.—Statistics of the Export Trade.—Prices Higher, but Cost of Production Proportionately Greater.—Favorable Outlook for 1904.

THE statistics which we publish in this number confirm the general opinion that the lumber trade has passed through another year of prosperity. The volume of business was of large proportions, and while the exports to European countries fell off slightly, this was probably due to an enlarged home consumption and increased shipments to the United States, of which no complete returns are available. The record of the white pine trade is very gratifying, and as each year goes by the conviction becomes more thoroughly grounded that there is no better asset in Canada than white pine timber.

Of the lumber requirements British Columbia furnished a greater percentage than in any previous year. There was a good local demand, heavy shipments were made into the Canadian Northwest, and exports to foreign countries were on an enlarged scale. In the latter connection the marked expansion of business with South Africa is a reason for congratulation, as showing that Canadians are gaining a foothold in that market.

Spruce lumber has many competitors in foreign markets, and when due consideration is given to this fact, it must be admitted that prices were sustained remarkably well. The falling off in spruce shipments was no more than could have been expected in view of the unsettled condition of the British market.

The year witnessed the erection of a number of new saw mills in various parts of Canada—more perhaps in British Columbia than in the other provinces. In mill improvements substantial progress was made, the installation of numerous double cutting bands being an evidence of the determination of manufacturers to keep up with the march of progress.

The indications are that during the coming season lumber will find a ready sale. There may not be as much snap to the demand as in 1903, for the Presidential election in the United States must be reckoned with; but a steady trade at remunerative prices may reasonably be expected. There will be little lumber forced upon the market, as manufacturers are in a position to hold their stocks through temporary depression.

ONTARIO.

The lumber manufacturers in Ontario have expressed satisfaction with the business of 1903. Although some adverse influences prevailed, conditions in the aggregate were favorable. Dealers were somewhat handicapped by the difficulty of finding suitable stock, as early in the year a large percentage of the lumber production was placed under contract. United States firms were aggressive buyers of pine lumber, their purchases probably exceeding hose of 1902, which was considered a banner year for white pine. Last spring log run pine was freely contracted for at an average of from $20 to $22 per thousand feet, but some sales were made considerably above these figures. Those manufacturers who sold on grades realized equally good prices. During the first six months all kinds of pine lumber were very active and strong, but towards the fall there was a slight falling off in the demand for dressing and better, which resulted in a decline in the prices of these grades of from $2 to $4 per thousand. The phenomenal demand for box lumber was easily the feature of the white pine trade. Everything suitable for making boxes was bought up at an advance of about $3 per thousand as compared with the prices obtained for box lumber in 1902. There was also a large consumption of mill culls, which also improved in price. It is fair to assume that the white pine product of Ontario was disposed of at an advance of $2 per thousand over the 1902 prices. The developements of the year demonstrated that white pine lumber is still favored by many consumers.

The history of the hardwood trade records substantial improvement. The consumption by local industries was almost as great as the production, leaving but a small quantity of hardwoods to be exported. The mill man, therefore, gave little concern to the disposal of his lumber, as buyers were numerous and usually eager to contract for stock even at the higher prices. Thoughout the year there was a scarcity of basswood and thick maple, and orders had sometimes to be refused on account of inability to supply the desired stock. The tone of the hardwood market continued good up to the close of the year. Prices appreciated from $2 to $4 per thousand. Mill run soft elm and maple which in 1902 bought $16 per thousand at the mill sold last year at $19. Basswood bought $21 and ash $20, as compared with $17 the previous year. Hardwood timber is becoming scarcer and indications point to a liberal demand and good prices for hardwood lumber during the coming season.

Hemlock lumber was used to a greater extent than ever before. The average price at the mill was about $11, as against $10 the previous year. The comparative cheapness of this class of lumber is likely to result in a still larger consumption during the year 1904.

The shingle market was rather unsteady during the year. Dealers in Ontario found themselves with too heavy stocks of red cedars, and in attempting to unload, prices were weakened. This in turn had its effect on white pine and white cedar shingles, although prices did not break more than fifteen cents per thousand. The close of the year found several manufacturers carrying a considerable supply of white pine shingles, for which they had not found ready sale and which they did not wish to force upon the market lest it should become demoralized. The feeling in the shingle trade is now more hopeful, and, given a good building season, both demand and price should improve.

From the foregoing remarks the conclusion would be natural that lumber manufacturers had made a great deal of money during the year. This, however, was not the case. The increased prices obtained were in large part wiped out by the excessive cost of labor and supplies and the inefficient service rendered by the average lumber employee. Work in the woods was extremely costly; the woodsman did not accomplish within fifty per cent. of as much work as the woodsman of a few years ago. There was also great difficulty experienced in keeping the camps in operation owing to the number of "jumpers." The net profits accruing to lumbermen, therefore, were probably little, it any, greater than in the previous year.

OTTAWA VALLEY LUMBER SHIPMENTS.

Mr. H. M. Sanford, Deputy United States Consul at Ottawa, furnishes the following statement of the quantity of lumber shipped to the United States from the consular district of Ottawa :—

	Feet B.M.
Pine lumber	94,875,941
Ash	419,365
Basswood	1,509,255
Birch	73,436
Elm	22,975
Hemlock	266,399
Maple	18,500
Oak	4,000
Red Pine	1,973,296
Spruce	4,890,774
Total	104,053,941

The production of white pine lumber was about equal to that of 1902. The Georgian Bay district shows an increase of about 10 per cent., while this increase is offset by a smaller output in the Ottawa valley. In the following comparative table of the Georgian Bay production, the figures apply almost exclusively to white pine :

GEORGIAN BAY PRODUCTION.

Place.	1902. Feet B. M.	1903. Feet B. M.
Midland	70,000,000	64,000,000
Parry Sound	60,000,000	57,000,000
Sarnia	50,000,000	36,000,000
Byng Inlet	48,000,000	42,000,000
Little Current	40,000,000	46,000,000
Blind River	38,000,000	51,000,000
Waubaushene	30,000,000	30,000,000
Sandwich	23,000,000	26,000,000
Collingwood	23,000,000	16,000,000
Penetanguishene	23,000,000	40,000,000
Cutler	20,000,000	37,000,000
Gravenhurst	20,000,000	25,000,000
Spragge	20,000,000	27,000,000
Victoria Harbor	42,000,000	50,000,000
French River	18,000,000	16,000,000
John's Island	17,000,000	17,000,000
Spanish River	16,000,000	16,000,000
Bracebridge	14,000,000	14,000,000
Huntsville	15,000,000	15,000,000
Severn	10,000,000	5,000,000
Cache Bay	17,000,000	19,000,000
Callendar	6,000,000	10,000,000
Bobcaygeon	6,000,000	4,000,000
Warren	5,000,000	15,000,000
Powassan	3,000,000	2,000,000
Thessalon	7,000,000	16,000,000
Other Points	20,000,000	25,000,000
Total	661,000,000	721,000,000

The reason for a decline in the Ottawa Valley production is probably found in the great distance of the mills from the source of timber supply. This distance is each year increasing as the timber is cut away, and while for a number of years the Ottawa Valley was the premier white pine district of Canada, this honor is now held by the Georgian Bay district.

The production of the mills of the Ottawa Valley for 1902 and 1903 was as follows:

OTTAWA VALLEY PRODUCTION.

	1902—Feet.	1903—Feet.
J. R. Booth, Ottawa	125,000,000	115,000,000

Total	608,000,000	562,000,000

A. Hagar & Company, of Plantaganet, sawed this year almost exclusively on contract for the Rideau Lumber Company.

QUEBEC.

The lumber manufacturers of the Province of Quebec suffered inconvenience and loss during 1903 owing to extreme drouth through the spring and summer, and, in fact, continuing well into the fall. Many logs were hung up, and consequently the mills were not kept in constant operation. There was a good demand for spruce lumber throughout the year, and, on the whole, prices were slightly higher than in the previous year. Almost without exception manufacturers placed their production of British deals under contract early in the season, so they were not affected by the temporary decline in spruce prices which occurred in Great Britain about midsummer. Clapboards were exported largely to the United States, and prices continued high until near the close of the year, when there was a drop of about $3 per thousand feet, part of which was subsequently recovered. Cedar shingles sold slightly higher than in 1902. Stocks at the close of the year were exceptionally light, and conditions are favourable for another good season.

The trans-Atlantic shipments from the St. Lawrence ports show an increase of 5,698,345 feet. This increase is due to the expansion in trade at the way ports, as the exports from Montreal and Quebec show decreases of 9,243,418 and 6,500,285 feet respectively.

The exports from Montreal in 1903, in comparison with the previous year, were as follows:—

MONTREAL LUMBER SHIPMENTS.

	1902. Ft. B. M.	1903. Ft. B. M.
Watson & Todd	51,311,775	51,801,668
W. & J. Sharples	42,344,225	41,845,282
Dobell, Beckett & Co.	40,711,000	35,594,600
R. Cox & Co.	30,326,457	24,162,470
J. Burstall & Co.	20,066,117	22,105,969
Charlemagne & Lac Oureau Lumber Co.	14,428,674	10,289,247
McArthur Export Co	13,508,543	15,412,412
McLaurin Bros.	7,000,000	7,478,000
Cox, Long & Co.	4,997,726	8,941,100
E. H. Lemay	2,335,000	1,815,000
Railways, small shippers, etc.	11,442,596	11,782,947
Total	240,472,113	231,228,695

The shipments from Ottawa via Portland, Boston and other ports, which were of considerable volume, are not included in the above.

FROM PORTS EAST OF MONTREAL.

From ports east of Montreal the trans-Atlantic shipments were:

Shippers	Quebec. Feet.	Three Rivers and Pierreville. Feet.	Other Ports. Feet.
Dobell, Beckett & Co.	28,803,800	34,171,200	.....
W. & J. Sharples	27,394,643	10,429,870	3,505,200
Price Brothers & Co.	.....	.....	56,658,178
McArthur Export Co., Ltd.	12,953,511	.....	.....
J. Burstall & Co.	2,313,381	.....	.....
H. R. Goodday & Co.	16,054,343	.....	.....
King Bros., Ltd.	15,833,139	.....	.....
Harold Kennedy	6,336,000	.....	.....
Total 1903	109,688,817	44,601,070	60 163, 378
Total 1902	116,189,102	27,882,200	55,440,200

It will be seen that of the Quebec exporters Messrs. Dobell, Beckett & Company head the list with a total of 102,074,800 feet from St. Lawrence ports, followed by Messrs. W. & J. Sharples with 76,669,795 feet.

We are again indebted to E. J. Dalkin for the following particulars relating to the Quebec trade, extracted from the annual timber circular of J. Bell Forsyth & Company.

WHITE PINE.--The stock of waney and square together is under that of any recorded year, except the preceding one. Prices reported paid for rafts now making show a very considerable advance over any previous figures. No doubt present values are fully justified by the greatly increased value ot standing white pine, but the continued advance demands caution, as it will certainly eventually affect consumption.

	Supply.	Export.	Stock.
1903	Square.. 419,600 Waney..1,865,560	2,181,961	413,469 Square 406,038 Waney
1902	Square.. 384,440 Waney..1,830,120	2,445,548	395,962 Square 61,363 Waney

RED PINE.—The supply and stock are again under all previous records, and business in this wood as square timber is rapidly disappearing.

	Supply.	Export.	Stock.
1903	57,360	84,292	53,225
1902	71,160	80,190	66,998

OAK.—The wintering stock shows a decided increase over the low figures ot recent years, owing to advanced prices having stimulated production. There is every certainty of a great reduction in the manufacture this winter, and it is well there should be.

	Supply.	Export.	Stock.
1903	926,680	651,969	491,851
1902	652,520	578,121	192,162

ELM.—The supply continues to fall rapidly in face of advanced prices freely given. First-class rock elm of good average girth and cube is within measurable distance of becoming a thing of the past. Stock figures are swollen by a large quantity of soft elm that remains unshipped from year to year, and include very little real rock elm.

	Supply.	Export.	Stock.
1903	417,800	477,217	419,659
1902	561,920	586,777	539,183

ASH.—Seems rapidly going out of consumption in the United Kingdom, no doubt under the influence of changed fashion in furniture. There is no present appearance of an improved demand.

	Supply.	Export.	Stock.
1903	57,200	59,441	47,035
1902	79,920	49,970	49,818

BIRCH.—The export of this wood from Quebec steadily tends to diminish, Montreal, from various reasons, taking a larger proportion of the shipments.

	Supply.	Export.	Stock.
1903	196,240	201,521	11
1902	260,200	247,390	5,739

SPRUCE DEALS.—Export from Quebec and Lower St. Lawrence has somewhat exceeded last year's shipments, and a small wintering stock remains in the port. The returns of stocks wintering do not include those at the various mills below Quebec. The shipments made from Montreal, Three Rivers and other ports above Quebec are not included in export figures. Values seem likely to be fully maintained. The cost of production has materially increased.

	Supply.	Export.	Stock.
1903	4,919,710	5,060,053	157,213
1902	4,735,657	4,691,149	297,556

PINE DEALS.—A further advance of ten per cent is being held for by the Ottawa millowners for coming season's production, and has been paid in some instances. Following the similar advance established last year, this brings these goods up to prices which, though they may be quite justified by Canadian conditions, will be reluctantly paid by United Kingdom importers. Export from Quebec has become very inconsiderable.

	Supply.	Export.	Stock.
1903	41,890	49,730	2,570
1902	116,432	114,480	10,410

SAWN LUMBER.—A considerable quantity of spruce lumber has been shipped this season to the River Platte, the market there having improved. Local consumption has been large, and the demand for the United States has been greater than for some years past. The available stock of spruce lumber in first hands is in consequence nil.

FREIGHTS.—Opened for Montreal liners at 36s. 3d. London, 35s. Glasgow and 32s. 6d for Liverpool, became weaker as season advanced, and only rallied to higher figures quite at the end of shipping season. Quebec rates for timber ruled at about 60s. for leading ports, with higher rates for surplus hardwood.

THE MARITIME PROVINCES.

No expansion of the lumber business ot the Maritime Provinces occurred during 1903. On the contrary, shipments show a considerable falling off owing to two causes—first, an inadequate supply of logs to keep the mills constantly in operation, and secondly, the somewhat unsettled condition of the British market. The log shortage was perhaps a blessing in disguise, for it is doubtful whether the markets could have absorbed much more lumber than was manufactured without bringing about a decline in prices. As it was, the manufacturers realized fair prices and net profits were nearly as great as in the previous year.

The log cut on the Miramichi river in the winter of 1902-1903 was 125,000,000 feet, against 123,000,000 feet the year before. Lack of sufficient water was a great drawback to stream driving operations, and as a consequence a portion of the log output was hung up. On the St. John river, also, 40,000,000 feet of logs failed to reach the mills on account of drouth. The logs hung up will, in all probability, come out next spring and be available for early sawing. The estimated cut of logs on the Miramichi river this winter is 200,000,000 feet. The stock of logs wintering on the Miramichi is 5,000,000 feet more than last year, and the sawn lumber 10,000,000 feet greater.

It will be seen from the statistics below that the total trans-Atlantic shipments of lumber from the province of New Brunswick were 391,000,000 feet, a decrease of 61,000,000 feet as

compared with the previous year, and the smallest since 1896, when they were 386,000,000 feet. The port of St. John shows a falling off of 25,000,000 feet, and Miramichi 20,000,000 feet.

No complete returns are obtainable showing the shipments to the United States, which were quite heavy, that market having absorbed a larged quantity of spruce clapboards, cedar shingles, and lath. From the consular district of St. John the shipments of lumber, shingles and lath to the United States were valued at $941,851, as against $1,105,714 in 1902, or a decrease of $163,963. The statement for 1903 as furnished by the United States Consulate is as follows:

LUMBER EXPORTS FROM ST. JOHN, N.B., TO UNITED STATES, 1903.

Canadian lumber	$107,821	
American lumber (equal to 54,348,500 feet)	435,664	$543,485
Canadian laths	$187,295	
American laths	57,668	244,963
Canadian shingles	$ 53,021	
American shingles	100,382	153,403
Total		$941,851

During the early part of the year there was a brisk demand for spruce clapboards for shipment to Boston and other eastern points, where for a time they sold as high as $45 for No. 1, wholsale. This price was not held through the entire year, however, although the market remained firm. New Brunswick cedar shingles opened the year strong, with extras selling readily at $3.50 for Boston delivery. Towards midsummer competition from red cedars resulted in a decline of 15 cents and for the balance of the year the shingle market was irregular, closing with the price of white cedars at about $3.40 for extras. There is a considerable stock in the hands of manufacturers, buf the winter production is likely to be smaller than usual. The increase in the stumpage dues on cedar timber, which has just been put into effect, should have a tendency to enhance the value of cedar products of all kinds. The trans-Atlantic shipments from the different ports of New Brunswick for the past two years were as follows:

SHIPMENTS FROM NEW BRUNSWICK BY PORTS, 1902 AND 1903.

Port.	1902. Sup. feet.	1903. Sup. feet.

Country.	No. of Vessels.	Sup. ft. deals, boards, etc.
England	44	63,862,026
Ireland	29	31,461,655
France	3	6,744,000
South America	1	876,595
Total	77	102,944,276

There was also shipped to England 1,266,573 feet of spool wood.

The year was more profitable to the lumber manufacturers of Nova Scotia than to their confreres in New Brunswick. They did not suffer to the same extent from drouth, and a large and profitable trade was done with South America and the West Indies. These markets absorbed a great deal of lumber with comparative ease, and at the close of the year prices were advancing. South American stock which in 1902 sold at $15.50 per thousand readily brought $16.50 last year. British deals were sold at an advance of about ten per cent. The advance, however, did not go into the pockets of the manufacturers, but represented higher wages and other increases in the cost of logging operations. Mr. Alfred Dickie, of Stewiacke, was the largest shipper from the province, exporting 55,000,000 feet of deals, besides a large quantity of lath. A considerable quantity of hemlock lumber was shipped from Nova Scotia. Unfortunately, it has been impossible to obtain the complete returns of shipments from Nova Scotia.

BRITISH COLUMBIA.

The year was one of unsettled conditions for the lumber trade of British Columbia. Business started out prosperously. Mills were operating to their full capacity, and there was an active demand for lumber. The great expansion in the production, however, was more than the markets could stand, and before many months passed there were evidences that the supply was gradually exceeding the demand. The manufacturing capacity which was greatly increased in 1902, was further enlarged last year, when several large mills were completed and put into operation for the first season. In the Kootenay district alone 109,000,000 feet of lumber was manufactured. The situation promised to become somewhat serious, when steps were taken by the manufacturers to restrict the production. The British Columbia Lumber and Shingle Manufacturers' Association, acting in conjunction with the Mountain Lumber Mannfacturers' Association composed of the interior mills, was successful in regulating the supply, with the result that prices during the year were well maintained.

The over-production in shingles was more apparent than in lumber, but in the fall an arrangement was affected for the disposal of the combined output in a manner which, it is expected, will ensure a steady market during the current year.

Apart from the home consumption of lumber, which was above the average, especially in Vancouver, where it increased about 30 per cent. during the year, the most important factor of the lumber industry is the Northwest market, and that factor will be more and more apparent in the future. In respect to that market, however, the interior mills of British Columbia are in a much better position to compete than those of the coast. The latter have a 40-cent rate with two mountain ranges, against a 15-cent rate in the mountains, with only one mountain range to cross.

The export lumber trade of British Columbia shows a growth for the year, the Victoria Lumber and Manufacturing Company having greatly increased their shipments from Chemainus. The only other exporting firm is the British Columbia Mills, Timber and Trading Company of Vancouver. The total exports were approximately 62,000,000 feet, as against 56,000,000 feet in 1902. The Victoria Lumber Company exported 32,000,000 feet and the B. C. Mills, Timber and Trading Company 30,000,000 feet.

The significant feature of the year's export business is the increased trade with South Africa, the shipments being more than double those of the previous year. A much larger business was also done by British Columbia lumbermen with the United Kingdom, and there was a slight increase in the shipments to South America. On the other hand, the trade with Australia shows a marked falling off. The figures in detail for two years are given below:

SHIPMENTS BY COUNTRIES.

	1902 Feet B. M.	1903 Feet B. M.
Australia	20,632,584	5,305,185
South America	8,815,833	10,128,027

Belgium	950,449	.....
Total	55,855,405	61,942,986

DIAGRAMS OF TIMBER SUPPLY.

We reproduce on the opposite page diagrams showing the periodical estimates of the duration of the supply of Canadian spruce, Canadian pine and Baltic deals at London, England. The diagrams make a comparison with the averages of the five years preceding 1900, and will doubtless be found interesting.

It will be seen that of the supply of the past four years, the heaviest stock of Canadian pine, 45 per cent. above the average, was on 30th April and 31st July, 1901, and 28th February, 1902. Throughout the whole of the year 1903 the supply was above the average, although at no time did it reach the maximum of the two previous years. The heaviest stock was on 30th June, after which time it diminished, and on 31st December was the smallest of the year. Spruce, likewise, reached the highest limit last year on 30th June. The lightest stock was on 31st October, gradually increasing during November and December to 20 per cent. above the average.

ANNUAL TIMBER MARKET DIAGRAMS

Showing the periodical estimates of the duration of supply at London, England, in comparison with the averages at the same time in the previous five years. Compiled by Messrs. Foy, Morgan & Company.

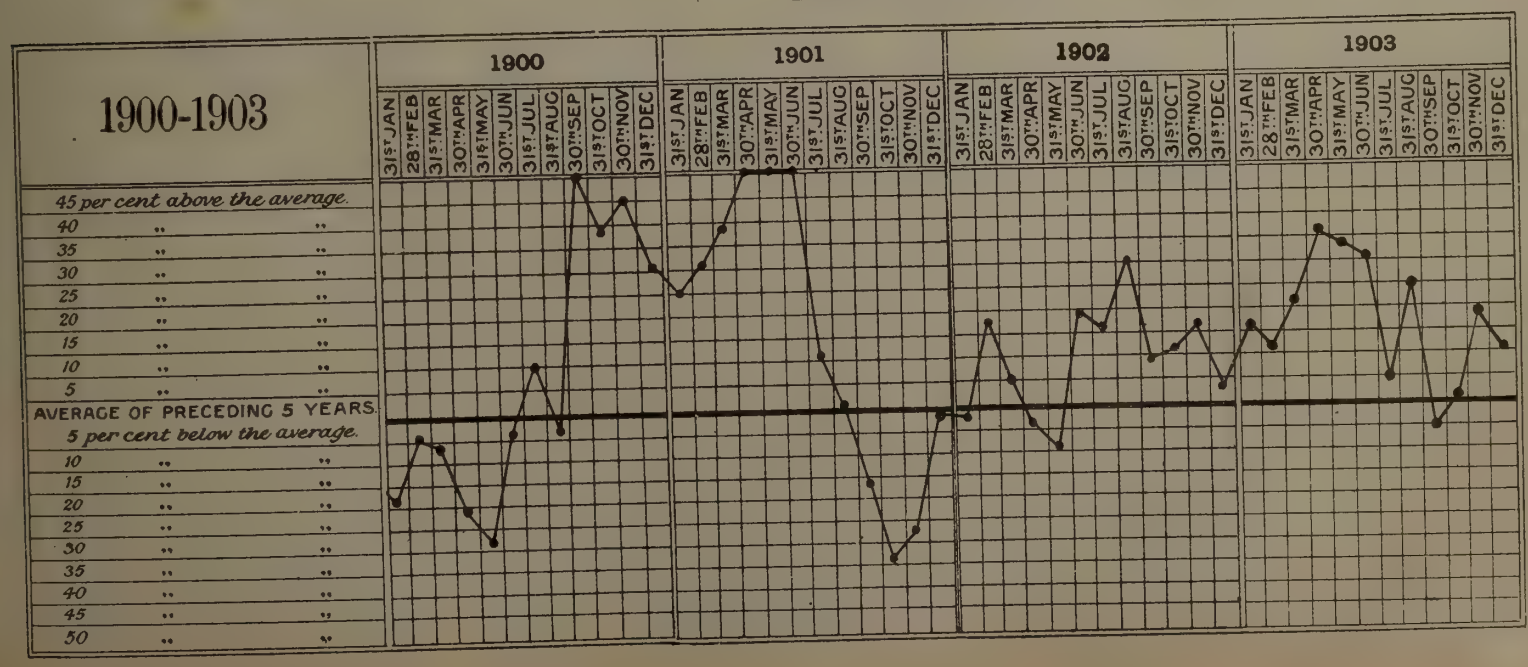
BALTIC DEALS.



DOES LUMBER COMBINE EXIST IN THE WEST?

Statement Issued by Mr. D. E. Sprague with Reference to Recently Published Interview with Vice-President Whyte, of the C. P. R.

In a recently published interview, Mr. William Whyte, second vice-president of the Canadian Pacific Railway, is reported as saying that "the owners of saw mills, and retail dealers in lumber, are endeavouring to maintain high prices for lumber and to surround the retail business with restrictions which tend to influence the market," and that while "it may be possible that there is no combine among the mill owners," yet "there is certainly an arrangement with the Retail Dealers' Association under which that association dictates as to the location and number of retail lumber yards, and thus practically controls the market and dictates the selling price."

With reference to this matter, Mr. D. E. Sprague, of Winnipeg, gives out the following statement:

There has from time to time appeared in the press much unfavourable and unjust criticism of the Lumbermen's Association, sometimes by politicians, whose motives it may fairly be assumed were not any philanthropic desire to protect the public, but for reasons of a much more personal nature, either political advantage or personal gain. Other criticisms have been by those originally members of the association who did not consider the rules and regulations sufficiently rigid to meet their views, and therefore sought such advertising as opposition to the association would give them. All such criticisms I have considered were not entitled to either answer or explanation. Now that a prospective competitor has appeared in no less a company than the C.P.R., through its manager, Mr. Whyte, who gives a lengthy interview in the press, not complimentary to the association, it is only fair that the public should be given the facts. Mr. Whyte's unjustifiable statements may be due to the fact that for the past year or so he has not been so intimately connected with the operation of the C.P.R. as formerly, and in consequence would not have so great a knowledge of the conditions obtaining throughout the country regarding the lumber supply, or the very unsatisfactory service provided by his company for the transportation of the necessary supplies, or it may be that Mr. Whyte has been misinformed by some of the other officials since assuming the active management of the road.

I agree with Mr. Whyte to this extent, that next to the continual agitation in connection with the exorbitant freight rates and inefficient transportation facilities generally, there is nothing probably which tends more to retard immigration than the bug-bear of high-priced lumber and the difficulty in securing building material at a reasonable price. That it is a bugbear and not a condition can be easily established.

C.P.R. AS MANUFACTURERS.

The Canadian Pacific Railway or any other railway company receiving government aid by grants of timber or other lands, has no right to enter into competition with private individuals, in either manufacturing or business enterprises. This principle is generally recognized by governments, by refusing to grant permission in their charters. The manufacturers of lumber, I am sure, would cheerfully welcome as brother lumbermen any C.P.R men who would invest their own capital and do business under the same conditions that the present lumbermen have to meet. This would be a very different proposition to C.P.R. officials conducting a lumber business with C.P.R. funds, and finally losing sight of the profit or loss in a general round-up of the C.P.R. profits.

REASONS FOR ASSOCIATION.

Previous to the year 1890 or 1891, the lumber manufacturers sold direct to the consumers throughout the country. This naturally took from the retail dealer the most desirable trade in his territory, and in many cases rendered it impossible for him to make a living. The trade generally was in a most unsatisfactory condition. The dealers realized that something must be done to save the capital invested, and protect them from the unfair competition referred to. The manufacturers were in sympathy with the dealers in this movement, inasmuch as it improved the condition of the retailer and enabled him to more promptly meet his bills. The association was, therefore, organized to protect its members from unfair competition, to collect and distribute among its members such information as may be of service to them, and generally in the interest of the retail lumber trade to watch carefully the probable public requirements, and endeavour at all times through its members to have at all points a sufficient stock of lumber to meet the demands.

Among the first public services rendered by the association may be mentioned a reduction of 5 cents per 100 pounds on the then existing rates on lumber, secured through a letter dated about ten years ago, and addressed to the General Passenger and Freight Agent of the C.P.R., which letter was presented by a deputation of the dealers urging action thereupon, and a further reduction was at the same time obtained by the dealers from the manufacturers, both of which reductions were given to the consumers.

The following is a copy of the letter referred to:

WINNIPEG, Feb. 13, 1894.

R. Kerr, Esq., Gen. Freight and Pass. Agent, Western Division of C.P.R.

Dear Sir—At the annual meeting of the Western Retail Lumbermen's Association, having a membership of 150 and comprising all the retail yards of this province and the eastern part of Assiniboia, held here on the 12th inst., the question of the existing freight rates was discussed, and a committee appointed to bring under your notice that the rates charged by your railway are excessive and burdensome.

The committee chosen desire to submit for your consideration the cost and charges on lumber to the consumers; the price paid for rough lumber at the mills being the grade largely used by farmers per 1,000 feet on cars is, at Rat Portage, $12; Fort William, $10; and British Columbia, $8. The average freight thereon is, from Rat Portage, $6; Fort William, $10; and British Columbia, $.. The terms upon which lumber is sold are 60 days, with freight as cash. Add to the wholesale cost at the point of sale the retail dealers' charge, say, $3, and it will be readily seen that the cost of lumber is more than the consumer can afford to buy it at, and, as a matter of fact, so much so is this felt that very many farmers throughout the country continue to live in sod houses, and in more than half of the country a few miles distant from the railway the outbuildings are sod. In order to overcome this disability and improve the existing state of matters, we ask you to make a considerable reduction in the freight rates charged upon lumber, and while we do so it is our opinion that a reduction in the price of lumber will vastly increase the demand for it, and to such an extent, that in a short time the increased hauling of it will more than compensate your company for the lowering of rates. Following such increase in business the retail dealer will be enabled to sell the lumber at a less percentage than possible at present.

We, as residents of this country and having an established business in it, are greatly interested in its welfare, and knowing that the advancement and development of the country is of paramount importance to your company, seek to impress upon you the unfortunate position and the hard times now prevailing, and so much to be deplored; and while we may not claim to be worse off than the world generally, this is the position of it that more closely affects our well being. We feel with the natural advantages of the country and the assistance you can so readily extend in the way of cheaper freight, matters can be much improved.

There can be no doubt that high cost of lumber is of great consideration with the farmers in locating settlements, and the incoming stranger is most likely to at once feel the depressing influence upon him in the lack of proper buildings so general throughout the country, and which are so essential in good farming.

We as a retail association feeling a like interest with your railway company in the advancement and settlement of the country, are prepared to guarantee any reduction made by you (which we feel sure will be made upon giving this matter your valuable attention) in freight rates that the consumers shall receive the full benefit of such reduction in the cost of lumber to them.

At present we are withholding all orders for lumber that can be avoided and should your decision in the matter be against the lowering of the freight rates, it will be necessary to continue the curtailment of our trade.

Hoping to have an early reply from you.

Yours respectfully,
President.

It may be interesting to the public to note that ten years ago the association was as alive to the public requirements and necessities as the C.P.R. appears to be to-day, and strangest of all were appealing to this same C.P.R. to reduce rates, which seemed to be excessive and which were in consequence retarding the progress of the country, and this, too, without prospect of profit to themselves, except in the advancement of the North-west.

QUESTION OF SUPPLY.

About a year ago the C.P.R. imagined they saw impending disaster unless they undertook to see to it that a stock of lumber was forthcoming sufficient to supply the incoming settlers, as set forth in the following letter written by Mr. Peters, Assistant Freight Traffic Manager, and addressed to Isaac Cockburn, Secretary.

WINNIPEG, Jan. 16, 1903.

Isaac Cockburn, Esq., Secretary Western Lumbermen's Association.

Dear Sir—Referring to our general conversation on the subject of the movement of lumber into the North-west Territory before trails break up so as to enable newly-arrived settlers to obtain immediate supply of lumber, and get it out to their locations without delay.

I am glad to learn that your association has realized the importance of this, and that you have decided to make an extended trip through the district referred to, for the purpose of meeting the dealers at all points and impressing upon them the necessity for immediate action. I will have our travelling freight agent accompany you and render all the assistance in his power.

The position this company take, is that the early movement of lumber as above explained is a necessity, not only in our interests, but in that of the country at large, and we feel that should the dealers at the different points decline to order for immediate shipment from the different mills for reason that the lumber may not be sold immediately on its arrival, that we would be compelled to take some other means to get the lumber into the district. We do not desire to interfere in any way with the arrangements of your association, or the business of your members, and I sincerely hope that we will not be compelled in any way to do so, but as I have already said, the lumber must be moved at once. I need not say to you that on the opening of navigation our power and rolling stock will be severely taxed to handle the large movement of grain to the lake front, and it will then not be so easy for us to supply cars at the different lumber mills as it is at present. This is a further reason why lumber should move immediately.

You brought up the question of whether this company could offer any inducement for this early movement in the matter of freight charges, and I have said to you, while we do not want to change our regular system in that respect, we would be prepared to consider a reasonable proposal in that direction, provided satisfactory protection would be afforded us, and that we should not lose our lien upon the lumber. In other words, at points where large quantities are required and the dealers are not financially able to immediately pay our charges, and take delivery of the lumber, we might devise some means of allowing them to unload the lumber on our property to remain in control of our agent on the understanding that charges would be paid within a period of 30 days after arrival, if delivery was not taken and charges paid prior to that period. Our travelling freight agent, Mr. Miles, will consider any

proposal of this nature and report the same, when it will receive our immediate consideration.

It is of course understood that the lumber manufacturers would agree to give corresponding assistance to the dealers in the matter of longer dating on their bills. Let me urge upon you the importance of making your trip on the earliest possible date, and wishing you every success on same.

Yours faithfully,
(Signed) F. W. PETERS,
Assistant Freight Traffic Manager.

Mr. Cockburn duly reported to the directors as follows :

WINNIPEG, Feb. 10, 1903.

To the President and Directors.

I have to inform you that in pursuance of your directions to me, I proceeded on the 23rd of January, along with Mr. Miles, C.P.R. Travelling Agent, to attend meetings of the dealers which I had called for the purpose of bringing before them the purport of a letter received from the Canadian Pacific Railway, urging the importance and necessity of the dealers throughout placing their orders for lumber at once for spring requirements.

Meetings were held as follows :—

Moosomin, the dealers there and outlying districts.

Wolseley, the dealers there and outlying districts.

Regina, the dealers there and outlying districts.

Moose Jaw, of the members there and outlying points, and dealers on the Soo line.

Prince Albert, of members on line of Prince Albert Railway and the manufacturers there.

Calgary, of the members for Alberta. At this meeting deputations were appointed, one to visit the manufacturers on the line of the Crow's Nest Pass Railway, and one to visit the manufacturers of the coast, both for the purpose of placing this matter before them, and to urge them to take tangible action in assisting the proposed movement.

In addition to the above meeting, I subsequently visited the dealers on the line of the Souris Railway, placing before them the desirability of ordering at once their spring requirements.

It was urged at all the meetings the necessity and advisability of early placing orders for prompt delivery for a sufficient stock of lumber to meet the requirements of the early spring trade, and any exceptional demand likely to arise through incoming settlers.

(Signed) ISAAC COCKBURN,
Secretary-Treasurer.

The directors of the association consider that their first duty is to the public. They therefore insist upon their members at all times keeping a sufficient stock of lumber to meet the public demand in their locality. With this object in view, they addressed the following circulars to their members as early as July, 1902 :

WINNIPEG, July 29, 1902.

To the Active Members of this Association.

Information having reached the directors that many retail dealers do not keep a stock of lumber commensurate with the requirements of the trade.

At the meeting of the directors just closed, a motion was passed instructing me to issue the following intimation :

"That in all cases where it is found that an inadequate stock of lumber is kept by an active member to supply the ordinary demands of trade at such point, any application for membership, therefore, will receive due consideration by the board of directors."

Yours truly,
(Signed) ISAAC COCKBURN,
Secretary-Treasurer.

WINNNPEG, Feb. 4, 1903.

Dear Sir—There exists a good deal of anxiety as to the sufficiency of lumber available for the incoming spring requirements, and in order that it may be more closely estimated, I take the liberty of asking the retail dealers to furnish me with the quantity of lumber held in stock on the first of the present month.

I shall be obliged by you sending me the quantity of lumber you had in stock on that date, and also about how much more lumber you will require for your spring trade.

Yours truly,
(Signed) ISAAC COCKBURN,
Secretary-Treasurer.

The result of the secretary's trip was that he convinced the dealers of the importance of having their stocks in early, and they placed their orders accordingly. He also secured the co-operation of the manufacturers to the extent of allowing additional time to pay for the early shipments. The only party who failed to carry out their part of the arrangement was the C.P.R., as shown by the following letters from Mr. Brown :

SASKATOON, Feb. 24, 1903.

Isaac Cockburn, Esq., Winnipeg.

Dear Sir—In reply to yours of 4th inst., my absence at the Coast prevented my sending you an earlier reply. My present stock is three cars shingles, 400,000 feet of lumber and stock of sash, doors, etc.

I have just returned from the West, where I have been for the purpose of seeing for myself who have the material. Firms were accepting orders and promising prompt shipment, and nothing was coming in. I am glad to say I have procured about three-quarters of a million feet. This, with my stock on hand, I am satisfied, even if mine were the only yard here, would be sufficient to supply demand until Prince Albert mills were running. If C.P.R. were only as prompt in delivering the cars as they are in urging us to place orders, it would be more satisfactory. I cannot help thinking that shippers, on account of heavy rates, and long delays in delivering to these outside points, prefer to ship to points on main line, especially where demand is in excess of supply. Yours faithfully,
(Signed) A. L. BROWN.

SAKATOON, March 19, 1903.

Dear Sir—I have been told to-day by a traveller that we are reported to be starving for lumber up here. This to a certain extent is true. There is no person that I know of who cannot get what he wants, but unless the railway company will bring material in, we shall certainly run out. I think it time that complaint was made as to the serious condition of matters here. All the early part of the winter the C.P.R. were saying and urging us to buy material. We have bought it, and it is being and has been shipped, yet a car coming in here is an exception. Merchants are suffering for want of groceries. Coal has been out, until yesterday, for three weeks. I am suffering loss by firms refusing to allow me discounts as goods are not paid for within the 30 days ; yet if I pay for them it is as likely as not that I may not receive them for another 30 days, and yet I suppose if there is any shortage the blame will be laid on us.

I saw myself, three weeks ago, cars in Regina yard for me that had been shipped some time, probably they are there yet. They certainly are not here. Can you do anything at your end ? I have written to headquarters myself, but it seems to do no good.

Yours truly,
(Signed) A. L. BROWN.

SASKATOON, March 20, 1903.

Dear Sir—I wrote you yesterday with regard to the disgraceful service we are getting in regard to delivery of cars of lumber or anything else. I wrote to Winnipeg some time ago, and have written to-day to the general superintendent.

Would this matter of delay be within your province after all the fuss they raised about our getting in a supply of material ? From present indications we are in a hopeless muddle. What it will be later on is hard to say.

We had a coal famine for three weeks only relieved yesterday. Sugar and such like articles have been an almost unknown quantity for weeks. I am told there are close to 150 cars at Regina awaiting to come up along this road, and the number increasing all the time.

I thought it as well to advise you of this matter in time, so that if any shortage of lumber should occur, there is no blame to be attached to us here. The loss to me is serious. I am losing cash discounts. Money was paid out weeks ago on cars prepaid to Regina, and I have not the lumber yet.

Yours faithfully,
(Signed) A. L. BROWN.

Referring to the above Mr. Brown having failed to get his lumber forward, took the train at Saskatoon and came on to this city to endeavor, if possible, to get the authorities here to give such instructions as would be the means of the lumber being sent on to him, without further delay. When Mr. Brown reached here he called upon Mr. Cockburn, and stated the position that he was placed in through the detention in transportation of his lumber. Mr. Cockburn and myself called upon Mr. Lanigan and stated the unfortunate circumstances in which Mr. Brown was placed through the non-arrival of his lumber. Mr. Brown on his way here, and while at Regina, in looking through the yards discovered that several cars of his lumber were lying on a siding. He at once drew the attention of the C. P. R. local agent there to it, and was told that it was out of their power to get the cars so shunted as to take them on by the outgoing train. Mr. Lanigan on being told of this fact gave us the strongest assurance that Mr. Brown's lumber would be sent forward to Saskatoon at once. Mr. Brown returned home feeling that he would certainly have some relief in this matter ; but to the surprise of myself and Mr. Cockburn, some days afterwards a telegram received from Mr. Brown informed us that the lumber was still held at Regina. This telegram was taken to Mr. Lanigan as a reminder that his promises had not been fulfilled.

If the railway company, after lumber is manufactured and loaded on cars, are unable to get it to its destination within a reasonable time, what chance would there be for the early spring settler to secure his lumber when he required it, provided the same company undertook to supply the same demand from the same tree ? It would appear to the outsider that the company should first energetically address itself to providing an efficient transportation service, and when that is secured, undertake other industries that promised profit or pleasurable employment.

REGARDING PRICES.

In order that the public may see where their money goes, I append hereto statements of four cars of lumber imported by me over the C. P. R. These cars are not selected on account of the small profit shown, but because they cover a wide range of material. I invite Mr. Whyte to call at my office, when I shall be glad to let him verify these figures, and the statements of 40 or 50 other cars which show similar results.

STATEMENTS.

C. P. R. car 35286, ex Vancouver, September 19 :

14,262 ft. of 1 and 2 flooring, at $35	$499.17
8,217 ft. of 3 and 2 flooring, at $30	246.51
	$745.68
Less freight paid; (this car was matched flooring, and kiln dried)	$178.40
	$567.28
2 per cent. discount	11.35
Net returns to shipper	$555.93
Cost to retailer dealer here	745.68
Cost to consumer of 14,262 ft. at $44	627.92
8,217 ft. at $38	312.24
	$940.16
Less 12½ per cent. discouht	117.52
	$822.64
Net balance for dealer to cover handling, teaming, office expenses and profit	$ 76.96
Manufacturer at Vancouver gets per 1,000	24.73
C.P.R. gets for freight	7.94
Retail dealer gets	3.42
Cost to consumer	36.09

Car 45964 ex Vancouver, Oct. 7.

23,366 ft. 3x14, at $21.70 net.,	507.04
Less freight paid	278.00
Net return to manufacturer	229.04
Cost to retail dealer	507.04
Sold to consumer at $22.20	518.73
Balance for dealer to cover office expenses and profit	11.69
Manufacturer at Vancouver gets per 1,000	9.80
C.P.R. gets for freight	11.90
Retail dealer gets	50
Total cost to consumer	22.20

Car 144018 ex. Vancouver Sept. 24.

20,451 ft. timber net	463.31
Less freight paid	248.80
Net return to manufacturer	214.51
Cost to retail dealer	463.81
Sold to consumer	512.31
Balance for dealer to cover office expenses and profit	49.00
Manufacturer at Vancouver gets per 1,000	10.48
C.P.R. gets for freight	12.17
Retail dealer gets	2.39
Cost to consumer	25.04

Car 64484 ex. New Westminster, June 4.

2,880 ft. at $24	$ 69.12
12,936 ft. at $25	323.40
	392.52
Less freight paid	166.00
	226.52
Less 2 per cent. cash discount	4.52
Net return to manufacturer	222.00
Cost to retail dealer	392.50
Sold at—	
2,880 ft. at $27	77.76
12,936 ft. at $33.50	433.35
	511.11
Less 12½ per cent	63.89
	447.22
Net balance for dealer to cover all handling, teaming, etc., and profit	54.72
Manufacturer gets per 1,000	14.03
C.P.R. gets for freight	10.50
Retail dealer gets	3.46
Cost to consumer	27.09

The retailers' percentage of profit can easily be ascertained. It would be interesting to know what percentage of profit the C.P.R. made on the cost of hauling the above four cars from Vancouver to Winnipeg. It is quite apparent the man who pays the freight is not the man who robs the public.

One Copy, Weekly and Monthly, Six Months, in advance.. 50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

LAW IN THE LUMBER BUSINESS.

A decision recently given by the county judge at Barrie, and confirmed by the Court of Appeals, contains some statements which do not meet with the approval of the lumber trade, and which, if followed in practice, would mean a reversal of existing custom. The judgment, which will be found on another page, follows precedent in so far as it declares the method which should have been pursued, but the reasoning leading up to the conclusion would seem to be somewhat erroneous.

The plaintiffs sold to the defendant a carload of tamarac f.o.b. cars Severn Bridge, the stock to be 2x6 inch and up. The evidence showed that the lumber was not all 2 inches in thickness, but that it varied from 1½ inch to 2½ inches, also that some of it was wedged stock, being about one-half inch thicker at one end than at the other. On these grounds the defendant refused the lumber and suit was brought by the plaintiffs to recover payment for same.

There seems to be no doubt that the lumber supplied was not according to specification, but the defendant did not follow the proper course in refusing to accept the lumber. He should have unloaded and inspected same at destination and paid for what was up to contract, at the same time notifying the shippers regarding the quantity rejected, and advising them that it was held at their risk, and that unless taken away by a certain time it would be sold at the best price obtainable. It would then have been in order to have entered an action for such damages as accrued in filling the order for which the lumber was intended. The result of this law is that a buyer may, without any negligence on his part, he forced into a law suit, but as the interests of both shipper and consignee have to be considered, this law is believed to be on the whole the most equitable.

Judge Boys says : "I find 2 inch in the trade includes a variance in thickness of anything one-quarter of an inch below or above 2 inches." That this is the custom in the trade will be news to the generality of lumbermen. Lumber 2 inches in thickness is intended to be capable of dressing to 1¾ inches, so that if the lumber were furnished 1¾ inches in thickness it would when dressed be only 1½ inches. No customer would be willing to accept 1½ inch dressed lumber for flooring or other similar purpose when the order called for 1¾ inches. The inspection rules do not permit any such variance as ½ inch. If such were the case, there would be very little two inch lumber on the market, as manufacturers would find it very profitable to cut 1¾ inch and sell it as two inch, and so with other sizes.

Judge Boys further says: "In cutting tamarac allowing a variance of this kind is particularly required, as the trees are small and it is difficult to prevent springing on the mill carriage." Tamarac logs are not considered difficult to saw and especially where the lumber is above 6 inches in width, as in this case. Uneven sawing is most likely to be caused by inferior mill equipment, the dogs not being in proper condition to hold the logs up to the saw. Elm and several other timbers are much more difficult to saw evenly than hemlock.

THE WESTERN LUMBER SUPPLY.

The Commission appointed by the Dominion Government to investigate the charges that a combine existed for the purpose of obtaining extortionate prices for lumber sold throughout Manitoba and the Territories were unable to find any evidence of such combine, and after one or two preliminary sittings adjourned. In view of this fact the announcement made within the past month that the Canadian Pacific Railway has under consideration the erection of a large saw mill for the purpose of breaking the so-called monopoly was not taken seriously. The statement of the company's plans, however, is attributed to Mr. White, second vice-president, and should, therefore, carry some weight, particularly as a denial of the statement has not, so far as we know, been made.

That the Canadian Pacific Railway should show such a keen interest in the welfare of the farmers of Manitoba and the Territories is a paradox. If their policy in the past had been tempered in the slightest degree by this sentiment, the public might accept the statement with some credence. However, we do not think the lumber trade have much to fear from competition by the C.P.R. They have heretofore ventured into the lumber business with doubtful results. If our recollection serves us, the large mill in the Crow's Nest Pass, equipped with expensive machinery, was dismantled after being in operation for a year or two.

The statement by Mr. Sprague, published elsewhere in this number, shows that the Western Retail Lumbermen's Association have had the interest of the consumer at heart more than has the Canadian Pacific Railway. One of the first steps taken by the Association was to endeavor to obtain a reduction in the freight rates on rough lumber, which was successful, and was followed by a reduction in the first cost by the manufacturers, both of which reductions were given to the consumers. By thus lowering the cost of lumber a stimulus was given to consumption; farmers who had previously lived in sod houses were encouraged to build comfortable frame homes. The Association was fully alive to the necessities of the public and of the western country, while the C.P.R. showed no such philanthropy as they now seem anxious to be credited with.

Coming to later events, it will be remembered that about one year ago the railway company and the association agreed upon a plan which, it was thought, would prevent an impending famine in lumber at many western points, the plan being that dealers should place their orders early so that the railroad company might be able to deliver the lumber before the busy season. The scheme might have worked out satisfactorily had not the C.P.R. failed to carry out their part of the bargain. Dealers who placed orders early, as requested, were in no better position when the spring trade opened than if they had followed their usual custom, the reason being that the railway company did not transport the lumber as agreed, but in some cases at least allowed the cars to remain on sidings for weeks. Mr. Avery, a dealer of Austin, Man., tells of shipments which were a month coming from the coast. Here again was lacking an interest in the welfare of the consumer.

The legitimate business of a railway is the transportation of goods, and experience has demonstrated that the Canadian roads have their hands full in attending to this alone. If the C.P.R. is anxious to improve the position of the western farmer, this might be done by a reduction in the exorbitant freight rates which are frequently charged.

EDITORIAL NOTES.

An important decision affecting hardwood flooring was rendered recently by a judge of the United States Circuit Court. The suit was brought by the T. Wilce Company, of Chicago, who claimed that all manufacturers using the present method of making end-matched maple flooring were infringing on patents owned by them. The court in the first decision upheld the validity of the patents, but upon the presentation of new evidence the case was reopened before the same judge, who set aside the original verdict and gave judgment that the improvements claimed could not be patented. It is expected that the plaintiffs will carry the case to the United States Court of Appeals.

During the past five years there has been a plethora of investment in stocks and shares of all kinds, in some cases with very unsatisfactory results. Building, on the other hand, has not received ordinary attention from capital, splendid opportunities for profitable investment

in this direction being overlooked. A reversal of these conditions may be expected in the next few years, with the result that there will be a more plentiful supply of dwellings and other buildings to meet the requirements of the rapidly growing population of this country. Increased investment in building will do much towards continuing the present prosperous conditions. It will also create a heavy demand for lumber and shingles.

We might suggest to the lumber manufacturers of British Columbia that, with a little more effort and preseverance, they could market a larger quantity of lumber in the East. The scarcity of hardwood timber is becoming more pronounced each year and consumers are constantly on the look-out for suitable substitutes. The large implement factories, such as the Massey-Harris Company at Toronto and Brantford, the International Harvester Company at Hamilton, the Frost & Wood Company at Smith Falls, and others, have been large users of hardwoods, and especially ash. The supply of ash is now so small that substitution is inevitable, and for many purposes for which it is used the Douglas fir of British Columbia would probably be found suitable. It can, we think, be laid down in Ontario cheaper than the native ash, and as the supply is well nigh unlimited, consumers would no doubt be glad to adopt it were its characteristics more generally known.

In view of the large number of planing mill men and general woodworkers who have become subscribers to the CANADA LUMBERMAN, it has been deemed advisable to put in a department for them wherein will be found articles pertaining particularly to the working up of lumber into sash, doors, mouldings, and other manufactured products. The department appears for the first time in this issue, and in it, in response to an inquiry, a method of manufacturing spiral mouldings is explained at some length and diagrams given. Similar practical articles will appear each month. That the space at our demand may be utilized to the best possible advantage, we invite and would appreciate suggestions from woodworkers as to subjects which might with most profit be discussed from time to time. Readers are also requested to contribute articles for publication on pertinent subjects. By so doing they will encourage the interchange of ideas and assist to render this department profitable to themselves and others. We hope to receive several communications for our March number.

JUDGMENT IN A LUMBER SUIT.

Messrs. Mickle, Dynent & Company, of Barrie, Ont., were the plaintiffs, and J. W. Collins, of Toronto, the defendant, in a suit of considerable interest to the lumber trade in which judgment has recently been given. The plaintiffs shipped to defendant a car load of tamarac for flooring, specified in the plaintiff's price list to be "2x6 and up," but which the defendant refused on the ground that the lumber was carelessly sawn, being badly wedged and uneven in thickness, and some boards not over 1½ inches in thickness. The lumber was refused and the plaintiffs sued to recover. The case was tried in the County Court at Barrie before Judge Boys, who gave judgment in favor of the plaintiffs. The defendant appealed to the Divisional Court at Toronto, and the first judgment was sustained. The judgment of the County Court is given below:

MICKLE, DYMENT & CO. VS. J. W. COLLINS.

I think this case is covered by Dyment vs. Thompson, 9 O.R. 566; 12 O. App. R. 659; 13 S.C. 303. The original decision in that case in the Local Court was upheld in all our Courts, and it may be considered the leading case on the subject in Ontario. There the lumber retained its distinctive character of lumber and half was not open to objection. Hagarty, C. J., in 12 Ont. App. at p. 662 said: "It may of course be conceded that the defendant was not bound to accept any parcel of goods which had lost such character—the lumber became his (defendant's) property to all intents and purposes as soon as shipped. He would have to bear the loss of destruction in course of transit. Its delay on the road, or its destruction in transit would hardly be an answer to the plaintiff's demand of the acceptance. All these considerations seem to me to point to the conclusion that if the defendant did not choose to have his interest protected by having his agent to inspect the shipping, he is to be left to his cross-action or counter-claim to recover any damages consequent on the sending of any inferior quality of lumber." And the C.J. quoted from Campbell on Sales (1881), page 388, as follows: "The rationale of the matter may be thus put: In regard to faults which are latent at the time of delivery, or where there is under the circumstances no opportunity of inspection at or previously to delivery, the purchaser may take delivery, relying upon the tender (that is, the offering of the goods) as a representation that the goods are according to description, and in that case his acceptance is not necessarily final, but may be recalled upon discovering the defect, provided he has made examination as soon as is reasonably practicable, and that he notifies his rejection immediately on making the discovery." And after quoting from Benjamin on Sales 3rd Amer. Ed. see 703, citing Pease vs. Copp, 67 Barb. 132, for the proposition that "if goods are to be delivered by vendor at a certain place, it is the vendor's duty to have some person at the place of delivery to inspect it before it is transported to some other place," the C.J. then states: "It is not easy to deduce a clear rule from the very large number of authorities on the sale of goods, either on a present or executory contract as to the right to reject or rescind the contract. I can only decide this case on its particular facts, and on these facts I arrive at the conclusion that after the shipment on the railway of lumber answering generally the kind of lumber contracted for, the vendee had not the right to reject any number of car loads, because of the inferiority in quality of a portion in each load, but was left to his claim for damages, p. 665."

BURTON, J. A., said "By the terms of the contract between the parties the seller of the lumber was to ship to the defendant f.o.b. the cars at the latter's expense," and at p. 668 his Lordship continues, "The mere defect in quality in other respects would not be a ground for rejection unless the article was entirely unmerchantable, and the defendant, I think, has not made out a case to show that the contract, that is, a contract for plank of the dimensions specified, has not been substantially carried out, but I am of opinion further that the learned Judge at the trial took the proper view of the contract when he held that the inspection was to take place in the plaintiff's yard."

PATTERSON, J. A., stated the terms of the contract to have been "1st. The thing to be supplied, which was plank of red and white pine, 18 feet long, 2 in. thick and any width from 6 to 12 in., and, 2nd, the quality of the article, which was to be the same as that supplied the year before." "The delivery was to be on board the cars and not at any place to which the defendant might order the lumber to be sent," p. 669. Much of the contention of the defendant for his right to reject at Hamilton a number of car loads of the lumber while he accepted other loads was based upon the view of the contract that the property did not vest in him until he had an opportunity of inspecting it at whatever place he directed the plaintiff to send it to. I do not intend to discuss this palpably extravagant contention," p.p. 669-670. Then if the article delivered was the article agreed to be delivered the dispute is narrowed to the quality and place of inspection and is not so material as it seemed to the litigants at one time to be; the quality is said to have to a certain extent fallen short of what it should have been."

The Court held that the defendant's only remedy was in damages for the inferiority of the article delivered, and on appeal the Supreme Court affirmed the judgment of the Court of Appeal, holding that under the circumstances of the case, Thompson, the defendant, had no right to reject the lumber, his only remedy for deficiency being to obtain a reduction of the price, or damages for non-delivery according to the contract.

SIR W. J. RITCHIE, C. J., said: "Of course, if the article shipped was of an entirely different character, the case would be very different, but here the description was substantially satisfied, which resolves the dispute into one of quality."

TASCHEREAU, J., said: "I am of opinion that this appeal should be dismissed upon two grounds, 1st, because, under the circumstances as disclosed by the evidence, the property in the goods passed to the vendee at the time of shipment; 2nd, on the ground that the appellant having received, paid for and accepted a substantial part of the goods, his right of rejection was gone."

GWYNNE, J., stated: "That defendant pleaded a right to reject lumber forwarded to him by the plaintiff under a contract of purchase upon the ground that the lumber so rejected was not sound, good square edge stuff, fit for car flooring, which, as he said, was the lumber contracted for. The defendant in that case claimed the right of rejection of the lumber, which he rested, as Judge Gwynne stated, chiefly upon the contention that the lumber was purchased for a special purpose, namely, for car flooring, and for which, as was contended, it was wholly unsuitable, but which purpose was not expressed in the contract as it was found to be in the opinion of the learned Judge."

I have quoted so largely from this case as the facts of it appear to me very similar to the facts of the case I have now to deal with. Here the lumber was offered for sale as being at Severn Bridge by a "Stock List" issued by the plaintiffs from Barrie and the defendant wrote them that he had received this stock list and he saw they had 17,000 feet of 2x6 and wider tamarac at $14 per M. Severn Bridge, and that they could ship him a car as soon as possible of this tamarac, and stating that he would also take 4,000 feet 3x6 to 12" pine M.C. at $10.50, and that the plaintiffs could make up the car with 2x6 and wider tamarac and spruce at $14.00 per M. This was on March 6th, 1903, and on March 7th, 1903, the plaintiffs replied stating "We expect there will be enough of the spruce and tamarac to make the two cars and we will lay out the balsam." The two cars were sent but apparently on different days, and the one containing the pine with some tamarac and spruce appears to have been sent before, or at least, arrived in Toronto, before the other. No objection was raised to this load, but when the car of tamarac arrived, the whole carload was refused acceptance, on the ground of the lumber being badly sawed, some pieces being, it was claimed, 1½ inch, others 1¾ and 2 inches and 2¼ and 2½ inches in thickness, and not even at both ends or at both sides.

On the evidence there is no doubt some pieces were not according to the contract, but they were not so numerous as to warrant the rejection of the whole car load. These faults were not latent, but could be easily seen by inspection of the carload—the car was an open flat car.

The tamarac was to be 2 inch plank, and from the evidence of experts given at the trial, although contradictory, I find 2 inch in the trade includes a variance in thickness of anything one-quarter of an inch below or above two inches. This arises from the impossibility to cut all boards exactly of one thickness, and in cutting tamarac allowing a variance of this kind is particularly required as the trees are small and it is difficult to prevent springing on the mill carriage.

There is no doubt in my mind that this lumber was not anything so different from what was ordered as to justify a refusal of the whole car-load, and as the sale took place at the mill at the Severn Bridge, where the delivery also took place, and as I find the lumber—although a small portion of it was not up to what was ordered—was still substantially according to contract, it should have been accepted, and the defendant should have counterclaimed or have brought a separate action for the culls and defective lumber. The judgment will be for the plaintiffs for the amount claimed with costs. Under the pleadings I do not see that I can make in this suit any allowance to the defendant by way of set-off or otherwise, but if it should be necessary for the defendant to bring an action to recover a fair allowance for the culls and defects in the lumber and my consent thereto should be necessary it will be granted.

Another point in this case must have been considered if the one it has turned on had failed the plaintiffs, that is, as the total order was loaded on two cars, and one carload was accepted, whether that did not prevent the defendant refusing the second carload and leave him to a cross-action for any claim he had.

"WM. BOYS,"
Junior County Judge.

CHANGE IN MANAGEMENT.

Mr. Harlan P. Hubbard, who opened a sales agency at Toronto, Ontario, a little over a year ago for E. C. Atkins & Company, in order to serve their growing trade in Canada to better advantage, has been called to a sphere of greater usefulness with his firm and made general superintendent of the immense factories at Indianapolis, Indiana. Mr. Hubbard was wonderfully successful in his work in Canada, but his superior qualifications in the practical end of the business of necessity resulted in his advancement. He began his new duties January first, being succeeded in the old by Mr. C. D. Ten Eyck, of Detroit, Mich., a

MR. C. D. TEN EYCK.

gentleman of fine address and pleasing personality, who will undoubtedly meet with a cordial reception from the trade and continue the work so auspiciously begun.

POINTERS ON THE HARDWOOD EXPORT TRADE TO UNITED KINGDOM.

BY "EXPORTER."

At this time, when lumber dealers are looking forward to the coming season and thinking how they can improve their position, to those who have not yet tried the export business as a means to this end, and may now think of doing so, I would like to offer a few suggestions, which may prevent beginners from making some of the mistakes usually made by those who enter upon this line of business for the first time, and which often result in dissatisfaction to the importer and disappointment and loss to the exporter. These suggestions may also be found useful to some exporters who are looking around for means to make the most of this now keenly competed for trade, and who, either from carelessness or want of appreciation, have overlooked some of the points given.

First of all, to those who are only now thinking of trying the export business, the question arises "For what charges am I liable on the shipments I send forward?" To answer this it is necessary to understand the different terms of sales. There are shipments on contract and consignment shipments. Goods shipped on contract are usually sold on c.i.f. terms, that is, the shipper has to pay freight and insurance to destination, the cost of both of which items can be ascertained at shipping point. Besides these charges there is a discount of 2½ per cent. and the brokers' commission, both charged on the gross proceeds of the goods, to be allowed for both on contract and consignment shipments. Goods that are not shipped or sold on c.i.f. terms incur dock charges, which vary at different ports and which it is not my intention to deal with in this article.

It is always best for anyone who intends exporting regularly to establish distinguishing quality marks for his shipments—marks which will become familiar among importers—and to deal only through one agent in each port or district, to avoid competition among his own shipments. A sub-mark can be used to distinguish each shipment. To emphasize the advantage of having recognized marks, I might state that hundreds of carloads of lumber are contracted for annually by mark alone. Of course, it is always necessary to keep the grades represented by these marks of a uniform standard.

The care of shipments is a point which receives more or less attention from all shippers and shipments of lumber are often cleated on ends, thin boards bundled, &c., but in regard to the bundling, there are one or two points which are worthy of mention. The same number of boards should be put in each bundle and bill of lading made to read a certain number of bundles each containing so many boards. Almost invariably a certain proportion of the bundles become loose in transit, and in the case of bills of lading calling for a certain number of bundles only, the ship agents are only bound to deliver that number of bundles, so that all that it is necessary for them to do to repudiate a claim for shortage, in a case where some of the bundles have become loose, is to maintain that the loose pieces delivered represent the contents of the bundles short delivered and that is being done every other day. On the other hand, if bill of lading is worded as suggested above, the shipper is protected in a case of that kind.

The best material to bundle with is probably a good strong twine. Hoop iron and wire are objectionable because they are more difficult to unloosen and sometimes injure the boards. Small wood, such, for instance, as squares 3 inch and under square or 36 inches and under in length, should be bundled, not only to protect them, but to save extra expense in handling such small pieces.

In taking out bills of lading there are several important points to be thought of. Through bills of lading are usually claused "more or less" or something to that effect, which relieves the carrier of any responsibilty in case of shortage. When bills of lading are worded in that way, although railroad companies are not responsible for shortage in quantity delivered to ship, ship agents are responsible for any further shortage that may occur in deliveries from ship. To recover the latter shortage, it is necessary to present ships' receipts, and these should be asked for from railroad companies and be sent on to shipper's agents to enable them to check deliveries and file claim if necessary. Bills of lading which do not contain any of these clauses for the protection of railroad companies in event of shortage are called "clean" bills.

Another point to be noticed is to get separate bills of lading for each shipment that is to be delivered separately, as even although marked differently, ship agents are not responsible for separate delivery of goods shipped on one bill of lading. Goods should be consigned direct to brokers or at least it should be stipulated in bills of lading that they are to be notified, so as to avoid the possibility of goods arriving unknown to the brokers. Documents should also be sent forward promptly, as in these days of quick transport, it is not an uncommon occurrence for the goods to arrive before the documents necessary to obtain delivery of them.

As to grading, there are no hard and fast rules. Prime or first quality wood corresponds with firsts and seconds and the lower grades with American classification, although a good deal depends upon the ideas of the buyers, which we fear are inclined to fluctuate with the state of the market.

LUMBER INSURANCE AT REDUCED COST

Pennsylvania Lumbermen's Mutual Fire Insurance Co.

Branch Offices:

IMPERIAL BUILDING. MONTREAL.
22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED

By the Car load, White and Rim Ash Logs cut into lengths of 4 ft. 6 in. or multiples, 6 in. and up in diameter. To be scund clean timber free from knots. State price per cord.

HURDMAN & ELMITT,
Ottawa, Ont.

WANTED—CONTRACT TO CUT 10 TO 12 million feet logs during season 1904, by up-to-date mill on Georgian Bay; lake and rail shipments. Apply Box 97, care CANADA LUMBERMAN.

FOR SALE

FACTORY FLOORING

KILN DRIED BIRCH, ABOUT 60 M. Box 442 CANADA LUMBERMAN.

CAPITAL WANTED FOR LUMBER BUSINESS

The advertiser having under negotiation the purchase of a profitable (going) lumbering property requiring $300,000 capital, of which he can supply one-third, invites correspondence from parties who can furnish part or all the balance. Address Box 111, CANADA LUMBERMAN.

WANTED—TO CONTRACT WITH PORTABLE Saw Mill Man to cut and deliver on the shore of Georgian Bay from one to two million feet of lumber a year for next three years. Also wanted to buy a small Steam Barge suitable to carry lumber and to tow saw logs. Apply to GODERICH LUMBER CO., Goderich, Ont.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

LOGS WANTED.

FIVE TO TEN MILLION FEET WHITE Pine Logs on Georgian Bay. Box No. 143 care CANADA LUMBERMAN.

WANTED — EXPERIENCED SAWMILL forman to take charge of steam mill; must be thoroughly reliable and understand management of men, inspection and manufacture of dimension timber and shingles. Box 114 care CANADA LUMBERMAN.

WANTED—10 CAR LOADS OF COMMON and Better White Winter Cut Basswood, cut 1⅛" from the saw or good plump 1" when dry; will take it 3" wide and up, 3 ft. long and up; can ship in car lots from any part of Ontario or Quebec. Address Box 84, CANADA LUMBERMAN.

WANTED—LUMBER OR SHINGLE SAWING

FOR ONE OR MORE SEASON'S CUT; CAPACITY 20 to 30 M per day; situated on the south-east of the Georgian Bay. Shipments by rail or water; good harbor for logs. For further particulars address Box 16 CANADA LUMERMAN.

BUSINESS CHANCES

Interest for sale in running British Columbia Saw Mill and valuable timber limits. Ten thousand dollars and upwards required. None but principals. Practical man preferred. Apply Box 112, CANADA LUMBERMAN.

TIMBER LIMIT FOR SALE

BERTH NO. 3 SITUATED ON THE SOUTH-WEST corner of the township of Creelman, comprising lots number 7, 8, 9, 10, 11 and 12 in the first, second and third concessions; good location, Vermillion river running through centre. For terms and particulars apply to W. RYAN, North Bay.

MACHINERY FOR SALE

1 Large 4 Sided Sticker; 1 10" Buzz Planer; 2 Improved Mortisers; 1 24" Surface Planer; 1 Cowan Matcher; 1 Band Saw; 1 Shaper; 1 Turning Lathe; 1 Jig Saw Machine; 1 Tenon Machine, for doors and windows; 1 Tenon Machine for blinds; 1 Mortiser for blinds; 1 Staple Driver for blinds; 2 Saw Tables. A. H. CUMMINGS & SON, Coaticook, Que.

FOR SALE

Large Tract of Timber

In Central Ontario.

THE PROPERTY OF

THE CANADIAN LAND AND IMMIGRATION CO., OF HALIBURTON, (LIMITED).

This company has a large tract of well timbered land about 125 miles northeast of Toronto. There are large quantities of Cedar, Hemlock, Spruce, Balsam, Basswood, Cherry, Birch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads. The company are prepared to sell this timber in blocks ranging from 2,000 to 10,000 acres, or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and looking for a new location.

Maps and plans and further particulars can be had by applying to

W. H. LOCKHART GORDON,
Managing Director,
157 Bay Street, Toronto

FOR SALE—300 TAMARAC PILES 30 FEET long, 9 in. and over at top end; immediate or spring delivery. Box 212, Burk's Falls, Ont.

WANTED — 1" CULL, SOFT ELM AND Black Ash, also all kinds of Dry Hardwood Lumber, common and better. R. E. KINSMAN, Hamilton, Ont.

WANTED

A GOOD SECOND-HAND ALLIGATOR. Apply, stating length, age, etc., to RIORDON PAPER MILLS, Limited, Wood Supply Department, Hawkesbury, Ont.

WANTED BY YOUNG MAN, CANADIAN, thoroughly conversant with the lumber business, having had large experience both in office work and grading of lumber for export trade, position with large lumber company as manager, or buyer and seller. Could place the cut of large manufacturer to advantage with European buyers. References from present employers. Address Box 55, CANADA LUMBERMAN.

FOR SALE

One 20 H. P. Fire Box Boiler.
One 30 H. P. Horizontal Returned Tubular Boiler.
One 15 H. P. Horizontal Returned Tubular Boiler.
All complete with fittings and tested. Low price for immediate sale. Address ALFRED RUBBRA, Machinery Exchange, 22-24 Victoria Square, Montreal, Quebec.

Mortgage Sale

Of Valuable Mill, Mill Site, Timber Limits, Farm and Dwellings.

Under the powers contained in certain Mortgages, made by John J. Wilson and Josiah Kean (Wilson & Kean), which will be produced at time of sale, there will be offered by Public Auction at their mill premises, Fesserton, County Simcoe, Ont., on WEDNESDAY, FEBRUARY 17TH, 1904, at 2 o'clock p.m., the lands more fully described in said mortgages, but briefly known as follows:

Parcel No. 1.—The J. J. Wilson farm of 65 acres more or less, part of lot 5, Con. 11, Township of Tay, with comfortable dwelling house and outbuildings thereon.

No. 2.—The mill, mill machinory and mill site of "Wilson & Kean," being part W. ½ lot No. 5, Con. 12, Township of Tay, 5 acres more or less, lving between the Midland Railway and Georgian Bay. This mill site is most conveniently situated as to railway and water-ways for shipping and getting in stock, and is well fitted up and in good running order, with a capacity of 20 M per day. Also complete shingle, lath and hoop outfits in connection (engine 60 h.p. and boiler 80 H. Tube, with Cook furnace). On this parcel there are also two comfortable frame dwelling houses, blacksmith shop, store house, stables, offices, etc., all in good order.

No. 3.—A small strip of land 105 feet x 82 feet adjoining the mill site aforesaid, being part S. ½ of west part lot 5, Con. 12, Tay, with sheds used for piling hoops, shingles, etc.

No. 4.—Timber and trees on lots 23 and 24, Con. 6, Township of North Orillia, held under timber contract expiring 1st April, 1910.

No. 5.—W. ½ lot 22, Con. 5, North Orillia (land and timber), 100 acres more or less.

No. 6.—Lot No. 2, Con. 6, Matchedash, 200 acres more or less (land and timber).

The timber lands are said to be well wooded with mixed timbers and are conveniently situated near North River for driving to the mill and other Georgian Bay points.

The properties will be offered subject to reserve bid, and sold en bloc, or in parcels to suit purchasers.

Terms—10 per cent. of price on day of sale, balance within one month thereafter. Further particulars and descriptions will be made known on day of sale, or in the meantime on application to

J. L. ROSS & CO., Mortgagee,
or to
J. C. BROKOVSKI, Solicitor for Mortgagee.

Dated Coldwater, Ont., Jan. 12th, 1904.

FOR SALE—PINE AND CEDAR SHINGLES 16 and 18 inch. T. J. HARWOOD, Mattawa, Ont.

WANTED—A COMPETENT HARDWOOD Culler and Shipper, references required. Box 105 care CANADA LUMBERMAN.

FOR SALE—TEN SETS OF HEAVY LOG and one set of Tank Sleighs, almost new. Lumber would be taken in payment. A. P. EBERT, Wiarton, Ont.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

WANTED—ABOUT ONE MILLION FEET of Hemlock logs, assorted lengths, on shore or in booms Georgian Bay. Quote price and particulars to Box 163, Midland, Ont.

A1 MILLWRIGHT AND ENGINEER wants situation to build or take charge of modern box or saw mill; highest reference. Address Box 99, care CANADA LUMBERMAN.

FOR SALE—100,000 FEET HEMLOCK, 30,000 feet sawn, half one inch, other half two inch. Balance in logs to be sawn as per instructions. Address, "LUMBER" P.O. Box 6, Victoriaville, P. Q.

Veneers Wanted

Birch Veneers 1/30" thick 8" wide, 2'-0", 2'-6", 3'-0", 3'-6" long, to be packed in crates. Hardwood strips ¾," 2¼" wide, 2'-6", rising every 6 inches to 7'-0", 36 pieces of one size to be tied together in a bundle. Box 115 care CANADA LUMBERMAN.

FOR SALE

THREE TUBULAR BOILERS COMPLETE, with all connections and fittings; one 50 horse power, and two 40 horse power. These boilers are in practically good working condition, and can be seen on application at the CONSUMERS' GAS COMPANY'S WORKS, 269 Front St. East, Toronto.

FOR SALE

One Cowan Improved Door Sash and Blind Clamp
One second hand Power Mortising Machine
One second hand 8" 4-side Moulding Machine.

ALFRED RUBBRA,
Machinery Exchange, 22-24 Victoria Square,
Montreal.

CURRENT TRADE CONDITION.

ONTARIO.

The lumber business, is practically at a stand-still. Outdoor work has been rendered difficult by the severe weather and heavy snow storms, and the latter have made it almost impossible to make shipments. The trade generally are now more concerned about prices that are to be asked for new stock than anything else. It is admitted that the outlook is favorable for a heavy local consumption of lumber as soon as spring opens, the demand for buildings of all kinds being still great. In Toronto the increased building operations have not yet provided an adequate supply of houses, and similar conditions exist in many other places. Granting, therefore, that there will be an average consumption of lumber, it becomes a moot question what course prices will take. A

few persons predict a decline in values; others, and perhaps the majority, contend that present prices will be maintained, and by the more optimistic it is predicted that there will be a sharp advance when the season gets in full swing. A strong argument in favor of higher prices is found in the fact that the winter has been unfavorable for work in the woods. Operators have been forced to stop skidding logs on account of the deep snow, and the estimated cut, which was somewhat lighter than the preceding year, promises to be further curtailed from 15 to 25 per cent. by the cause referred to. All kinds of lumber will be affected, but particularly hemlock and hardwoods, which are confined almost entirely to the snow belt. The fact that dealers and consumers are anxious to contract for stock at current prices is an evidence that the probability of a serious log shortage is appreciated.

QUEBEC AND NEW BRUNSWICK.

The only feature to the eastern lumber market is an advance in the price of square and waney timber. Contracts recently closed show an advance of 5 cents per cubic foot over the prices obtained last year. The maximum figures for square pine, 40 to 45 feet, delivered at Quebec, is 55 cents, and for Ottawa waney 65 cents per 18-inch average and 69 cents for 21-inch. Birch timber is also about 2 cents per cubic foot higher and there has been a slight appreciation in red pine. New Brunswick spruce deals wintering at St. John are reported to be slightly weaker. The larger manufacturers, however, are holding their asking prices steady, as they claim that they cannot sell at a lower figure without incurring loss. New Brunswick cedar shingles still range from $3.30 to $3.40 for extras on Boston freight rates.

MANITOBA AND BRITISH COLUMBIA.

The lumber trade is more quiet than usual at this season of the year. Dealers are not carrying large stocks, but are disposed to delay placing orders until later in the season. Indications point to another very active building season in Winnipeg, as already plans are under way for a number of important structures. At provincial points also there is likely to be considerable activity and a large consumption of lumber. Some apprehension has been created by the breaking up of the Pacific Coast Lumber Exporters' Association by which the cargo trade of the Pacific coast was controlled. It is said that already one of the British Columbia companies engaged in that trade has reduced the wages of its employees on account of a decline in lumber prices. Many of the logging camps are closed down as a result of deep snow.

UNITED STATES.

At this time there is very little lumber moving in the United States. Any disposition to buy has been thwarted by the severe weather, and until there is a decided change little activity is looked for. In the face of these conditions, prices rule very firm. The middle grades of pine are less firm than the rest of the list, but there is no marked weakness in anything. It is said that in the Lake Superior district the lower grades are bought up so closely that the market is almost bare of stock. Recent quotations on No. 5 boards from manufacturers are $7.50 and $8. There continues to be a steady demand for box lumber, and some concerns who have been short and have been unable to obtain stock owing to the heavy snow storms are in an awkward position. Some contracting for the new cut has been done and there seems to be a disposition on the part of consumers to place orders whenever they are offeredthe sl ightest inducement, as they recognize the probability of a lumber shortage on account of unfavorable logging weather. Hardwoods are not moving very actively, but the position is strong. At many points the supply of dry stock is practically exhausted and sales that are now made are of lumber yet to be cut or that is being manufactured. There is some demand from dealers for maple, soft elm, birch and basswood. The Hardwood Manufacturers' Association last week adopted a new list which makes an advance in the prices of cherry, walnut, hickory, thick ash, and one or two other kinds of lumber. The hardwood lumber business of the United States is now thoroughly organized and this should do much towards maintaining prices.

GREAT BRITAIN.

Lumber buyers in Great Britain are pursuing a waiting attitude. The question of war or peace between two powerful nations is still in the balance, and if the negotitiations now pending should be followed by hostilities, the effect upon the timber trade would not be beneficial. There is also the uncertainty regarding the fiscal policy. The most that can be expected under these conditions is that lumber prices will remain steady. The most important development during the past fortnight is a decline of ten shillings a standard in the price of Swedish redwood. This has caused buyers to be still more cautious and it is difficult to close contracts. Pine deals have been received at Liverpool and London in considerable quantities from Portland and Boston, evidently the low rate of ocean freight being an inducement to ship by rail to these points. As a rule the shipments have been upon arrival and consequently values remain firm, with perhaps a slight upward tendency. Spruce deals are going into consumption at a moderate rate, and notwithstanding the low prices realized at late auction sales values generally are firm.

STOCKS AND PRICES.

O. J. O'Brien, who is lumbering at Noel, N. S., expects to cut 500,000 feet of deals during the coming season.

The trans-Atlantic shipments from the port of Tusket, N. S., in 1903 were 4,000,000 feet, the shippers being Dickie & McGrath.

S. O. Church & Bro., of Sand Point, Ont., have seven camps in operation taking out cooperage stock timber, six in Ontario and one in Quebec.

Hugh Rutherford, of St. Helens, Ont., recently sold to Mr. Mitchell, of Lucknow, 180 trees for $1,800—another evidence of the value of standing timber.

J. McTeigue, of Port Arthur, Ont., is asking for tenders for the supply of 1,500 standard railway ties, including green cedar, tamarac and jack pine.

Fifteen million feet of lumber owned by White, Ryder & Frost were destroyed by fire at Tonawanda, N. Y., last week. It is said that the loss is upwards of $300,000, but that the lumber was fully insured.

A Toronto firm is reported to have purchased 15,000,000 feet of lumber from the Edward Hines Lumber Company to be cut this season by the Hayward mill at Duluth, Minn. The stock is intended for export.

About 8,000,000 feet of No. 3 and No. 4 boards was last week sold to Buffalo parties, partly at Duluth and partly at Cloquet, Minn. It is said that $12 was paid for No. 3 and $6.50 for the No. 4.

Lumbering operations are being carried on quite extensively in the vicinity of Midgic, N. B., this winter. The operators are Arthur George, of Upper Sackville, Isaac Kay, of Centre Village, and Charles Hicks and J. & C. Hickman, of Midgic.

It is estimated that the log cut on the Penobscot waters this winter will exceed that of last season, amounting probably to 225,000,000 feet. On the St. John river waters in Maine, which include the Aroostook river, the aggregate cut will be 64,000,000 feet.

Lumbering operations around New Liskeard, in the Temiskaming district, were very active this winter. The Rideau Lumber Company, J. R. Booth and E. B. Eddy, of Ottawa, are all operating there, while J. B. Klock, of Klock's Mills, and Gillies Bros., of Braeside, are taking out square timber. It is estimated that these lumbermen will purchase from the settlers fully $200,000 worth of saw logs and pulp wood this winter.

The Department of Interior, Ottawa, is asking for tenders up to February 24th for a license to cut timber on Berth No. 1133, township 7, and on Berth No. 1134 situate on Bloodvein river, both in the Province of Manitoba. The former contains 24 square miles and the latter two square miles. The Department will also receive tenders up to March 22nd for a license to cut timber on Berth No. 1138 in the vicinity of Fox Plain, District of Sasketchewan, containing thirty square miles to be selected in not more than six blocks within a prescribed area.

Newman Silverthorne, Somerville, Ont., last week sold to A. S. Lamb and William Harris, of Meadowvale, the standing timber on about 150 acres of land situated at Somerville, in the township of Etobicoke, ten miles west of Toronto. It is probably the largest body of standing timber near Toronto and consists of maple, basswood, beech, elm, hickory, oak, birch, ash and a small quantity of hemlock. The purchasers are to remove the timber within a period of four years and are to be allowed to cut all trees over 15 inches in diameter 3 feet from the ground. It is stipulated that the timber must be manufactured on the ground While the details of the transaction are not announced, it is understood that the purchasers agreed to pay about $8 per thousand feet for the timber as it stands. If this price is correct it indicates the enhanced value of a hardwood forest.

Under date of January 16th, Messrs. S. P. Musson, Son & Company comment on the Bardados lumber market as follows: "There have been no arrivals of either white pine or spruce since our last report, but dealers' yards are fully stocked, and if further receipts take place in the immediate future we anticipate lower prices. Of the lots mentioned in our last the spruce by the "Lolita A" was rejected and resold at $18.05 round. The white pine by The "H. Shafner" was also rejected and sold at $17 round. The only arrival of shingles is a small lot of 54,000 Long Gaspe by the "Dahome," which were sold at $6.01. This description and Dimension Cedar are both wanted, but Laying Cedar are in fair supply.

ST. JOHN AND AROOSTOOK LOG PRODUCTION.

Following is the estimate of the log cut on the St. John and Aroostook river waters for the present season:

THE ST. JOHN WATERS.

	Feet.
W. H. Cunliffe's Son, Allagash waters	12,000,000
St. John Lumber Co., St. Francis waters	6,000,000
St. John Lumber Co., Allagash waters	5,000,000
Stadig & Quincy Lumber Co., St. Francis waters	5,000,000
Neil McLean, Little Black waters	1,000,000
Chas. E. Jones, Little Black waters	2,000,000
John Sweeney, St. John main river	2,000,000
John A. Morrison, St. John main river	3,000,000
Andre Cushing & Co., St. John main river	7,000,000
	43,000,000

THE AROOSTOOK WATERS.

Stetson, Cutler & Co.	7,000,000
C. A. Trafton	5,000,000
Portage Lake Mill Co., Fish river	3,000,000
Weeks Bros.	3,000,000
Fort Kent Mill Co., Fish river	3,000,000
	43,000,000
	21,500,000
Total	64,500,000

TO HOLDERS OF BIRCH LIMITS.

THE OTTAWA VALLEY.

[Correspondence of the CANADA LUMBERMAN]

It is now an assured fact that the log cut in the Ottawa district will show a marked reduction on that of the season of 1902-1903. On account of the deep snow, log cutting has had to be suspended from three weeks to a month earlier than was expected at the beginning of the season as judged by the records of previous years. Even the work of log hauling has been attended with great difficulty and hundreds of extra horses have had to be engaged. On most of the limits the snow lies from four to five feet in depth.

Business continues slack in and about the lumber yards. As a consequence prices show few changes and hold to the figures that ruled for several months past. Pine shorts have declined a dollar a thousand. Lath is also easier by twenty-five cents, but shingles are firmer, showing a corresponding advance. In hardwoods there is considerable uncertainty and it is difficult to catch a figure. A larger output in the Ottawa district is looked for, but as the demand is constantly increasing, this will make little or no difference on prices.

The latest deal in square timber secured for the McArthur Export Company the cut of the Mason & Gordon Company, of North Bay. The prices mentioned on the street is 58 cents.

Government returns show that the square and waney timber output will be slightly greater this season than last. While there is a marked falling off in the Kippewa district there is an increase in the Georgian Bay and Thunder Bay districts.

Hurdman & Elmitt, of Ottawa, have contracted for the entire cut of 1904 shingles at the mill of the James Maclaren Estate at Buckingham. The same enterprising firm handled this shingle cut last season.

On account of low water caused by the accumulation of anchor ice and snow, it has been found necessary to shut down the big Booth mill. Dynamite is being used to blast out the ice.

The Booth mill is receiving daily large shipments of logs by rail from the Madawaska limits.

OTTAWA, February 1, 1904.

C.P.R. SHIPMENTS.

The shipments via the Canadian Pacific Railway from the state of Washington for the years 1903 and 1902 were as follows:

	Lumber, Cars.		Shingle, Cars	
	1903	1902	1903	1902.
January	41	60	143	41
February	25	63	63	31
March	57	77	54	56
April	63	72	55	19
May	67	105	102	71
June	93	106	145	90
July	47	142	41	93
August	49	7	53	99
September	57	4	20	79
October	65	74	57	43
November	39	57	63	23
December	29	56	38	51
Total	632	823	834	696

J. A. Lamarche, planing mill, etc., Montreal, has assigned and a meeting of creditors is being held to-day.

John E. Hoffman, planing mill and wagon maker, Dashwood, Ont., is reported to have assigned to Joseph Snell.

REORGANIZATION OF A LUMBER BUSINESS.

The business of Robert Stewart, Guelph, Ont., has grown so rapidly that it has been found necessary to re-organize, and a limited liability company has been formed to continue the business. Mr. Singer, who has represented the Waldstein Lumber Company, of St. Louis, Mo., has resigned that position and is taking an active interest in the management of the new company, which is known as the Robert Stewart Company, Limited. Mr. Robert Stewart is president, Mr. R. D. Stewart vice-president, and Mr. Singer secretary and treasurer. The capitalization is $100,000. They have already greatly increased their stocks of pine and hardwood lumber, for which they report an active demand at good prices. Mr. Robert Stewart is one of the oldest lumbermen actively engaged in the trade, his business having been established in 1856.

CANADIAN LUMBER SHIPMENTS.

From St. John, N.B.: Str. Lake Erie, for Liverpool, 2,096 bundles flooring, 1,607 pcs. hardwood lumber, 163 elm and hickory logs, 87,120 ft. pine deals, 679,616 ft. spruce deals, 297 tons birch timber. Str. Montcalm, for London, 2,029 bundles flooring, 24,550 ft. pine boards. Str. Alcides, for Glasgow, 1,175 pcs. oak, 189,358 ft. deals. Str. Loyalist, for London, 118,400 ft. spruce deals, 52,822 ft. birch deals.

THE BOSTON MARKET.

Millions of feet of spruce logs were left in the Maine rivers last year, which will come down early this spring. The high prices of lumber have stimulated logging, so if the weather is favorable a large amount of logs will be put into the rivers this winter. The large supply of this year added to the surplus of last year may depress the price of spruce lumber. Reports from most of the large lumber yards of New England say they have on hand only from one-half to two-thirds the amount carried in previous seasons.

The lumber business in New England is improving slowly and will in all probability continue to do so from now on. Prices are unchanged and wholesalers look for a drop in prices in the spring. Boston prices are as follows : Rail shipments : Spruce—10 and 12 in. dimensions, $21; 9 in. and under,$19; 10 and 12 in. random lengths,10 ft. and up,$20.50; 2x3,2x4, 2x5, 2x6, 2x7 and 3x4, 10 ft. and up, $17 ; all other random, 9 in. and under, 10 ft. and up,$18 to $18.50; merchantable boards, 5 in. and up,$17; matched boards, $18.50 to $19 ; bundle furring, random lengths,p. 1 s., $17.

Shingles—Cedar extras, $3.35 to $3.40; do., clear, $2.85; do., 2nds, $2.25 ; do., clear white,$2.10; do., No. 1,$1.55. Laths, spruce, 1½ in., $3.20 to $3.25 ; 1 5-8 in., $3.40.

Clapboards, spruce, 4 ft. ex., $44 to $45 ; do., clears, $42 to $43 ; do. 2nd clears, $40 to $41 ; pine, extras, $59 to $60; clears, $54 to $55; 2nd clears, $49 to $50.

NEW CROWN TIMBER AGENTS.

Mr. Thomas George Wigg, who was recently appointed Crown Timber Agent for the new district of Thessalon, Ontario, was born in Norfolk County, near Norwich, England, on the eighteenth of October, 1863, and came to Canada with his parents when he was three years old, they taking up their residence at Lakefield, near Peterborough. He acquired his education at the public schools of his

MR. T. G. WIGG,
Crown Timber Agent for Thessalon District.

neighborhood and in Peterborough, and at the age of about fourteen years, spent a term in celebrated Collegiate of Dr. Tassie in Galt.

After Mr. Wigg's school days, he entered the employ of James G. Ross & Company, the once well known Quebec shippers of timber, clerking and culling for them in the Township of Harvey, County of Peterborough, and elsewhere. He remained in their employ for over five years, from 1879 to 1884, having spent one of these years in their Oswego lumber yard and "on the road" selling lumber and timber for that firm.

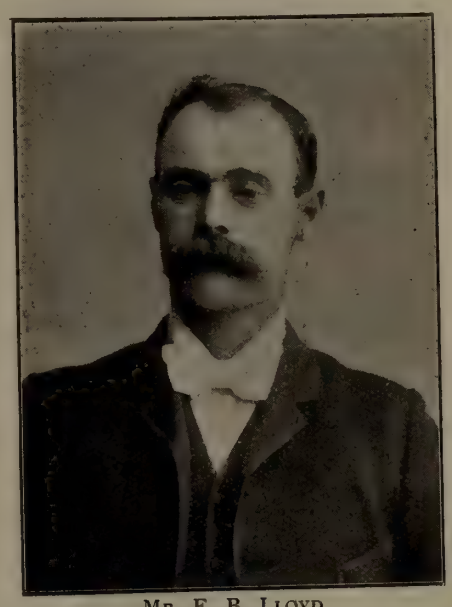
In the year 1885 Mr. Wigg entered the employ of R.A. Strickland & Company, operating in timber on the waters of the Mississago, in the Townships of Gladstone and Montgomery, in the district of Algoma, overseeing the making and scaling of their timber for export, and continued in their employ about three years. After they ceased operations the Department of Crown Lands for Ontario offered him the position of wood ranger for the Government along the north shore of the north channel of Lake Huron from Sault Ste Marie to the French river, which he accepted. He remained in the service of the Ontario Government until after the death of P. C. Campbell, crown timber agent for the district, when the Government divided the territory and were pleased to offer Mr. Wigg the appointment, which he accepted, of crown timber agent for the sub-division extending from the neighborhood of Bruce Mines on the west to Massey on the east. His headquarters are at the town of Thessalon.

Mr. Wigg is well connected, being related to Mrs. Moodie, Miss Strickland, Mrs. Catharine Parr Traill and others whose names are household words in forestry, wild flowers, literature, and pioneer life in Canada.

Mr. E. B. Lloyd, the new appointee for the Temiskaming district, was born in the Township of King, York County, and was appointed under the Hardy administration by Hon. J. M. Gibson, then Commissioner of Crown Lands, as a forest ranger. In that capacity he traversed the Muskoka, Parry Sound, Nipissing, aud East Algoma districts, as well as a portion of the Temiskaming region, and has penetrated the great north as far as the Abbittibi waters, having thus obtained a wide knowledge of the resources of the chief lumbering districts of the province. He also spent seven years in the spruce forests on Lake Winnipeg. Mr. Lloyd states that he has found an abundance of young pine growing, which shows the benefit of protecting the forests and of inaugurating practical methods of reforestation. He admires the foresight of the Ontario Government in setting apart forest reserves, which he regards as a national asset of great value. Mr. Lloyd's headquarters are at New Liskeard.

DESTRUCTION OF TIMBER BY INSECTS.

The United States Department of Agriculture has issued an interesting bulletin on a



MR. E. B. LLOYD,
Crown Timber Agent for Temiskaming District.

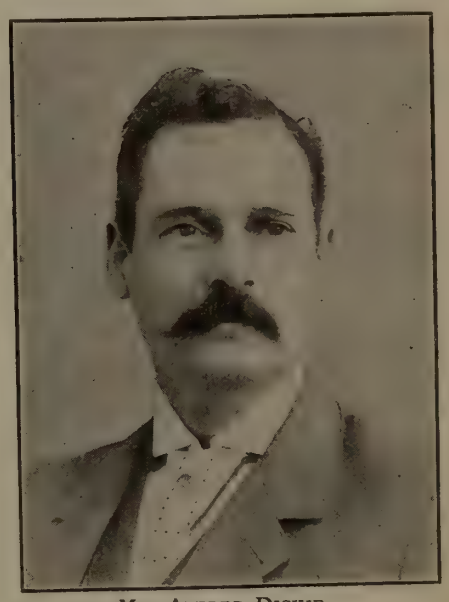
disease of the western yellow pine known locally as the "bull pine." This timber constitutes the principal growth of the Black Hills Forest Reserve in South Dakota, and it is rather startling to learn that about half the trees in the reservation, containing some six hundred million feet of valuable lumber, are either dead or dying. The disease, known to lumbermen as "bluing," is caused by a beetle, which burrows under the bark of the bull pine, and gnaws longitudinal channels, and soon completely girdles the tree. Everyone knows that the upward flow of sap in trees in the spring takes place in the soft layer just under the bark; and, when the flow is interrupted by the cutting of the layer, the tree dies. This is the result of the channeling of the bull pine by grubs, the leaves turning yellow and then dropping off, while the wood exposed to infection from the scores of fungi soon assumes a blue color, from the development in it of a blue parasite. The blue color affects only the sapwood and it is found that the strength of the timber is not injured by it; but the way is prepared for other fungous growths, and, in a year or two, a red parisite, something like the familiar dry rot fungus, attacks the wood, feeding upon the cellulose, and completely destroying it. The author of the bulletin, Dr. Hermann von Schenk, advises that all trees of which the wood is blued, but not yet decayed, should be cut down at once, and the timber utilized before the "red rot" renders it unserviceable; and that the rotten and useless trunks, which menace the entire forest with destruction by fire, should be removed.

FORESTRY CONVENTION.

A the annual meeting of the American Forestry Association, held in Washington recently, Mr. Gifford Pinchot, chief forester for the United States, Mr. E. Stewart, Dominion superintendent of forestry, and Dr. T. H. Beam, director of the forestry exhibit at the World's Fair, St. Louis, were appointed a committee to make arrangements for an international forestry convention to be held at St. Louis during the Fair. No date was set for the convention, but it will probably be held early in the fall of 1904.

THE NOVA SCOTIA LUMBERMEN'S ASSOCIATION.

An adjourned meeting of the Nova Scotia Lumbermen's Association convened at Truro, N.S., on December 29th, 1903, for the transaction of general routine business and the election of officers for 1904. In addition to adopting by-laws, Mr. J. H. Livingstone's resolution in respect to better fire protection for timber lands was considered. Mr. T. G. McGrath, of the Western Nova Scotia Association, was present, and stated that that body



MR. ALFRED DICKIE,
President Nova Scotia Lumbermen's Association.

were drafting a bill in connection with the same matter, which would be presented at the next session of the Provincial Legislature. It was, therefore, decided to co-operate with the Western Association and present a joint memorial.

The following officers were elected: President, Alfred Dickie, Stewiacke; vice-president, J. H. Levingstone; treasurer, W. H. Kent; secretary, D. G. McDonald.

People are convinced by reason. To make your ads convincing, you ought to have a reason for every claim.—Printers' Ink.

THE Wood-Worker and Retailer

ANNUAL MEETING OF LUMBERMEN.

The next annual meeting of the Western Retail Lumbermen's Association will be held in Winnipeg on Wednesday, March 2, 1904.

DEVICE FOR CUTTING SPIRAL MOULDINGS.

A subscriber writes that there is a device that can be attached to a "sticker" or "shaper" that will cut out rope or spiral mouldings, and asks that the device be described in these columns.

There was a device invented a number of years ago by a Mr. Pendell, but which has been very much improved by a Mr. James Long. It is made as follows :

The stock should be sawed out and struck round a sticker, or run through a hollow rounding chuck. Over the cutter-head of any machine you wish to use, fix a movable table with a opening in the bottom, through which the knives can come up. Then take a block of wood 1½ inches thick by 6 inches wide, 16 inches or 18 inches long, and bore, say, a seven-eighth inch hole to one side and through the block, letting the bit cut out be about one-eighth inch (as in Fig. 1.) Fasten this block on the table over the knives, so that a rod in the block will lie at an angle of about 45 to the cutter-head. Then run bed of machine up until knife will cut a full bead or beads. The best to experiment on will be the three-strand when cut with a common stocker knife, with three beads one-half inch or thereabout, with the centre head dropped back a little. The next thing to be considered is the arrangement for twisting the stock through the block. Take a block of hard wood 4 inches wide, seven-eighth inch thick, and 8 inches long; slot each end about 2 inches. Take two thin pieces of steel (old band saw blades will do), make them sharp on the back, and drive them into the block lengthwise in saw kerfs about one-fourth inch apart (see Eig. 2) ; the object of the slot is to make the beads intersect. Fig. 3 shows the twister in position. The stock is twisted through by hand. In case the knives do not cut out the feed marks, move the twister until they do. The tighter you have the twister the more positive the feed.

Fig. 4 and 5 show improvements originated By Mr. James Long. Fig. 5 is an end view of the form, which is V-shaped in order to lessen the friction and cause the work to feed easier ; at the same time it keeps the piece tight in the form. The diagram also shows a three-eighth inch piece, which is fastened to the form by screws. This three-eighth inch is cut out just enough to let the bead cutters come through in the center, and it is secured to the table of machine by iron hand screws. Fig. 4 shows a plan or top view of the wooden form. It will be seen that one of the V-shaped pieces is secured to the three-eighth inch piece by wood screws, and is stationary, while the other V-shaped piece is adjustable and is held in place by a spring, which is secured to the outside square piece and also to the V-shaped piece. The arrangement for twisting the stock through

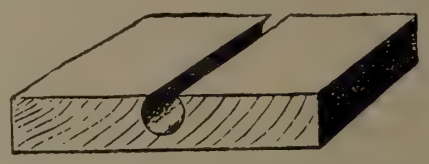


Fig 1

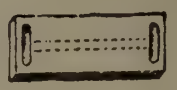

Fig 2

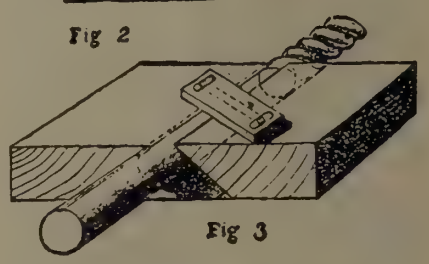

Fig 3

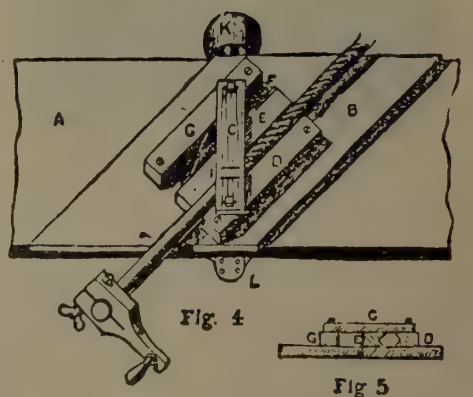

Fig. 4

Fig 5

FOR MAKING SPECIAL MOULDINGS.

the form is the same as Mr. Pendell's. The whole arrangement is very perfect, producing first class work, and even cypress can be turned out finished without sandpapering. The arrangement of this form is such that it can be easily adjusted it the idea is understood and a little patience exhibited until satisfactory results are obtained. A crank handle about 8 inches long, with a thumb-screw to tighten the crank on the stock, is shown in Fig. 3, and is a great help in twisting. There is nothing neater or prettier in appearance than a small rope moulding placed in the corners of panels and other ornamental cabinet work and the general run of joiner's work, and the cheap and simple manner in which these mouldings can be made, after the plan here described, commends them for a great many purposes. Fig. 1.—Block bored out right size to receive stock. Fig. 2.—Piece of wood showing slotted ends for adjusting screws ; Dotted lines are saw kerfs to receive pieces of steel for feeding stock. Fig. 3.—Fixture complete, with work in place. Figs. 4 and 5.—A table of machine ; B, base piece, three eighth inch thick ; C, the holding down piece, in which are inserted the two pieces of steel on the under side, for feeding the stock along ; D, stationary V-piece ; E, movable V-piece ; F, spring ; G, spring support piece ; K, driving pulley on spindle ; L, spindle-box.

WASTE IN HANDLING LUMBER.

I wish to call the reader's attention to the wasteful manner of caring for seasoned lumber, particularly hardwood. When it is received from the mills or yards it is in good condition, but of mixed lengths of from 12 to 16 feet. Often, after being delivered, says a writer in the Wood-Worker, it is allowed to lie exposed to the weather, sometimes for days, finally being piled by men whose height of ambition is measured by the height of the pile; for men of ambition and energy soon graduate from the roustabout list. The pile is generally started in the most convenient place, without any reference to its future use, with any kind of foundation nearly level. Let me repeat it, nearly level. This is one of the marked peculiarities of a poor pile. This lumber is generally piled as it is picked up, with most of the long boards near the bottom. As the pile goes upwards numerous ends are seen projecting 2 to 4 feet. The top is covered with knotty, shaky scrap, picked up from anywhere and fastened down with a couple of cross pieces and stones.

Let us note the result with such a constructed pile. A good share of the long boards, after six months' exposure to the sun and rain, have from 2 to 4 feet of firewood attached. It it profitable for the laboring man to cut up such piles at any time ; in the winter they can use part of it for fuel to warm the shop ; in the summer, where wood is sold to the men, their wives can use it to cook their dinners. If any one is skeptical as to these statements, let him take a piece of hardwood and expose it to the weather for a short time. The results will prove the statements.

Now let us look to the cover and see its results. Being of almost anything that but a short time ago were good boards, this cover has been shifted by the wind, leaving the lumber exposed to the rain, sun and snow. Where

the piles are nearly level this is a serious matter, as the top lumber will become very wet in winter. I have seen four or five layers of unstripped lumber frozen together. This was taken into the shop and worked up; the pieces with the most ice on were thawed out around the stove, and all completed together. After two weeks' time the finished articles were found to have shrunk more than ⅛-inch. Rivets had to be reriveted, and the whole was unsatisfactory. It does seem incredible that such conditions exist as were found by "A Wandering Mechanic," in the December number—that of the bottom boards in a pile projecting 18 inches farther than the top on the front end of the pile. I am sorry to say I have witnessed the same.

Since outlining the above it occurred to me to look at some piles convenient to where I work. I counted forty piles, all hardwood, from 1 to 6 inches thick, belonging to three different companies. All three firms had the same defects. Ten piles were in good condition as to cover, length of lumber and slant of piles. The remaining thirty were as bad as stated in the first part of this article. In one pile the bottom part was 2-inch ash, 10 feet long, the top half 1½-inch maple, 14 feet long. This pile had 2-inch drop in 14 feet. About next spring a good share of the maple will be in very poor condition.

I dare not stop here, or I will be in the position of the minister who preached a powerful sermon on heaven and neglected to tell how to get there. As I have used so much space in illustrating the defects in much lumber piling, I will try in a brief way to state what I believe to be a good practice. Select a convenient place for the pile, where it can be reached easily, especially when heavy stock is wanted. Build a good foundation, something that will not shift and settle much as the pile increases. Give the foundation at least one inch slant in 12 feet. I do not like to pile nearly level and slant the cover, as that leaves space for snow and rain to blow in. If possible, sort your lumber and place the different lengths in piles by themselves, so it can be cared for and cut to better advantage.

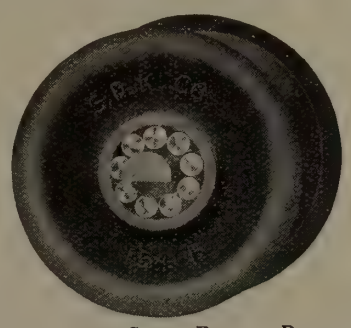
If the pile is stripped, use enough strips to keep the boards straight, and place one above the other; place the end strips even with the ends of the boards. Let each succeeding layer of boards project a little over the one below (on the high end, of course). This will provide a drip for the moisture and prevent the pile from becoming wet. Cover the pile with boards of good width, at least equal the length of the stock, and tie the same down, and you have a pile of lumber that you will be proud of. It looks well, and you can rest assured that when you wish to use some of it, it will be found in good condition, even it a foot of snow has to be removed before you can get at it.

Before closing I would like to say a few words about the material for the cover. I have found that pine lumber of the class used for cover is of very short life; the knots fall out, the boards split and are very unsatisfactory. I have been experimenting with basswood for this purpose, and up to the present time find it superior to pine. I have two boards, a pine and basswood, each with a section oiled with common dipping oil, exposed under the same conditions. I feel confident the oiled basswood will prove the best for lumber cover.

Under no conditions pile kiln-dried lumber out of doors with only a cover to protect it, as it will absorb moisture and need drying again. Never pile different kinds of lumber on top of each other, as you will probably want the covered lumber first.

THE "STANDARD" DRY KILN.

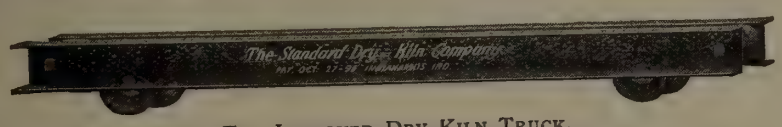
More durable and easier-running than any other truck on the market is the claim made by the Standard Dry Kiln Company, of Indianapolis, for their new dry kiln truck. This is why:



SHOWING THE STEEL ROLLER BEARINGS.

Instead of the usual cast iron wheels as formerly used, "The Standard" truck is now supplied with wheels of malleable iron. Of course, these malleable iron wheels are a great deal more durable than the ordinary cast iron article. They will wear almost like steel, and the flanges will not break off, as the flanges of a cast iron wheel are very likely to do.

Another important innovation in the new truck made by this company is the manner in which they make their steel roller bearings. They are gotten out by a special machine that points the ends. A certain amount of friction is necessarily caused by the flat ends of the axle coming into contact with the sides of the truck—which is the case in other trucks. In "The Standard" only the points come into contact, and they are almost as sharp as pins. This reduces the friction to a minimum, and makes, in the opinion of the manufacturers, this truck by far the easiest running truck on the market.



THE IMPROVED DRY KILN TRUCK.

The cuts here shown give an excellent idea of the new improved dry kiln truck made by the Standard Dry Kiln Company. The company has recently gotten out a number of new patterns, and will be pleased to send a copy of their catalogue on request. The catalogue gives a detailed description of their various styles of trucks, the prices of which are as moderate as is consistent with their extremely high quality.

HOO-HOO CONCATENATION AT LONDON.

Duffield Block, London, Ont., was the scene of a Hoo-Hoo Concatenation on Friday, January 29th, at which a number of candidates were initiated. The offiers were:

Snark of the Universe—W. C. Laidlaw, Toronto.

Senior Hoo-Hoo—Charles Hadley, Chatham.

Junior Hoo-Hoo—Donald Ferguson, London.

Bojun—J. M. Diver, Sarnia.

Scrivenoter—A Dinnis, Toronto.

Jabberwark—George H. Belton, London.

Custocation—W. J. MacBeth, Toronto.

Arcanoper—A. Leishman, Orillia.

Gurdon—Fred C. Boake, Toronto.

Assistant Junior Hoo-Hoo — William Hadley, Chatham.

Grand Medical Examiner — Hugh Munro, Toronto.

The candidates who were initiated were: John T. Laking, Hamilton; Norman S. Fieischer, Stratford; Ross Rastall, Brantford; Wm. J. Lovering, Coldwater; H. C. Sletman, John McGibbon, E. C. Barre and E. A. Labelle, Sarnia; Benj. Blonde, N. H. Stevens, and Walter Scane, Chatham; J. C. Dietrich, T. F. Shurly and O. H. Vogt, Galt; E. D. Croden, London; C. D. Ten Eyck, Toronto; George N. Kernahan, London; A. D. McLean, G. H. Belton and H. A. Sourwine, Sarnia.

Others present were: A. E. Paget, Huntsville; J. G. Cane, S. P. Higgins, and John Barry, Toronto; F. Maundrell, Woodstock; J. H. Whitham, Brantford, and E. Singer, Guelph.

Shortly after 12 o'clock an excellent banquet supper was served, after which speeches were given by different members.

AMERICAN SHOOKS IN ENGLAND.

United States Counsul Day at Bradford, England, in a report says:

"The importation of American shooks into this district is assuming considerable proportions. Nearly all shipers of textile merchandise have resorted to the use of these cases for forwarding their goods to the United States. The first attempts to introduce them were made in 1892, but it was some years before the full advantage of their use was realized. In 1902 there were 6,918 cases imported, while during the first nine months of the present year there have been 18,893.

CONVENTION OF WHOLESALE DEALERS.

The annual meeting of the National Wholesale Lumber Dealers' Association will be held at Washington, D.C., on March 2nd and 3rd next. The proceedings will include the usual banquet. Mr. E. F. Perry, 66 Broadway, New York, is president of the association.

Canada's pavilion at the World's Fair is finished. The structure is one of the most ornate among the many attractive foreign buildings and occupies an advantageous site north of the Palace of Agriculture. The intra-mural railway passes the main entrance.

THE NEWS

—Walsh Bros. are preparing to build a wood-working factory at Chatham, N.B.

—W. H. Atkinson, lumber dealer, Deloraine, Man., has sold out to John Lochead.

—A charter has been granted to the Three River Planing Mills, Three Rivers, Que.

—The planing mill of Davis & Eizerman at Mitchell, Ont., has been sold to W. Eizerman.

—The Carney Lumber Company, Limited, of Massey, Ont., has been granted incorporation.

—It is reported that Tremblings & Traub intend establishing a sash and door factory at Didsbury, N.W.T.

—The lumber business of James Armstrong at Parkhill, Ont., has been purchased by W. H. Mark & Company.

—G. Stevens and A. F. Robinson have registered as proprietors of the Eastman Lumber Company, Eastman, Que.

—The lumber firm of Anderson & Greenwood, Fleming, N.W.T., was dissolved by mutual consent on January 1st last.

—J. A. Thompson, Arcola, N.W.T., has been succeeded by the Moose Mountain Lumber and Hardware Company, Limited.

—McBean & Verrall, hardwood lumber dealers, Toronto, are building a new office on Bathurst street, south of the Grand Trunk tracks.

—Shaw Bros. have sold their timber limit at Crooked River, N.W.T., to William Armstrong, of Fort River, who is building a modern saw mill.

—The Leishman-Maundrell Company, of Woodstock, Ont., has changed its corporate name to the Woodstock Lumber & Manufacturing Company, Limited.

—The Tait, Carss Lumber Company was recently organized at Orillia, Ont., by A. Tait, S. E. Carss and C. C. Carss. The capitalization is placed at $40,000.

—It is reported that the M. Brennans & Sons Manufacturing Company, of Hamilton, Ont., will build a large saw mill on their new limits in Osborne county this spring.

—It is reported that H. G. Buck and D. J. McLean purpose building a mill at Norwood, Ont., for the manufacture of cheese boxes, heading, and all kinds of veneering material.

—The McLean Lumber Company has been organized at Windsor, Ont., with a capital of $40,000, the provisional directors being A. N. McLean, W. J. Pulling and W. T. Carter.

—The A. R. Williams Machinery Company, of Winnipeg, Limited, is being incorporated. The applicants are A. R. Williams, T. A. Hollinrake, F. W. Kischel and W. H. Young.

—The Goderich Planing Mills, Goderich, Ont., has been incorporated, with a capital stock of $40,000. The provisional directors are J. T. Goldthorpe, John Lawson, and James Buchanan, jr.

—It is the attention of Thompson, Avery & Gray, whose saw mill at Clyde Forks, Ont., was destroyed by fire last month, to rebuild immediately, as they have 2,000 logs at the mill to be sawn.

—Two old Ontario boys, Robert E. Skeith and Thomas E. Skeith, formerly of Cornwall but now of Stillwater, Minn., have purchased the lumber business of Small & Fisher at West Branch, Iowa.

—The Oriental Power & Pulp Company have just taken tenders on the erection of a saw mill at Swanson Bay, Graham Reach, B.C. J. A. McKinnon, of Vancouver, B.C., is manager of the company.

—W. F. Brooks, of Minneapolis, states that the new saw mill of the Backus-Brooks syndicate at Rainy River, Ont., will have an annual capacity of 70,000,000 feet and will be in operation about May 1st.

—The British Columbia Government has granted incorporation to the Great Northern Lumber Company, Limited, capital $25,000, and the Great West Lumber Company, Limited, capital $100,000.

—John Thede, of Port Elgin, Ont., has purchased from Niebergall & Cameron, of Wiarton, a saw mill and 120 acres of land at Sauble Falls, Ont. Mr. Thede is considering the question of developing the water power.

—The Smeeth planing mill at Goderich, Ont., has been purchased by J. T. Goldthorpe, who is forming a joint stock company to operate it. It is rumored that the firm of Buchanans & Lawson will amalgamate with the new company.

—The Montreal Lumber Company Limited, at their annual meeting recently, elected the following officers: President, John McKergow; first vice-president, George J. Dewar; secretary-treasurer, Harry Brown; managing director, W. K. Grafftey.

—Louis Labonte met his death in the mill of L. Frenchette at St. Ferdiand de Halifax, Que. He was putting a circular saw in motion when his arm caught in the belting and he was drawn between the saw and the wheel, causing almost instant death.

—The annual meeting of the directors of the Fredericton Boom Company was held in St. John, N.B., last month, when W. H. Murray, A. H. F. Randolph, Robert Randolph, G. B. Dunn, Parker Glasier, E. L. Jewett, and L. L. Jewett were re-elected as directors.

—It is reported that the saw mill of the Saginaw Lumber & Salt Company at Sandwich, Ont., is gradually sinking into the marsh ground upon which it stands, and that the company have under consideration the rebuilding of the mill on another site in Sandwich Bay further down the river.

—The Dominion Government has given a charter of incorporation to the La Ferriere Lumber Company, Limited, of Montreal. The capital is $125,000 and the purpose is to manufacture lumber, pulp wood, etc. Rodolphe Forget, Dixon Coyle and Richard Fielder, of Montreal, are interested.

—L. M. Baum, of the Pacific Coast Wooden Pipe Company, Seattle, Wash., is considering the establishment of a branch manufactory in Vancouver, B.C. It is said that the timber of British Columbia is admirably adapted to the manufacture of wooden pipes for waterworks and other purposes.

—The two-band saw mill of the Charlton Saw Mill Company, Collingwood, Ont., ran 156 days during the season of 1903, cutting 149,525 white and red pine logs, making a total of 15,633,143 feet of lumber, 6,113,000 laths, 529,220 tub and pail bottoms, 170,275 pieces of curtain poles, 4,069 cords of 4-foot slabs and edgings and 1,146 cords of short wood.

—A number of Montreal gentlemen, including Lewis Skaife, G. A. Campbell, and J. W. Macdougall, have organized the Canada South Africa Lumber and Produce Company, Limited, with a capital stock of $50,000. The charter is a broad one and enables the company to operate saw mills and allied industries, to deal in timber lands, and to export merchandise of all kinds.

—A new firm, known as Shearer, Brown & Wills, Limited, has been formed to acquire the business of James Shearer & Company and the Shearer & Brown Company, Limited, Montreal, and to carry on business as general contractors and manufacturers of lumber, sash, blinds, mouldings and other wood-wood. The capitalization of the new company is $500,000.

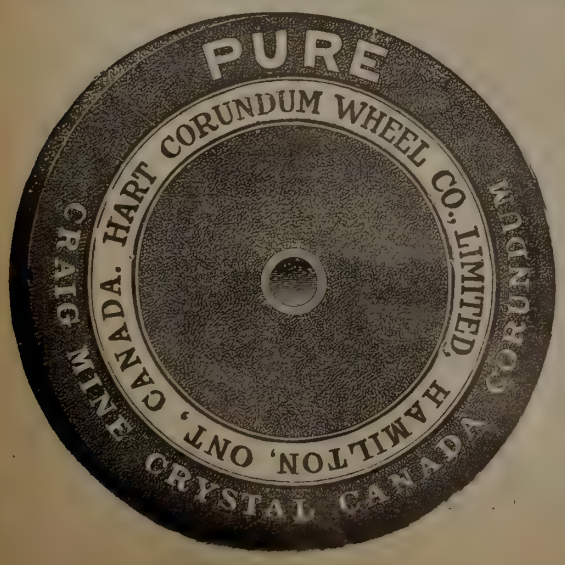
—A. J. Burton has issued the prospectus of the A.J. Burton Saw Company, Limited, of Vancouver, B. C. Mr. Burton proposes to establish in that city works for the manufacture and repair of saws, filing equipment, etc. He hopes to interest a large number of millmen of British Columbia in the project, and as he is an expert on saws himself, the venture should meet with success.

—The Telford Lumber Company, Limited, has been incorporated, the chief place of business to be Prince Albert, Saskatchewan. The capitalization is placed at $368,000, and power is given to purchase, build and operate saw mills, and to carry on a saw milling business in all its branches. The incorporators are J. M. Telford, D. H. Telford and H. A. Beard, lumbermen, J. W. Telford, mechanic, of Prince Albert; W. A. Telford, of Benson, Minn.; and M. J. Telford, of Winnipeg.

—The Ladysmith Lumber Company, of Ladysmith, B.C., one of the youngest concerns in British Columbia, have passed through a successful year. Notwithstanding a disastrous fire at the company's mill at Eiddick's Junction, and the fact that the plant was shut down for three months, the output was over 6,000,000 feet of lumber, 5,000,000 laths and 5,000,000 shingles. The capacity of the saw mill has been doubled, a new dry kiln and planing mill installed, and the shingle capacity increased to 100,000 shingles per ten hours.

—The Madawaska Improvement Company, at a meeting held in Ottawa recently, decided to suspend operations permanently owing to a gradual falling off in business. Formerly many logs were floated down the Madawaska river, but recently J. R. Booth built a railroad to his limits and connecting with the Canada Atlantic Railway. Thus the number of logs handled by water was greatly decreased and it was found that the maintenance of the improvements on the river would entail too heavy a toll on the remaining business.

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says:

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by Canadians for Canadians.

HART CORUNDUM WHEEL COMPANY, Limited, Hamilton, Ont., Can.

FOR THE CAMP

We have a very suitable lot of goods for camp supplies. We make this kind of trade a specialty. You who are not getting suited just as well as you would like, try us for your next order, and give us a chance to demonstrate our ability to give you satisfaction in this very important department of your business.

Wholesale Grocers TORONTO

CANADIAN FORESTRY CONVENTION.

The fifth annual convention of the Canadian Forestry Association will be held in Toronto on Thursday and Friday, March 10 and 11 next. This is the first meeting of the Association held in Toronto and an excellent programme is being arranged for it. Papers are already promised on the following subjects: "The Systems of Administration of Timber Lands in Canada," by Aubrey White, Assistant Commissioner of Crown Lands of Ontario; "The Laurentides National Park," by W. C. J. Hall, Department of Lands and Forests, Quebec; "Forestry in Relation to Irrigation," by J. S. Dennis, Irrigation Commissioner for the Canadian Pacific Railway Company; "Forest Reproduction in Germany," by A. Harold Unwin, of the Dominion Forestry Department. The railway companies have allowed the privilege of a single fair for those attending the meeting, without regard to the number in attendance.

THE LUMBERMEN'S ASSOCIATION OF NEW BRUNSWICK.

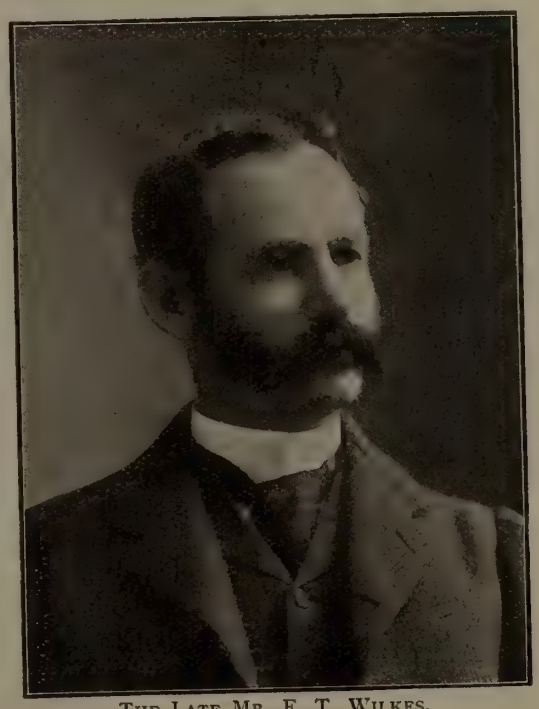
A meeting of the Lumbermen's and Limit Holders' Association of New Brunswick was held at St. John on January 12th, at which Mr. Henry Hilyard presided. The chief subject discussed was the increased charges on timber recently announced by the Government. The stampage rate, which had been one dollar on spruce and pine, fifty cents on fir and eighty cents on cedar, was increased to $1.25 in each case, while the charge for renewal of leases was increased from $4 to $8 per mile. The expression of the lumbermen was that the timber limits had not increased in value, but had rather decreased. While no objection was made to the increased dues on pine and spruce it was felt that the dues on cedar should not be higher than one dollar, as the price of cedar shingles is low. Further, in Quebec only 65 cents is charged, which places New Brunswick manufacturers at a disadvantage.

The mileage charge in Quebec is only $3, as against the new rate of $8 fixed by the New Brunswick Government. It was decided to appoint a committee to present a memorial to the Government setting forth the views of the lumbermen. This committee will be composed of Messrs. Henry Hilyard, John E. Moore and Kilgour Shives.

OBITUARY.

In the January number reference was made to the death of Mr. F. T. Wilkes, secretary-treasurer of the Waterous Engine Works Company, whose portrait is here shown. The loss to the city of Brantford and to the company with which he was associated is felt most keenly. A local writer pays him the following well-deserved tribute:

He came to Brantford when a young man to enter the office of the Waterous Company, and his many splendid qualities soon led to his rapid promotion. For many years he had been secretary of the concern, and in that capacity he rendered valuable and untiring service. With splendid loyalty and never ceasing energy he thoroughly identified himself with the



THE LATE MR. F. T. WILKES.

interests of the firm, and at all times he gave of his best. If there was one characteristic of the deceased more than another it was his sense of justice. He expected at all times promptness, efficiency and energy, and that which he looked for in others he rendered himself, full measure, pressed down and running over. Honorable in all his aspirations and dealings, he won the sincere respect and esteem of all with whom he came in contact. As a citizen and friend he was the embodiment of truth and loyalty and all the duties of life were discharged by him with a single and a sincere desire to do that which was right. In the home he was a devoted husband and affectionate father. None save those whom he held most dear can begin to compute his many acts of kindness and thoughtfulness and their sorrow can only be mitigated by the fact that such a life carries with it all the comfort of the divine assurance."

The County of Compton, Quebec, has lost one of its oldest, and for many years one of its most prominent residents, in the person of Mr. William Sawyer, who passed away at his home in Sawyerville on January 11th. Mr. Sawyer had been in failing health for some time, and of late it was apparent that his hold upon life was being slowly relinquished.

William Sawyer, ex-M.L.A., saw and grist mill owner and lumber manufacturer, was born in Sawyerville November 26th, 1815. He always resided there, with the exception of seven years from 1820 to 1827, when his parents lived in Stanstead. He was a grandson of Josiah Sawyer, after whom Sawyerville is named, and who was probably the first settler in Eaton. The latter first came in about 1792, and in 1796 brought in his family from the States. John Sawyer, then a young boy, came in with his parents and lived to a ripe old age. He died in Cookshire in 1869. William Sawyer was married at Sawyerville, September 10, 1839, to Julia, daughter of the late J. B. Smith. He represented Compton county, in the Conservative interests, in the Quebec Legislature, from 1871 to 1886, when he resigned, and was succeeded by Mr. John McIntosh. He was a generous giver to the Methodist church. Fighting opposition, adversities and discouragements, he labored to secure the building of a railway from Cookshire to the boundary line through Hereford, and this he lived to see accomplished in the present Maine Central Railway. He has carried on successfully large business interests at Sawyerville.

MARKET FOR PIT PROPS.

Mr. Peter B. Ball, Commercial Agent at Birmingham, England, writes to the Department of Trade and Commerce as follows:—

In connection with this, on going through the colleries, I find that enormous quantities of pit props are imported from Norway, France and Portugal, and see no reason why Canada cannot supply this want this district. A little over a million tons were used last year, and the colliery proprietors are only too anxious to get in touch with people in Canada.

The French people have been sending pine (which has been tapped to bring out the rosin), but this takes a great deal of life out of the stick and in case of crushes in the colleries, they are apt to break too suddenly, thus making it very dangerous. Norway supplies pine, but sappy, and Portugal supplies a harder wood which is rather more expensive. One reason why these countries are supplying so cheap to Wales is that the low freights on the return voyages make the goods cheap. I should think that from the size of the props required, Canada with its spruce and small pine should be able to supply this demand. Prices vary from 17s. to 19s. per ton. They are used in various lengths—

6½ ft.	running from	4" to 7"	diam at small end,	inside bark.
9 ft.	"	6" to 9"	"	"
13 ft.	"	8" to 11"	"	"

AUSTRALIAN HARDWOODS FOR CAR FINISH.

The Canadian Pacific Railway Company have decided to make experiments with the use of Australian hardwoods for the interior decoration of passenger coaches. Importations of various kinds of woods are now being arranged for, and it is expected that the first consignment will reach Vancouver, where the tests will be made, within the next month. The company intend building a large warehouse at Vancouver for storing the hardwood.

WOOD PULP DEPARTMENT

THE CHICOUTIMI PULP COMPANY.

The plant of the Chicoutimi Pulp Company is situated within about a mile of the pretty town of Chicoutimi, which stands on the south side of the savage River Saguenay, sixty-eight miles from its mouth. The town of Chicoutimi has a population of six thousand inhabitants, who are principally engaged in the pulp and lumber trade. The town is reached during the whole year by the Quebec and Lake St. John Railway, and in the summer by steamboats. Ocean vessels can come wi hin four miles of Chicoutimi.

The officers of the Chicoutimi Pulp Company are: President, Hon. N. Garneau; Vice-President, J. D. Guay; Board of Directors, Hon. V. W. Larue, M. P., Dr. J. A. Couture, V. S., G. Lemoine, Quebec; F. X. Gosselin and J. E. A. Dubec, managing director, Chicoutimi.

The property of the Chicoutimi Pulp Company represents a capitalization above $1,500,000, and when any man with an intelligible knowledge of machinery, and engineering constructional work, visits Chicoutimi and inspects the property and the immense work accomplished to remove the obstacles of nature by engineering skill, he cannot fail to observe the vast task completed, and admit that the amount of money was well and judiciously spent. The dam above the falls is a large contract of itself, and holds back a depth of over 20 feet of water, that runs through the immense steel flume 13 feet in diameter, made and placed in position by Ryter, Connolly & Co., Pittsburg, Pa., at a cost of $60,000. The dam cost $75,000.

The old mill (built in 1897) has proved that it is a first class wood pulp mill. It has nine grinders, twelve wet machines, and turns out 200,000 lbs. of ground wood pulp (wet) per twenty-four hours.

The new mill, recently dedicated, cost $600,000. It consumes 3,000 twelve feet logs per 24 hours. This mill has twenty grinders and eighteen wet machines, and turns out 400,000 lbs. of ground wood pulp (wet) per 24 hours. The work was carried out under contract given to Mr. Emile Cote, of Quebec. The iron structural work in connection with the building was done by the Phoenix Bridge Company, of Phoenixville, Pa., and the Dominion Bridge Company. The walls were built by Mr. C. Johnson, of Niagara Falls, and the twenty grinders were installed by the Wm. Hamilton Manufacturing Company, Peterborough, Ont., and Pusey & Jones, of Wilmington, Ohio, which firms put in 10 each, at a cost of $1,200 a piece. S. Morgan Smith Company, of York, Pa., installed the turbines at a cost of $40,000, while the rotary screens were contracted for by Baker & Shelin, of Saratoga Springs, N.Y. The shaking screens were supplied by Yansen & Dahl, Christiana, Norway, and the diaphragm screens, 40 in number, by the Waterous Engine Works Company, of Brantford, Ont.

The wood preparing plant and boilers and hydraulic presses were obtained from Bonner Bros. & Company, Syracuse, N.Y. The shafting and pulleys, which were specially made to order, and are the largest ever made in Canada, came from the well-known Levis works of Carrier, Laine & Company, while the pumps were furnished by the Dean Pump Company, of Holyoke, Mass.

The falls and rapids of the Chicoutimi river, from which the mills derive their water power, are 170 feet high and are capable of developing 15,000 horse power. The water is conducted to the water wheels by two steel penstocks, one 11½ feet in diameter, and 200 feet long; the other 13 feet in diameter and 800 feet long.

The Chicoutimi Pulp Company manufacture an excellent grade of pulp, which is marketed in foreign countries. Mr. S. Chas. Phillips, editor of The Paper-Maker, a British paper trade journal, says that the mills of the company are the best equipped in the world.

CUSHING SULPHITE FIBRE COMPANY VERSUS GEORGE S. CUSHING.

At the Equity Court Chambers, St. John, N.B., on Tuesday, January 19, Judge Barker delivered judgment in the suit brought by the Cushing Sulphite Company, Limited, against George S. Cushing. The suit was heard during August and September and the first part of October last. It arose out of the building and operation of the pulp mill of the Cushing Sulphite Company, of which the defendant was until recently manager. The judgment declares that the plaintiff company wholly failed to substantiate any of the charges of fraud or wrongdoing of any kind alleged in the bill of complaint. In regard to the cost of the mill the judgment is as follows:

"The mill and machinery seem to have cost considerably more than the estimate mentioned in the prospectus and which was prepared by experts at that time—one of them at least furnished an itemized statement of probable cost which Captain Partington had seen and examined before he consented to take stock in the company and the accuracy of which it must have been an easy matter for one of his experience to determine. This question is only indirectly involved in this suit and I should have thought it unnecessary to notice it except for the fact that it appears by the correspondence in evidence that Captain Partington was disposed to saddle the sole responsibility of this unexpected outlay upon the defendant. He should, however, not forget that during the period which elapsed from the date of the prospectus to the time when the mill was built labor and materials had advanced very considerably in price.

In the case of the machinery I think Captain Partington himself puts the advance as high as 50 per cent. Nor should it be forgotten that the skilled workmen whom Captain Partington especially selected and sent out from England to superintend the construction and placing of the machinery in some cases, managed matters so badly that the cost was materially increased. Of their inefficiency Captain Partington seems himself eventually to have been persuaded.

The contention of the plaintiff company that Mr. Cushing should be held responsible for the value of the hogs used for crushing the wood for fuel purposes and for the value of the fuel building, estimated at $10,000, is denied.

Mr. Cushing's contention that the wood was to be allowed for pulp and fuel on the basis of its value, as compared with round wood and coal, in which contention Mr. Cushing is declared always to have been consistent, is allowed.

In reference to the charge that Mr. Cushing had not delivered the quantity of wood charged for the judgment declares:

I do not think the evidence sustains the contention of the plaintiffs as to the quantity of wood delivered. It points to a different conclusion altogether. Invoices were regularly furnished to the company, they were open to the officers of the company. No such thing was suggested until this suit was commenced and there is no evidence to support it.

Mr. Cushing is declared to have strictly adhered to the arrangements made by the company with Captain Partington and to have been careful in all cases to carry out Captain Partington's instructions and that if these instructions were disregarded by any one it was by those whom Captain Partington had himself elected to represent him.

The following is a summary of the judgment;

Portions of the machinery sent out by Captain Partington gave constant trouble and caused constant loss. If it was sought to throw the responsibility of the losses of the company during the first ten months of its operation upon Mr. Cushing it was wisely abandoned, because the evidence does not support that view.

That the defendant did not interfere with any of Captain Partington's experts is abundantly proved. It is a little remarkable that while the plaintiffs' bill charges the defendant with a great number and variety of fraudulent and illegal dealings it contains no mention of the claim as to the fuel house. Neither was it put forward in any of the discussions that have at various times taken place between the parties. Mr. Cushing cannot be charged with the expense incident thereto.

The use of the mill wood from the defendant's mill, both for pulp and fuel, was in the contemplation of the parties when the mill was built. The evidence gives no support to the contention that the use of mill wood was merely an experiment, not only that but made at the defendant's risk and the expense of which in case of failure was to fall on his shoulders. The use of mill wood for fuel was not a novelty in this country, neither was its use for the manufacture of pulp still in an experimental stage. It was being used, and is now used, for both purposes profitably.

Mr. Beveridge, who differs from the other witnesses in many respects, agrees that the fuel house and its appliances, which he estimates to have cost $17,000, were necessary.

Mr. Ellis who, according to the evidence, was more successful than any of the other managers sent from England by Captain Partington, in his efforts to get the mill in working order, said that in his opinion the system of conveyors could not be improved.

Mr. Cushing's position on the question of payment for the wood has been consistent throughout, for he has always contended that although the price at which he invoiced the wood delivered to the pulp mill was a proper and reasonable one, it was subject to revision and it was by the agreement between the parties to be finally determined on the basis of its relative value to round wood and coal as shown by an actual test to be made for the purpose.

Captain Partington's position has not been always quite so well defined and the evidence shows that on more than one occasion he did, so far as he could, change the terms upon which he was willing to pay for the wood. The basis of computing the price according to the agreement should be according to its value as compared with round wood and coal. Mr. Cushing contended this should be determined by a practical test but that cannot now be made.

Two things are agreed upon, namely, that there is no difference in the quality of the pulp manufactured

from the two descriptions of wood and that the cost of hauling and cleaning mill wood is greater than that of round wood. It is obvious that the comparison is difficult, and the results can only be approximate. Stoppages seriously increase the cost of production. It is well known that in the early life of a manufactory like this mishaps occur. Such at all events was the case with this mill. The digesters, screens and barkers gave great trouble. It was suggested that these stoppages were due to some extent to the use of mill wood. It is due to Mr. Cushing for me to say that the suggestions are not in any way supported by evidence.

Mr. Clark's mill at Bangor, using slab wood, does a profitable business and the difference in results at the two mills is odd at first blush. The quality of the wood used, in my opinion, has contributed to the result. It does not pay to handle small wood, the waste is too great.

From the invoices I have reduced the wood to cords and comparing Mr. Cushing's estimate with Mr. Clark's at Bangor, have found the quantity of pulp wood to have been 16,029 cords and the fuel wood 16,225 cords.

Taking into consideration all the circumstances and relations that existed between the parties I think that the defendant is only entitled to charge for the pulp wood actually used by the mill at the rate of $1.90 per cord and at 90 cents per cord for fuel, allowing in addition the cost of hauling and piling. The wood taken by the plaintiff company from the field after defendant agreed to take it back must be paid for at defendant's price as piled.

The defendant's claim will therefore be $49,958.38 and the credit of amounts paid in cash and laths $52,391.30, leaving a balance due by defendant to plaintiff of $2,432.92. The 1,600 cords of wood left and which defendant has agreed to take back invoiced at $2,400, be declared to be the property of the defendant.

As to costs the judgment denies the plaintiff company any costs and decrees that the company shall pay to Mr. Cushing the costs of so much of the proceedings as the Lord Chancellor appointed in the case of Parker vs. McKee, wherein he said : "There is, however, on the other side a general principle as to the costs of the suit. It is in case a person has made himself liable to proceedings in equity or proceedings at law that the adverse litigant is entitled to make the court the place and the proceedings of the court the means by which personal spite or party hostility is enabled to indulge itself in unfounded aspersions upon character. In my opinion that has been done here. Unfounded aspersions have been wantonly and recklessly made and the consequence of that is that this court is obliged to give effect to what is so often said it would do—make persons so dealing with the proceedings of this court pay and pay full in costs for it."

The Montreal River Pulp & Paper Company, largely composed of Toronto capitalists, has been granted an extension of time for the completion of its works by the Ontario Government. The agreement with the company was entered into by the Government on March 3, 1902, and called for the expenditure of $100,000 within eighteen months of that date ; of an additional $200,000 within two years and another $200,000 within three years of that date. The mills are to be erected on the Montreal river or on the Ottawa river above the town of Pembroke. The incorporators of the company include Peter McArthur, of Detroit, and W. C. Philips, C. B. Warren, William Kerr and E. F. B. Johnston, of Toronto.

PERSONAL.

Hon. John Sharples, of W. & J. Sharples, Quebec, has again been elected Mayor of Sillery.

Mr. Aaron Wilson, who carried on a lumber business at Little River and Blois Mills, N.B., died in St. John recently.

Mr. W. Price, lumber merchant, of Qnebec, has accepted the nomination as Independent Conservative candidate for the County of Rimouski at the next Dominion election.

Hon. John Charlton, M.P., has for some time been confined to his home at Lynedoch, Ont., from illness, said to be the result of overwork. It is believed that he will retire from politics.

Mr. George Chew, of the well-known lumber firm of Chew Bros., Midland, Ont., is the unanimous choice of the Liberals of East Simcoe to contest that riding at the next provincial election.

Mr. J. G. Jardine, Canadian Trade Commissioner for South Africa, has recently been on a visit to Canada. While in Toronto he was confined to his room for some time with an attack of la grippe.

Mr. A. D. Caswell, of the Georgian Bay Lumber Company, Waubaushene, has taken unto himself a life partner, in the person of Miss Eplett, of Coldwater, Ont. The event occurred on December 23rd, Rev. A. T. Ingram officiating.

Mr. A. R. Miles, of Maugerville, lumber scaler for the New Brunswick Railway for a number of years, has accepted a similar position with the New Brunswick Government and will have charge of the Upper Miramichi and Lower St. John district.

Mr. G. W. Henderson, acting manager for the United Lumber Company, Halifax, N.S., has been recently appointed manager the Gaspereau Lumber Company, which of operates about 45,000 acres timber land in the neighborhood of Kentville, N.S.

Mr. George Mason, one of Ottawa's prominent lumbermen, died in that city last month, in his 66th year. He was a member of the old firm of William Mason & Sons and had resided in Ottawa for forty years. His father, William Mason, was one of the pioneer lumberman of the Ottawa Valley.

The citizens of Rat Portage, Ont., recently tendered Mr. D. C. Cameron, M.P.P., a complimentary dinner. Mr. Cameron served for three years as Mayor and is about to take up his residence in Winnipeg, where the Rat Portage Lumber Company, of which he is manager, have built a large saw mill.

A most unique dinner party was held at the King Edward Hotel on last New Year's Day, Mr. W. F. Rittenhouse, a Chicago millionaire, being the host. Mr. Rittenhouse, who is president of the Arkansas Lumber Company and of Rittenhouse & Embree, Chicago, brought at his own expense some seventy school friends to Toronto from different parts of the United States and Canada. Upon arriving at the hotel they became Mr. Rittenhouse's guests. A reception in their honour was held on New Year's Eve at the residence of Mr. F. H. Smith, on Tyndall Avenue. The dinner was held in the banquet room of the King Edward Hotel New Year's night, and was a very pleasant re-union.

TRADE NOTES.

The Northwest Machinery & Iron Company has been incorporated under the laws of Manitoba, with headquarters in Winnipeg and a capital stock of $40,000.

The Stevens Company of Galt, Limited, has been incorporated to acquire the general machine and tool manufacturing business of Stevens & Company in that city.

We have received from Lewis T. Kline, Alpena, Mich., copy of a new catalogue of excelsior and turning machinery, accompanied by a small sample of excelsior made on his machines.

The Syracuse Smelting Works are now producing at their plant in Montreal a brand of ingot copper that will be called the "M.C.C." which will be the first ingot copper produced in the Dominion of Canada. Their output will be ten tons every twenty-four hours.

The B. Greening Wire Company, of Hamilton, have favored their many customers with a useful office calendar, designed to serve as a constant reminder of their facilities for executing orders for wire goods of all kinds. Their eastern warehouse is at 422 St. Paul street, Montreal.

Mr. Madison Williams, manufacturer of saw mill machinery and equipment, of Port Perry, Ont., has recently returned from a trip through Western Canada. While in Winnipeg he arranged with the Manitoba Iron Works, Limited, to represent him in the west, and this firm will hereafter carry a full line of his machines.

Our attention has been called to the fact that a mistake was made in sending us the engraving for Messrs. Clark & Demill's advertisement in our January number. Hence, the machine shown in their advertisement was not the one to which the decription referred. Reference to the advertisement in the present issue will show the machine to which the description applies.

One of the prettiest calendars which we have received bears the compliments of Messrs. McClure, Zimber & Company, hardwood lumber manufacturers and dealers, Detroit, Mich. It is a landscape calendar showing four fac similes of paintings reproduced by color photography. The subjects are "An Old Mill," "A Summer Night," "The Close of Day" and "The Road to Bruges."

Mr. Alfred Rubbra, Machinery Exchange, Montreal, has been appointed agent for the province of Quebec for the celebrated high-grade Barry saws, manufactured by the Barry Saw Works, Indianapolis, Ind., U. S. A. Mr. Rubbra will carry a stock of all sizes of circular saws at his extensive warerooms, 22-24 Victoria square, and will be pleased to give price and all information in reference to same.

LUMBER INSURANCE.

The Lumber Mutual Fire Insurance Company, of Boston, Mass., advise us that having closed the year 1903, the directors will be recommended to continue 30 per cent. dividendi htdanoeir 1902 policies at their expiration, which made a saving to the trade on their 1902 insurance of over $25,000. The total dividends this company paid to date are $76,220.25, and the 30 per cent. dividend which is to be recommended on 1903 policies will require the payment in dividends of about $35,000.

The Lumber Mutual Fire Insurance Company advise us that they had a very successful year in 1903, the estimate of premiums in force at the end of the year being overrun by $6,000, while the losses incurred were just within the estimate. No other company insuring lumber risks, it is claimed, has had as regular and steady business with neither exceedingly large losses nor abnormally small losses within the year. This is attributed to the company's policy of conservative underwriting and small lines accepted.

CLARK'S PORK & BEANS

are the best made in Canada and equal to the finest imported. **Clark's Canned Corned Beef** knows no superior. Get quotations from your jobber.

PUBLICATIONS.

The initial number of the British Columbia Lumberman, published in Vancouver, B. C., has reached our desk. It contains 24 pages and cover and is a creditable production, many pertinent subjects affecting the lumbering industry of British Columbia being treated in an able manner. The proprietor is Mr. Jos. Houghton, and the business manager Mr. J. Todd Lees.

Calendars have been received from the following firms: Dominion Belting Company, manufacturers duck belting and belt dressing, Hamilton; Frank A. Cutting, dealer in hemlock bark and manufacturer of the Cutting patent bark car, Boston; Standard Lumber Company, manufacturers and wholesalers hardwood lumber, Buffalo; O. E. Yeager, hardwood lumber, Buffalo; West & Peachy, manufacturers alligator tugs, etc., Simcoe, Ont.; Auger & Son, lumber, pulp wood and ties, Quebec.

No Agents. All business Transacted direct.

FIRE INSURANCE ON LUMBER ONLY . .

20% reduction off tariff rates.

We accept lines ranging from $10,000 to $40,000 on lumber piled 100 ft. or more from mill. Describe conditions and rates will be quoted promptly.

TREATMENT OF BAND RESAWS.

Band resaws, says a writer in the Mechanic, require essentially the same treatment as band saws. They must be strained most near the toothed edge. Teeth must be of a length, with full swaging, evenly balanced or side-dressed, to cut a line.

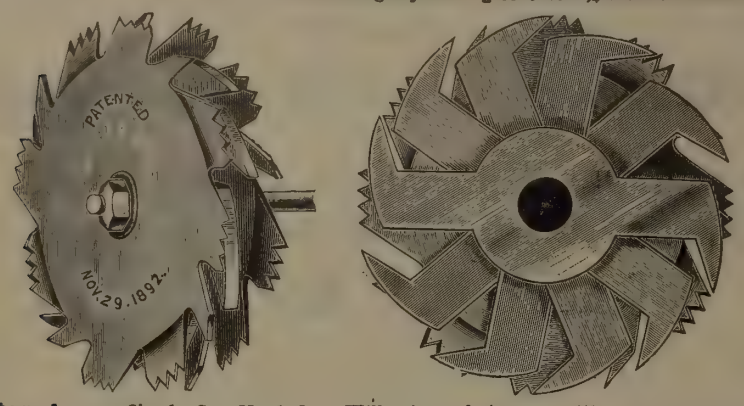
Modern band resaw mills are now made with iron wheels perfectly balanced and true, with the face made approximately flat or slightly convex, so that the tension of the saw may be readily adjusted to suit the face of the wheels. This condition met, it is requisite that the face of the wheel shall be kept perfectly clean, as any adherence of sawdust, gum, pitch or dust, if allowed to accumulate near the base of the tooth will almost certainly change the strain of the saw on the mill to an extent that will cause a fracture.

Filers are agreed that the back of the saw should show slightly convex, the amount depending somewhat on the form of the wheels and whether the cross line is used. A convexity of 1-64 of an inch in 5 feet is considered good for band resaws.

The proper tensioning and fitting of resaws is a more delicate process than the similar fitting of band saws, for the resaw is not only much narrower, but also of much lighter gauge. Thus, while the tension of a 12-inch band saw, 14-gauge, may be put in so that the main strain comes not nearer than 1½ to 2 inches to the points of the teeth, the strain and stiffness of the wide blade serves to support and steady the teeth so that they run practically true. But in the band resaw from 4 to 6 inches wide, and from 18 to 22 gauge, you must depend entirely upon the up and down strain supporting the cutting edge, and must, therefore, tension the saw almost from edge to edge. It is well to make use of a small tension gauge which can be furnished to suit usual conditions, or can be reshaped for special work, if desired.

HUTHER BROS. PATENT GROOVER OR DADO HEAD

For cutting any width groove from ¼-inch to 2 inches or over



Can be used on any Circular Saw Mandrel. Will cut a perfect groove with or across the grain.

This is the only Dado Head on the market that gives entire satisfaction on all classes of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of woodworking machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense. ALWAYS SOMETHING NEW.

The lumber manufacturer or logging operator who does not read carefully his trade journal is sure to miss many ideas which would be found useful to him in his business. The pages of the CANADA LUMBERMAN contain the advertisements of the most wide-awake manufacturers of saw-mill and wood-working machinery, logging appliances, etc. Every month some new and improved appliance is placed on the market. Keep up with the procession by investigating the adaptability of these appliances to your own particular case, and when the opportunity is presented tell the advertiser how interested you are in his announcements in THE LUMBERMAN.

NOTE.

The Cornwall Paper Manufacturing Company has called for tenders for the erection of new works at Mille Roches, Ont., near the town of Cornwall, on the St. Lawrence river. Work on the structures will be begun as soon as the weather permits. The company is a new one, organized last year.

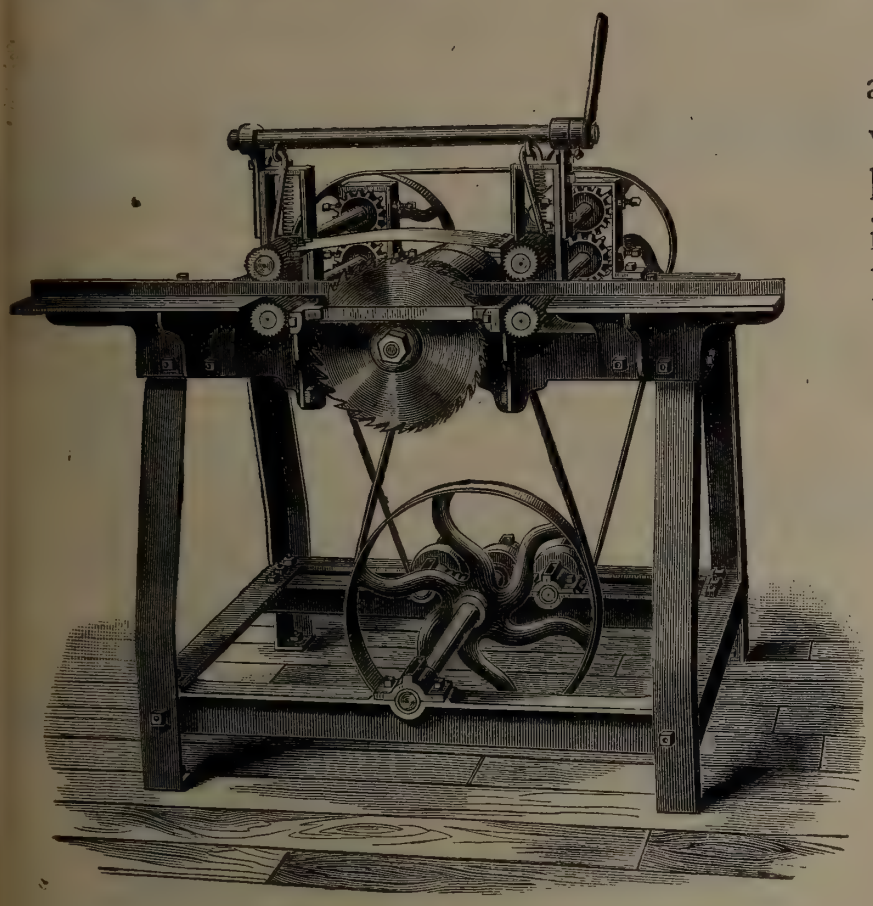
GANG LATH MACHINE



This machine carries four 12 inch saws, and is fitted throughout for continuous, fast work. The frame is a solid iron casting with long bearings for saw arbor cast in place. So it is impossible for the arbor ever to get out of line. The drive pulley on arbor is 8 inch dia., 9 in. face, turned inside and out and firmly balanced.

This machine in connection with the Lath Bolter—its companion—is capable of turning out an immense amount of work every day, probably more than any other machine in the market at the same price.

I also make other very heavy fast cutting Lath Machines and Bolters and guarantee them in every particular. I sell cheap too.

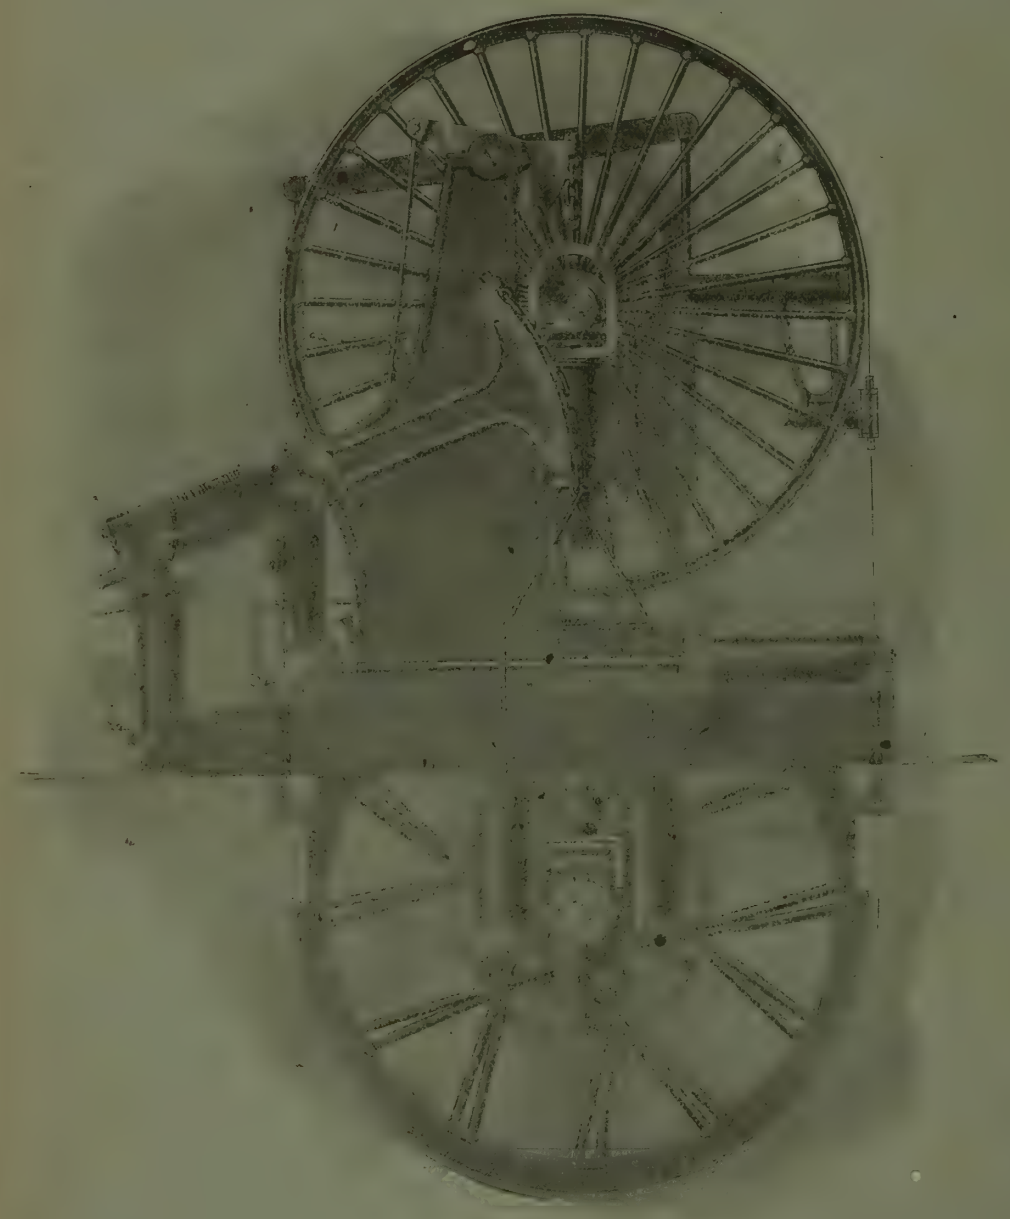
SHINGLE SAWS

The

STEAM TENSION BAND MILL

For Single and Double Cutting



Has the simplest and most sensitive straining device, and because the tension of the saw is always just right, this mill cuts better lumber than any other.

When changing saws no time is lost raising and lowering top wheel, and taking off and putting on strain on the saw, as in other mills.

All the adjusting mechanism is out of the way of lumber, and removed from sawdust and dirt.

It is being installed in all the largest and fastest cutting mills in the country.

It will pay you to investigate this mill.

We have an interesting booklet telling all about it. Write for a copy.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

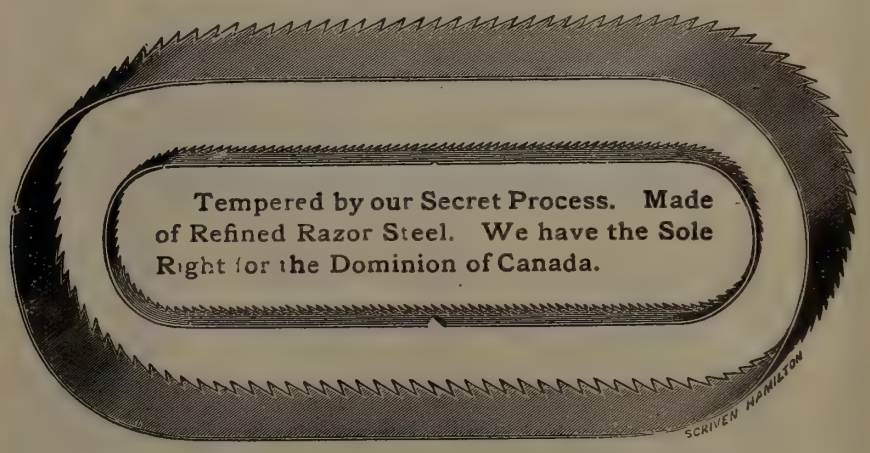
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



We Manufacture

HIGH GRADE BAND SAWS

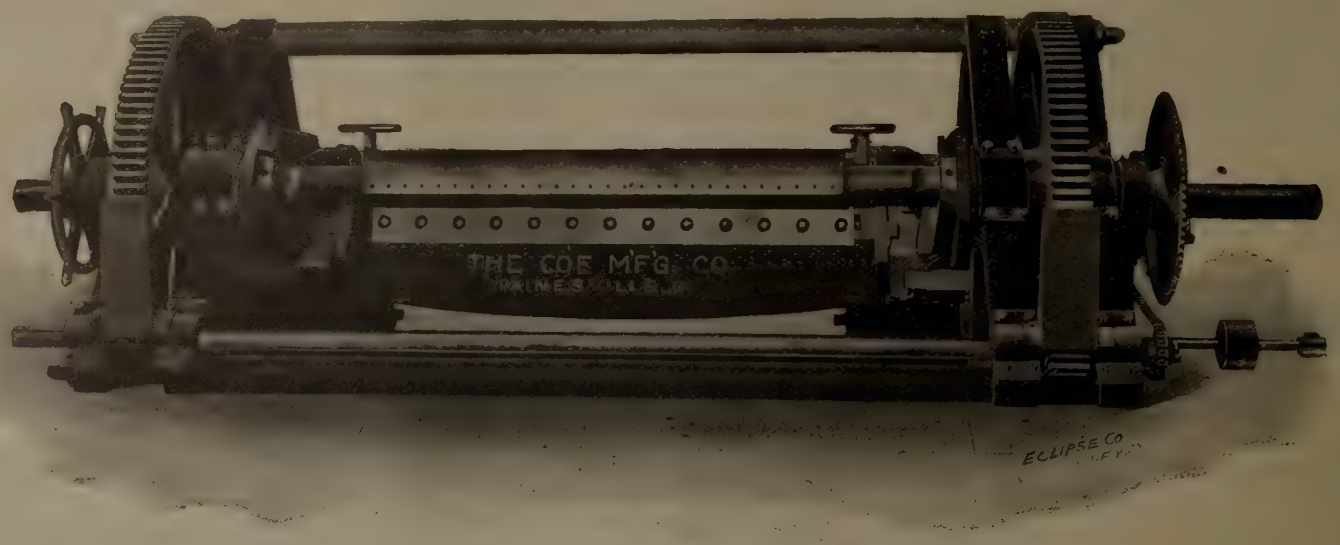
Of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

Our Celebrated

Rotary Cutting Veneer Machines

made in over sixty sizes, have stood the test and proved equal to any proposition to reduce logs into thin lumber and veneers.



The product is high grade.
The output is great.
The cost of operating and maintenance is reduced to a minimum.
Quite a combination, is it not ?

Timber and mill owners should get in early.
Buy a Coe Veneer Cutting and Drying outfit and prepare to supply thin lumber and veneers which have a healthy growing demand. More money in it than sawing your logs into lumber.

PROMINENT BRITISH COLUMBIA LUMBERMEN.

MR. J. G. SCOTT.

Among the lumbermen of British Columbia who have risen by patient industry and by the exercise of considerable ability is Mr. J. G. Scott, manager of the Pacific Coast Lumber Company, of Vancouver, whose portrait accompanies this article. Mr. Scott has been twelve years in the province, and during that time has seen the trade with Eastern Canada and the middle West grow from nothing into great proportions, while he himself is now manager of a mill which is acknowledged even by compeitiors to have the most modern and complete plant of any in British Columbia, Washington or Oregon.

Mr. Scott is an Ontario boy, like many others in the west. He was born at Stratford, and was early connected with the lumber industry. He was first with the Medonte Lumber Company, which had large limits in Simcoe County, and with his brother, Mr. A. A. Scott, now of McGregor, Ontario, secured full interest in this concern, and operated it under the name of Scott, Scott & Company. When, in about eight years, the limits owned by this company were worked out, Mr. J. G. Scott came to the Pacific Coast. This was in 1891, and with Mr. George McCormick, M. P. for Muskoka and Parry Sound, and Mr. William Irwin, of Peterboro, he started the Pacific Coast Lumber Company in New Westminster, on the banks of the Fraser river. This was run in a quiet way, with the ultimate intention of building up an industry of large proportions, and in the present large mills this ambition has been realized.

During his residence in New Westminster, known as the Royal City, Mr. Scott took an active interest in municipal affairs and for three years was a member of the city council, the first of which he served his fellow citizens as chairman of the Board of Finance. In 1900 and 1901 he was Mayor, and in the latter year took up his residence in Vancouver. Mr. Scott with other representative citizens of New Westminster were actively interested in the management of the great exhibition of the west, held yearly at New Westminster by the Royal City Agricultural and Industrial Association. He escaped the conflagration of 1898, which practically destroyed New Westminster, but in 1901 the mills were completely razed by fire. Then he removed to Vancouver.

The mills in Vancover are located on Coal Harbor, the western extremity of Burrard inlet, and within a stone's throw of Deadman's island, the place where in 1898 Theodore Ludgate made such a strong effort to establish a saw mill. There was opposition to the Pacific Coast Lumber Company securing a site on this part of the harbor foreshore, but with the usual discretion and management which has characterized his work, Mr. Scott had firmly entrenched himself by securing before-hand a proper right and title from the government. Mr. W. J. Sheppard, of Waubaushene, Ontario, president of the Georgian Bay Lumber Company, is president of the company, and there are a large number of other shareholders resident in Ontario. Mr. McCormick and Mr. Irwin are still interested with him. There has been an expenditure of over half a million dollars on the establishment since its inauguration about three years ago, and to-day it is the best laid out, the neatest, and most adapted for economical manufacture of any mill on the coast. It has a capacity of 150,000 feet of lumber, 300,000 shingles, and a planing mill with a capacity of 75,000 feet per day of ten hours.

MR. J. G. SCOTT,
Manager of the Pacific Coast Lumber Company, Vancouver, B. C.

Mr. Scott had a difficult and long uphill fight in the early days of his connection with the industry in this province in seeking to establish a market for the British Columbia product in the east. He shipped the first carload of red cedar shingles to Ontario in 1892, and there are still those in Toronto and other cities who will remember telling him that he was not exactly right in his head to think of such a preposterous thing as endeavoring to create a market at such a remote distance. Everything was an experiment then, but Mr. Scott, with the keen foresight of the successful business man, predicted that the time would come when British Columbia shingles would be in demand in Ontario, and in a decade he has seen this prophecy verified. To-day red cedar shingles are used in Ontario very largely. The development, however, was slow, and the trade unremunerative. It was necessary to have the quality of the article tested in a practical way, and while this was expensive, the result has proven that in the long run it was a good business move. Mr. Scott has demonstrated that what was deemed an utter impossibility by Ontario dealers who could not view the future was overcomeable by persistency and the production of an article which is not surpassed in the world to-day. Possessed with executive ability of no mean calibre, Mr. Scott has made a success of the business from the start.

Since Mr. Scott transferred his business interests to Vancouver, he has become one of the leading citizens of that city. He is not an active politician, is a strong Presbyterian and is Chairman of the Board of Managers of St. John's church, Vancouver, having been one of those connected with the establishment of this place of worship, which has just closed a veey successful first year. He is one of the three trustees in whom is vested the ownership of the property. Mr. Scott married in 1887 Miss Eliza Stewart, of Guelph, Ontario. He is a prominent member of the Masonic fraternity, and is past master of Union lodge No. 9, New Westminster, one of the earliest established lodges in the province.

A GOOD PAPER.

Mr. R. R. Sinclair, Sherbrooke, Que., writes: "I have been taking THE CANADA LUMBERMAN for two or three years and find it a very good paper. Please send it for another year.

E. A. Holsten, of the firm of D. E. Holsten & Co., Duluth, Minn., is establishing a sash and door factory on Logan auenue, Winnipeg.

LOG PRODUCTION CURTAILED

Reduced Output in Ontario and Quebec Owing to Deep Snow and Generally Unfavorable Logging Conditions.—The Production in Other Provinces About Same as Last Winter.

In view of the widespread interest which is shown this spring concerning the quantity of logs which will be available for the season's sawing, the publishers of the CANADA LUMBERMAN addressed a letter of inquiry to a number of operators asking whether their production of logs would be greater or less than last winter, and to what extent. The replies, which are printed below, show that on the whole the winter has been unfavorable for work in the woods, and that in Ontario, owing partly to the deep snow, the cut was exceptionaly light.

PLAYFAIR & WHITE, Midland, Ont. : Our cut of logs this winter will be from 10 to 15 per cent. less than a year ago. If the cost of production, caused by deep snow, cold weather and poor ice in the lakes, together with poorer class of men for our work, is any criterion, the price of lumber should surely advance the coming season. As far as we can learn the log production in the Georgian Bay district will be fully 20 per cent. less than a year ago.

G. H. PERLEY & CO., Ottawa, Ont : We expect to make between five and ten per cent. less logs than we did last season. We had a very fine fall for making logs, but all work during this winter has been expensive and slow. There is no frost in the swamps and in most places the ice on the lakes is bad. It is possible that we may have an old-fashioned March in this locality, and in that case the lumbermen would be able to go on making logs in some sections of the country. On the whole, there seems no doubt that the quantity of logs taken out this winter must be very much less than it was last year.

SHEPARD & MORSE LUMBER CO., Ottawa, Ont. : We expect to make about 15 million of logs at our Kippewa shanties this year, as against about 11 million last year. We may say that this winter has been unusually satisfactory for logging in the Kippewa district, the snow not being over 2 or 2½ feet, with fine, steady weather. Usually this district is noted for its heavy snow falls, but it seems to have been favored this year with a light fall.

PEMBROKE LUMBER CO., Pembroke, Ont.: Our bush operations are progressing very favorably and our hauling is about completed. We have experienced very deep snow, but otherwise a good winter. Our cut of logs this year will be about twice that of any former year. The advanced cost of taking out logs this year is owing to the labor maket principally.

GILMOUR & HUGHSON, Hull, Que.: Last August, owing to threatened depression, the scarcity of and difficulty of obtaining good labor, we gave instructions to curtail our output by 20 per cent. At the present time the snow is so deep that we have found it advisable to stop all log making, which will have a further tendency to reduce our cut for this winter.

THE KNIGHT BROTHERS COMPANY, Burks Falls, Ont.: We submit the following information regarding our production:

Hemlock and other softwood logs, 1902-3		1,725,312 ft.
Birch and other hardwood logs	,,	782,367 ft.
		2,507,679 ft.
Hemlock and other softwood logs, 1903-4		1,742,582 ft.
Birch and other hardwood logs	,,	600,301 ft.
		2,342,883 ft.

We find the cost of logging this season has been rather higher than last owing to the excessive snowfall; wages are very high and many workmen inefficient. Our stock is not all delivered at the dumps, and there may be a small proportion left in the woods.

THE CLEVELAND-SARNIA SAW MILLS CO., Sarnia, Ont.: Our cut of logs will be practically the same this year as it was last year. We expect, however, to get out about one and one-half to two million feet more than last year.

THE SNIDER LUMBER CO., Gravenhurst, Ont.: Our stock of logs for this season's cut is about seven million feet of hemlock, which is about one and one-half million feet less than we expected to get out. Quite a quantity of logs are being left on skids, it being impossible to get roads to the skidways in order to haul them. Logs that were got to water are costing at least $1.50 per M. more than they would have cost had the winter been more favorable.

AN OTTAWA VALLEY MANUFACTURER: We think the log output will be smaller than usual, as owing to high wages last fall it was late before men were all at work, and in our case we did not put in as many, only figuring on keeping our own teams busy and not having any hired teams hauling. The snow has also been deep and hauling slow and expensive.

ONTARIO LUMBER COMPANY, Toronto, Ont.: Our output of logs this winter will be less than half of last year's output; we had seven large shanties in the woods last winter (a year ago), and this winter we have only three. The conditions which tended to shorten the output were, in the first place, scarcity of men, which continued until the arrival of the snow, at which time we had to quit cutting logs owing to its great depth. The scarcity of men and the snow proposition have increased the cost of our cut at least 30 per cent. When the snow came there was no frost in the ground, and the consequence will be that when we have a break-up it will be very sudden because of the heat in the ground, which will melt the snow from the bottom; and we fear, in consequence of this, that we will have low water in the spring for driving creeks, as you are aware that when there is a heavy frost in the ground before the snow comes it holds the water and it runs off gradually. This year we expect a tremendous rush all of a sudden and consequently a short time for driving creeks.

J. D. SHIER LUMBER CO., Bracebridge, Ont.: We will have about as much hemlock this coming year as we had in 1903, but we do not think that this is the case with most of the lumbermen. The only way that we got out our usual stock was by starting in very early in the fall, and any of those lumbermen who left it until after the first snow came will not get out more than about 50 per cent. of their usual stock; we think that there will be quite a serious shortage in hemlock this coming year. In reference to pine, we expect to have 2,000,000 feet more than we had last year. There is going to be a very short crop of hardwoods this year owing to the depth of snow, and what has been taken out has passed out of first hands in nearly every case. Our representative has been north from here sizing up the situation, and he found that these stocks are pretty well bought up and by parties who can afford to hold out for a fair price. It is our opinion that hardwoods will advance from $2.00 to $3.00 per M. over last year's prices. We do not anticipate any shrinkage in the price of pine either; in fact, from what we have learned we think there will be an advance of from 10 to 15 per cent. all round.

THE HUNTSVILLE SYNDICATE, Huntsville, Ont.: We have not had exact figures in yet, but all our camp managers report a shortage from last year's cut owing to the deep snow and severe weather. We estimate the season's cut of hardwood in this district and north as far as North Bay to be not more than two-thirds of the quantity taken out last year. This shortage, together with the extra cost of getting out logs (owing to unfavorable weather) will result in a considerable advance in the prices of lumber.

KEEWATIN LUMBERING & MANUFACTURING COMPANY, Keewatin, Ont.: As to the probable supply of logs for next season, our cut will be about the same as last season, and with what we have left over from last year we will have available for sawing about 20,000,000 feet. In addition to pine logs we are also getting out tamarac and jack pine to make 300,000 ties and will erect a mill this spring to saw ties exclusively.

J. D. IRVING, Buctouche, N.B.: The cut of lumber for shipment from this port for next season will be from one to one and one-half million feet less than last winter. The very severe weather all through the season has seriously interfered with all operations.

T. CROCKETT, Riviere-du-Loup Station, Que.: The production of logs from my own operations this winter will be in the vicinity of five million feet of spruce and cedar, compared with two million feet last year. The production in general, however, in this locality will be as near as I can ascertain about 25 per cent. in excess of last year. The conditions peculiar to this winter's operations have been most favorable as far as weather and snow are concerned. Wages and supplies have been about 20 per cent. higher in cost than last year, with very little change in the market. The large cut this winter with the amount of logs held up in the streams last season, with favorable driving conditions this spring, will have a tendency to put an excessive quantity of logs on the market.

LOVELAND & STONE, Cutler, Ont.: As for ourselves, we are taking out about the same quantity of saw logs that we took out last year, and with what we carry over will have some thirty million of logs to saw at Cutler. From all we can see and learn the quantity of timber that will be brought through the Spanish boom will be about one hundred and sixty or seventy million feet, which is about the same as last year. The Spanish boom, as you know, takes in the Vermillion river with its tributaries, the Onaping river, etc., the main Spanish and its other tributaries. While here, like everywhere else, we have had a severe winter, still we do not see that it has affected the taking out of logs to any material extent.

FRASER & CO., Ottawa : The production of logs by our firm this season will somewhat exceed that of season of 1902/03 for the reason that our mill is now complete, and we want stock enough to run it through the coming summer. Deep snow, high wages, and supplies generally dearer than for some years past, will cause the output of logs in this section to cost more than usual.

JOHN MILLARD, Liverpool, N.S.: My cut this year will exceed three million feet, mostly pine and spruce. The cut on our river this year will be small compared with other years. We have had a very severe winter, snow now in the interior being about 4 feet deep on the level, which puts us back very much in getting our timber to the water. Our drive by water is about fifty miles.

KELLEY BROS., River Hebert, N.S.: Our cut of logs will be four million, which is greater than usual by say a million to a million and a half. This excess of cut is caused by forest fires, as to save the timber we are obliged to cut it as soon as possible. The cut will be two million scantling and boards, balance 7s, 9s and 11s. The deep snow will affect the cut somewhat, as teams have been coming out for the past week.

MICKLE, DYMENT & SON, Gravenhurst, Ont.: Our stock will be fully as large as last season, as our camps filled ealier. The skidding operations were favorable, but the haul has been expensive owing to the extra deep snow, involving a continual snow ploughing and shovelling. The production by camps in this district will probably fall short 20 per cent., the production of logs got out for sale apparently a good 50 per cent. short.

J. O. Gilbert & Sons, of Bishop's Crossing, Que., have recently acquired the Gilbert's Mills property at Gilbert's Mills, Bury, Que., formerly owned by them. It is understood they intend to thoroughly repair them and install a band saw equipment and shingle and planing machinery. The power will be water and steam connected to the same driving shaft.

HOO-HOO NIGHT IN WINNIPEG.

A concatenation of the illustrious order of Hoo-Hoos was held in Winnipeg on Saturday evening, February 13th.

The gathering was a howling success, there being a large attendance and no less than twenty-two initiations. The Snark of the Universe, G. B. Housser, of Portage la Prairie, presided, and maintained proper feline decorum. He was ably assisted in his task by Messrs. D. B. Sprague and J. C. Graham, ex-vicegerent, both experienced hustlers. The notice summoning the roof-top conclave read as follows:

"Dear Brother Hoo-Hoo: The fifth annual meeting of the Concatenated Order of Hoo-Hoo will be held in Eureka hall, Main and Notre Dame streets east, Winnipeg, on Saturday, February 13, 1904, at 8 o'clock. Fail not to be present and assist in conferring higher degrees upon newly born kittens from the onion bed, and watch the singeing of the fur while the old cats purr; as the buffalo roams around, the shadows of night will be turned into day in old Winnipeg town, and things will be done up brown. Good Hoo-Hoos cannot afford to stay away.

"The Hoo-Hoo while in Winnipeg will show the town that they are not slow. The Black Cat will be in evidence, both on the roof and on the ground, wearing the symbol of the jumping Black Cat of the Egyptian heights in their button-holes. They'll give the good old Hoo-Hoo yell. They're sure to take in every sight, by day and by electric light: (There are numerous sights to see). This night Hoo-Hoo will own the town of Winnipeg of great renown.

"Here's hoping you'll have lots of fun.

"G.B. HOUSSER, B.F.F.O.F.G.S.B.C.,
Vicegerent.

Every preparation had been made for the reception of the kittens, a fact which each of them fully realized before he got through.

When all the Tommies, and they were a gay lot, had foregathered in their accustomed corners and had purred themselves into a state of happy contentment, they proceeded to elect officers for the concatenation then being held, with the following result:

Snark of the Universe, G. B. Housser, Portage la Prairie.

Senior Hoo-Hoo, J. J. Foss, Winnipeg.

Junior Hoo-Hoo, Harry G. Wallace, Minneapolis.

Bojum, J. C. Graham, Winnipeg.
Scrivenoter, Jey Spencer, Crookston.
Jabberwock, D. L. Lincoln, Winnipeg.
Custocatian, D. B. Sprague, Winnipeg.
Arcanoper, Jas. A. Ovas, Winnipeg.
Gurdon, D. J. McDonald, Port Arthur.

The Supreme Nine having been chosen, the kittens, one of the best classes yet presented for initiation to the riotous mysteries of the roof-top and garden, were admitted one by one to the sacred garden where they took the obligation, tested the human flesh, pressed their lips to the seal of the Black Cat and had their eyes opened, and thus became privileged to enjoy all the fun and benefits of a Hoo-Hoo roof-top. The old Tommies were delighted to receive in their midst so many promising kittens, and were not backward in manifesting their pleasure.

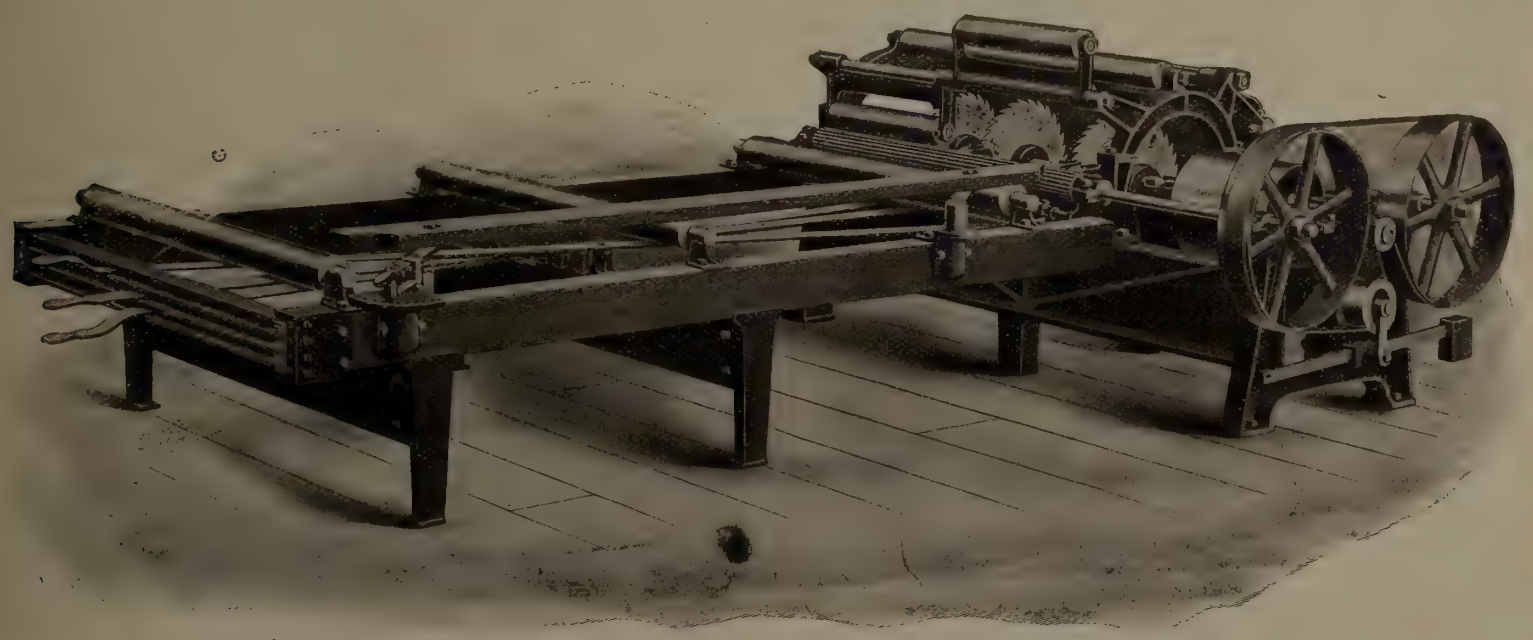
The candidates were: R. J. Smith, G. N. Railway; C. J. Archibald, Nelson, B. C.; Chas. W. Owen, Imperial Elevator Company; Oliver K. Godfrey, Canadian Elevator Company; W. J. Hunter, G. T. Ry.; G. H. Wall, Winnipeg; Andrew McKinney, Canadian Elevator Company; P. H. McIntosh, Prairie Lumber Company; Thos. Dunn, Winnipeg; D. Robertson, Rat Portage Lumber Company; G. M. Fraser, Indian Head; R. G. Jones, A. H. Wood, Canadian Elevator Company; Geo. McKinny, Sintaluta; A. Smith, C. P. R.; Arthur Harry, Canadian Lumber Company; Harold T. Burntrager, Pacific Coast Lumber Company, Vancouver; James Conn, Indian Head; Hugh W. Kennedy, Rat Portage; John J. Shortwell, St. Paul; Walter Ross, Rat Portage.

At the conclusion of the concatenation, which was declared by all to have been both enjoyable and profitable, all the Hoo-Hoos, old and young, sat down to a delicate spread provided by Mrs. Hample.

A NEW EDGER.

In the general equipment of a saw mill, certain machines have become almost standard in their construction, and the manufacturers show little desire to depart from general lines. This is particularly true of edgers, trimmers and the like. Occasionally a manufacturer introduces some changes, but as a usual thing they are unimportant. This being the case, it is a hard proposition for a manufacturer to produce a new machine, say an edger, which shall have enough points of superiority to recommend it to the user and still compete with standard machines. William E. Hill & Company, of Kalamazoo, Michigan, believe that they have accomplished this, however, in the machine that illustrates this article, and claim that they have produced a first-class edger which they can sell at a moderate price and one which has many points of superiority over those of other manufacturers.

The machines are very heavy and are built in two widths, 45" and 48", with either three saws or four saws as desired. The main frames of the machine are so designed that the great weight is distributed so as to give the greatest strength. The cross girts and pressure roll frames are so strong that it is impossible to break them. The arbor is of heavy forged steel 3¼" diameter and has balanced driving pulley. The saws are shifted by hand levers of peculiar design, which move very easily and which can be set to cut any width. The board guide is positive in its action and can always be depended on. There is one 4" feed roller in front of saw and two behind. These are milled from solid bar, not cast.



A NEW EDGER MANUFACTURED BY WM. E. HILL & COMPANY.

This will give the reader an idea of the careful attention to detail which is so noticeable in studying the construction of this machine. The front pressure rollers are 4 in. in diameter; the rear pressure rollers are 8 in. The widest board that can be edged on a 45-in. 4-saw machine is 28 in.; on 48 in., 31 in.; 18 in. and 20 in. saws are used. Width over all, 45 in. machine, 7 ft. 3½ in.; width over all, 48 in. machine, 7 ft. 6½ in.; length with both tables, 24 ft.

If any of our readers are in the market for an edger, we would suggest that they write William E. Hill & Company, 415 North Rose street, Kalamazoo, Michigan, for blue prints and prices and a copy of their new Catalog B.

The Department of Indian Affairs recently granted to H. Williams a lease of a mill site on the Indian Reserve at Fort Frances, Ont. One-half of the property has been transferred to the Preston-Bell Company, who will build a saw mill and wood-working factory.

THE Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance, $1.00
One Copy, Weekly and Monthly, Six Months, in advance, 50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these nterests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

THE WESTERN LUMBER SITUATION.

A wise move has been taken by the various Canadian interests which combine to furnish the lumber supply of the West. One month ago there were threats of new competition, such threats being based, as later events show, on an erroneous conception of the profits to be derived from the manufacture of lumber. These interests have come together and discussed the situation in a friendly spirit, with the result, as usually happens, of arriving at a much better understanding of the real conditions.

A conference of the British Columbia lumber manufacturers and the retail dealers was held in Winnipeg early in February, at which a committee was appointed to interview Mr. Whyte, vice-president of the Canadian Pacific Railway, on the question of freight rates. The manufacturers agreed to make a reduction of $1 per thousand feet in the price of lumber if the C.P.R. would give a reduction of two cents in the freight rate, making the rate from the Coast thirty-eight cents instead of forty cents per hundred-weight. Mr. Whyte expressed himself favorably on the matter, and will, it is thought, recommend to his company that the concession be granted. The manufacturers will thus receive for their lumber within 50 cents of what they have received in the past, the reduction in freight representing the other 50 cents which goes to make up the dollar reduction. Although no announcement is made, it may be presumed that the retailer's margin of profit will remain the same and that the consumer will be given the benefit of the reduced price.

The advantage of the above arrangement is that it will tend to lessen the quantity of lumber imported from the United States and give increased business to the Canadian mills and in turn to the C.P.R. This increased business is expected to offset the reductions made.

Any plan calculated to reserve the Canadian market for the Canadian manufacturer cannot be too strongly commended, particularly in view of the indifference of the Dominion Government towards affording a reasonable measure of protection for the lumber industry. The justice of the protection asked for is admitted even by the Mississipi Valley Lumberman, which in a recent issue remarks: "Considering the tariff on Canadian lumber that comes across the line into the States, the Canadian manufacturers are hardly to be blamed for taking steps to protect their home markets."

THE ONTARIO TIMBER SUPPLY.

A number of statements were made by Hon. E. J. Davis, Commissioner of Crown Lands, in his speech in the budget debate in the Ontario Legislature recently, which are important to lumbermen as well as to the people generally. A low estimate, Mr. Davis said, showed that there were still ten billion feet of good white pine standing on the Crown lands of the province, sufficient to permit twenty such sales as were held on December 9th last. He placed the value of this timber at $75,000,000, and the dues at the rate of two dollars per thousand feet would amount to $20,000,000. Basing a calculation on Mr. Davis' figures, it would appear that there are 500,000,000 feet of pine timber on the area disposed of at the last sale, and as approximately $3,687,000 was realized for these lands, the bonus price was an average of a little over $7 per thousand feet for the timber on the stump. To this must be added $2 per thousand stumpage dues, also ground rent, making the cost of the standing timber to the purchaser above $9 per thousand feet. It has until recently been considered that $6 per thousand feet was a fair price for timber on the stump, but apparently there is no limit to the value of white pine.

While, as Mr. Davis admits, the estimate of the white pine still in the hands of the Crown is somewhat approximate, it is contended to be sufficiently accurate to prove that there is still a very large quantity standing in the province. But as the demand upon the white pine supply is gradually increasing, it is pertinent to inquire how long at the present rate of consumption the supply will last. This question cannot be answered with any degree of certainty, but it may be interesting to make one or two deductions based on the figures of the past. The report of the Commissioner of Crown Lands shows that during the year 1902 the cut of pine timber on the Crown lands was about 700,000,000 feet. Taking this estimate as the average cut for future years, the timber on unlicensed lands would last for a period of nearly fifteen years. Assuming, for the purpose of calculation, that the timber on licensed lands would supply the requirements for fifteen years, we have a sufficient quantity of pine in sight to meet the demand for the next thirty years if no steps were taken towards reforestation and without considering reproduction. We must, however, in this thirty years take such steps as will provide a supply of white pine for all time to come.

The announcement by the Commissioner of the establishment of another forest reserve, of no less than three thousand square miles, was naturally very favorably received. The total area of forest land set apart under the Forest Reserve Act is now about 9,000 square miles, certainly a very substantial beginning. This territory is covered by virgin pine, and the Commissioner announced that it is proposed to adopt new regulations governing the disposal of the timber on these reserves. This is in line with the recommendation of the Forestry Commission, which advised that the various types of forest embraced in the Crown domain should be considered with the view of adopting such special treatment in each case as its peculiar features demand in order to realize the best results. Selective cutting is to be adopted, the general proposition being to have cut such timber as is designated by the Crown's timber experts, and also that this timber shall be cut and cared for in such a way as to reduce the risk of fire to a minimum and give the undeveloped timber an opportunity to develop. It is probable that after the trees are selected they will be offered by public auction as is now done with timber areas. The Commissioner points out that these regulations will apply only to forest reserves and that the regulations are entirely different from those under which licenses to cut timber have been sold by public auction in the past.

Another recommendation of the Forestry Commission is to be adopted, viz., the reforestation of areas which have been sold under license but have been abandoned by the licensees and are unsuitable for agricultural purposes. In this connection it should be borne in mind that the 826 square miles disposed of in December last will revert to the Crown after a period of fifteen years and will be availble for any system of reforestry which the government may choose to apply.

QUEBEC COLONIZATION COMMISSION.

The Quebec Colonization Commission, appointed by Order-in-Council for the purpose of investigating the relations existing between the lumber companies and the settlers, have held several sessions recently. The Commission has for its object the settling of disputes and consideration of the best means of protecting the forests from the ravages of fire. The evidence submitted showed that there have been many bogus settlers and that it is with this class of settlers that the lumbermen have had disputes. Mr. Alex. Lumsden said he knew of only one case of dispute with a bona fide settler. The feeling of lumbermen is that squatting should be made prohibitive, and the government officials authorized to carry out the regulations. They think that there should be a more careful inspection of the areas open to colonization and a rigid adherence to the settlers' laws. The Commission have earnestly taken the matter in hand and it is expected that the recommendations which will be made to the government will be of considerable benefit to the lumber industry and result in more harmonious relations between lumbermen and settlers.

ONTARIO'S FOREST RESERVES.

In June, 1897, at the instance of Mr. Thomas Southworth, Director of Forestry for Ontario, a Royal Commission was appointed by the Legislature to investigate and report on the subject of restoring and preserving the growth of white pine and other trees upon lands in the province which are not adapted for agricultural purposes or for settlement. Upon the recommendation of this Commission the Legislature in the spring of 1898 adopted the Forest Reserves Act, empowering the Liutenant-Governor in Council to set apart from time to time such tracts of land as might be deemed advisable for future timber supplies, such reserves to be under the control and management of the Department of Crown Lands. The first reserve created under this Act was established by Order-in-Council in April, 1899, and comprises about 125 square miles in the Counties of Frontenac and Addington. This tract had been lumbered over and is now reproducing a vigorous growth of young pine.

On February 10th, 1900, by an Order-in-Council, an area of about 75 square miles in the Township of Sibley, on the north shore of Lake Superior, was withdrawn from settlement and constituted a forest reserve. This territory had also been largely cut over, but is now growing a new crop of young timber of different varieties, including white pine.

The first important reserve created was the Temagimi reserve, comprising about 2,200 square miles of pine-bearing territory around Lake Temagimi. Unlike the previously constituted reserves, this area had never been under license. It contains an extensive tract of white pine, the quantity standing being estimated above 3,000,000,000 feet board measure. This reserve was set apart on January 11th, 1901, and a few months ago it was extended northward and westward until its total area is now 5,900 square milles.

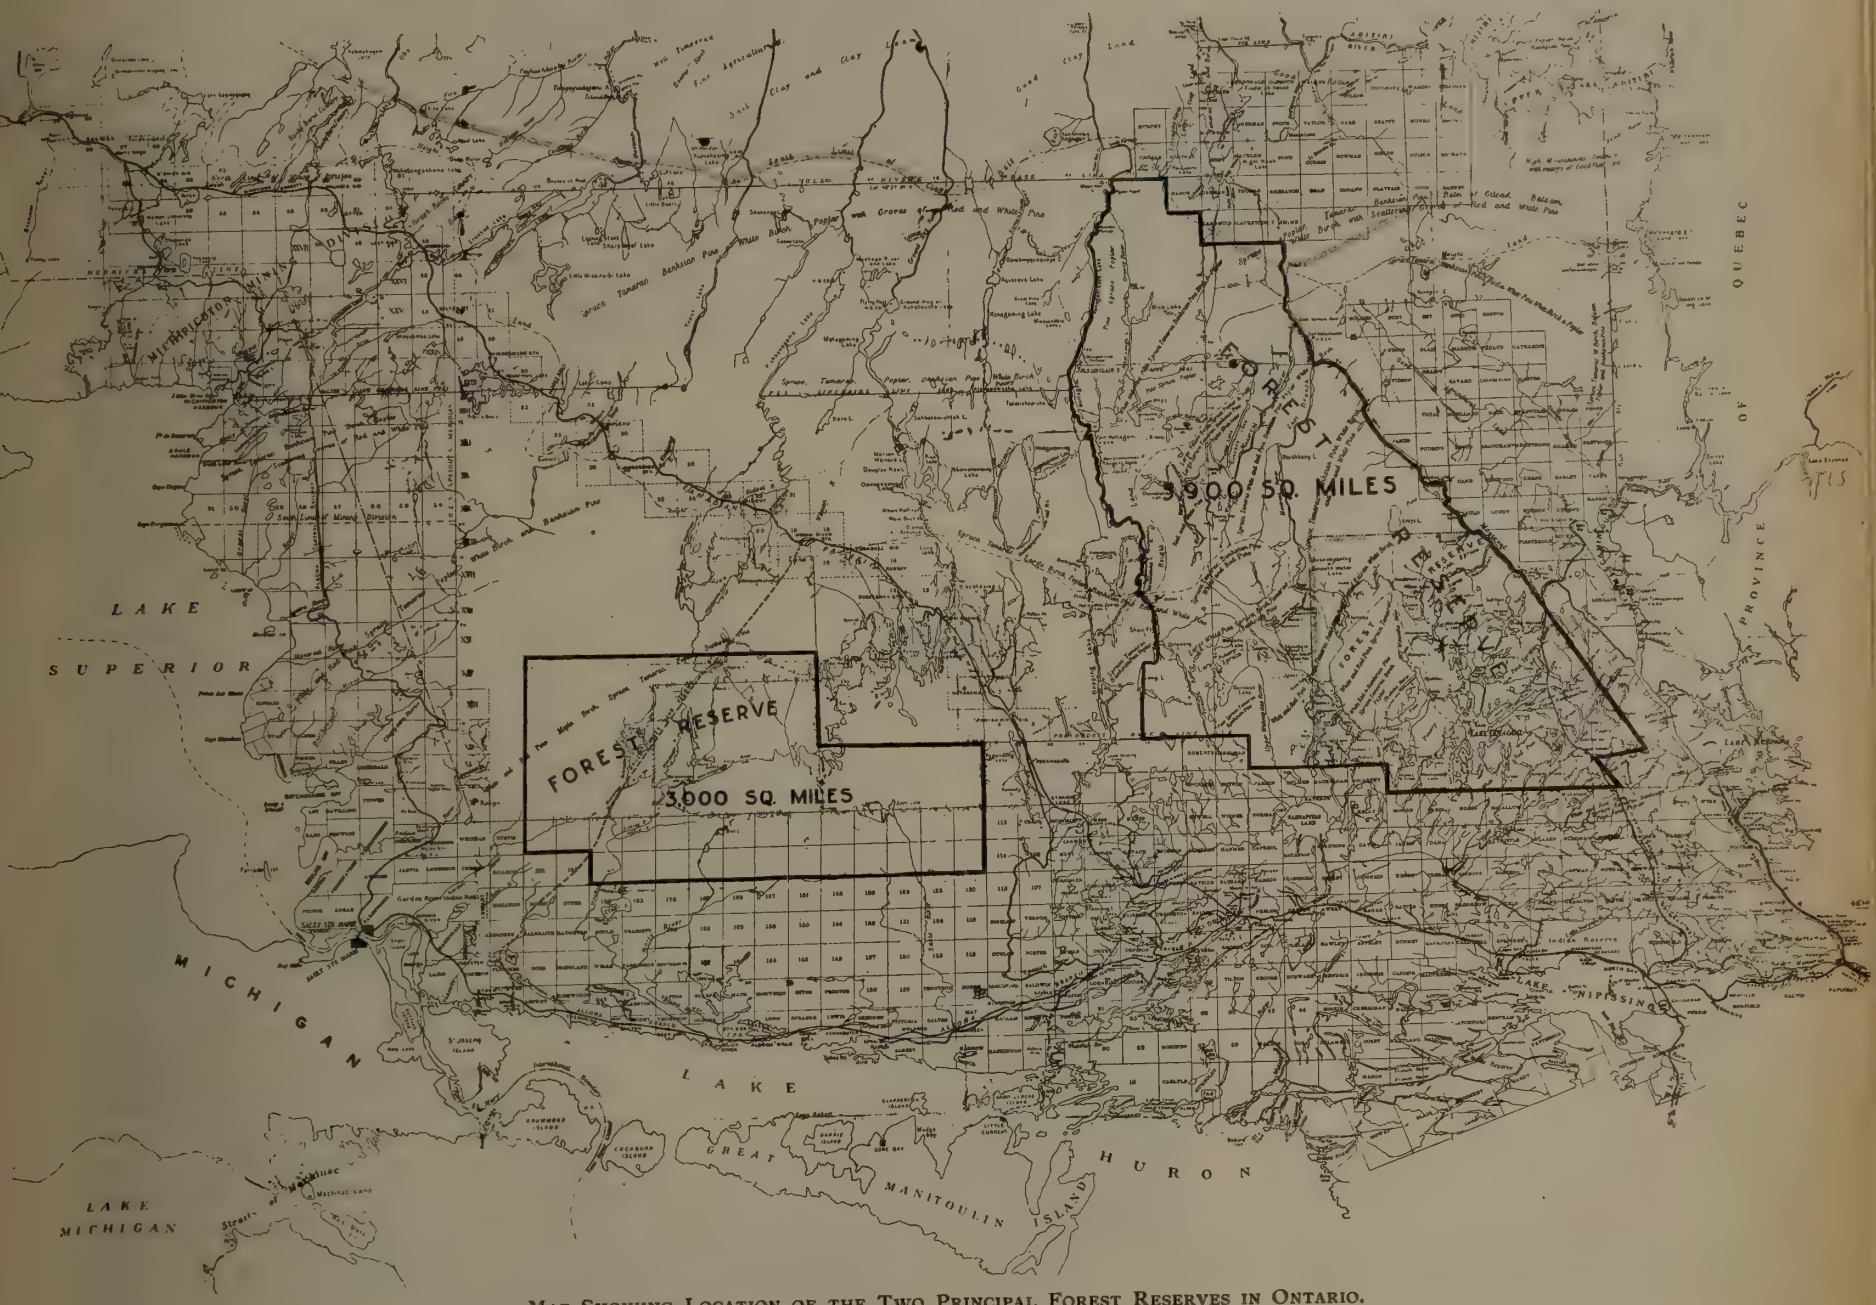
The announcement of the establishment of another large reserve has just been made. It is situated in the Algoma district and embraces 3,000 square miles. As in the case of the Temagimi reserve, none of the territory included in it has been placed under license.

In connection with the management of the two latter reserves, it is the intention of the government to adopt a new policy in respect to the cutting of timber. Instead of granting licenses for the privilege of cutting the timber on a given area, only the trees which are matured will be disposed of, and these will be marked by government experts.

It will be seen that the reserves now set apart on which no licenses to cut timber have yet been granted comprise 8,900 square miles, and the careful husbanding of the immense quantity of timber on this vast territory will do much towards perpetuating the supply of white pine.

In referring to forest reserves mention should also he made of the Algonquin National Park, which includes upwards of 1700 square miles, the greater part of which was withdrawn from settlement and created a park or reserve by a special act of the Legislature in 1893. The territory has all been placed under license, and although the primary objects were the preservation of fur bearing aminals and game, and the protection of the sources of important rivers, nevertheless it forms an extensive forest reserve. The setting apart of the above named reserves, it may he said, is largely the outcome of suggestions made by the present Director of Forestry.

The accompanying map shows the location of the two most important reserves, and gives also a general idea of the character of timber found throughout the greater portion of the province.



MAP SHOWING LOCATION OF THE TWO PRINCIPAL FOREST RESERVES IN ONTARIO.

MUCH PLEASED WITH IT.

Messrs. Steele & Co., Smith's Falls, Ont., write: "Enclosed find postal note to renew our subscription for your journal and we are much pleased with same."

WHOLESALERS OF WHITE PINE.

The efficient conduct of a wholesale lumber yard calls for the exercise of extraordinary business ability as well as a knowledge of the many practical details peculiar to the trade. In the yard of the Herman H. Hettler Lumber Company, Chicago, we have an example of an up-to-date plant under able management.

Before referring to the yard equipment, something regarding the personnel of the company is in order. The business was established in 1887, when Mr. Edwin S. Hartwell entered into partnership with Mr. Herman H. Hettler. The business was conducted under Mr. Hartwell's name until 1896, when the Edwin S. Hartwell Lumber Company was incorporated, Mr. Hartwell becoming president and Mr. Hettler vice-president and general manager.

Upon the retirement of Mr. Hartwell, about one year ago, the firm name was changed to the Herman H. Hettler Lumber Company, the officers of which are: President, Herman H. Hettler; vice-president, John Lewis Phillips; secretary, Edward L. Casey. The duties of Mr. Phillips, the vice-president, are particularly those of looking after their extensive yellow pine business in the South. Their Southern office is at Tifton, Georgia, in charge of Mr. J. S. Gordon. The company is in position to furnish promptly long or short leaf yellow pine, and with an up-to-date system of tracing shipments are enabled to insure to their customers prompt deliveries. Particular attention is paid to railroad requirements, such as car sills, bridge stringers, etc., and also to large and heavy timbers required for buildings and all other purposes. They are in position also to quote on finishing lumber, flooring, etc. Mr. Edward L. Casey performs all duties pertaining to the position of secretary.

The company is each year giving greater attention to Canada as a source of lumber supply, their Canadian office being located at Midland, Ont. Mr. Joseph H. O'Neill, who formerly had charge of their purchases in Chicago, is manager of the Canadian Department, with Mr. Chas. R. Shaw as resident agent at Midland. They purchase entire mill cuts and also logs, which it is customary for them to have sawed at Midland and Parry Sound, at both of which points they carry large stocks of lumber. While a portion of the lumber so manufactured in Canada is taken to their distributing yard in Chicago, particular attention is paid by the Midland office to making sales for the export trade as well as to the wholesale and retail yards in Canada.

The design of the plant of the Herman H. Hettler Lumber Company at Chicago is shown by the bird's eye view herewith. The yard fronts west on Elston avenue and reaches through to the river. This lumber yard plant is considered the most complete plant of its kind in the United States. The office, planing mill, saw mill and lumber sheds are all new and have been constructed upon the most modern lines. The same remarks apply particularly to the power plant and the machinery used in the various mills. The yard contains about twenty acres of ground, solid and level, except that there is a slope of about five feet from the street to the river. In addition to the dock front proper on the river, a slip has been cut into the center of the yard, thus there is room to accommodate a dozen or more vessels of the largest size at the same time. Large stocks are carried at all times of white pine, Norway, red pine, hemlock, etc., and with their planing mill and saw mill facilities, they are enabled to furnish lumber promptly, both rough and dressed in almost any manner. A special feature, however, is that of oak and maple flooring, of which they are large manufacturers. Their product is what is known as the "Modern Brand," and is guaranteed to be equal if not superior to any other flooring manufactured. This stock is bored, butted and end-matched, kiln dried, polished, and as near perfection, we believe, as could be had in hardwood flooring. The saw mill is equipped entirely with electrical motors.

YARD AND PLANT OF THE HERMAN H. HETTLER LUMBER COMPANY, CHICAGO.—PARTIAL VIEW.

The annual turn-over of the Herman H. Hettler Lumber Company amounts to from eighty to one hundred million feet. The quantity carried in stock varies from thirty-five to fifty million feet of white pine, in addition to a large supply of Norway bill stuff, hemlock, yellow pine, cypress and hardwoods.

AUSTRALIAN HARDWOODS.

The initial shipment of hardwoods imported from Australia by the Canadian Pacific Railway Company arrived in Vancouver early in February. They are to be given a thorough test for the interior decoration of passenger coaches. It is said that they are capable of taking on a high polish and that they are unsurpassed in quality as finishing woods for decorative purposes. The Australian red bean, for instance, compares favorably with mahogany in appearance but is much less expensive. A warehouse in which to store the hardwoods is now being erected on False Creek.

SECTION OF CENTRAL LOADING TRACKS—HERMAN H. HETTLER LUMBER COMPANY.

PROPOSED REMEDY FOR CAR SHORTAGE.

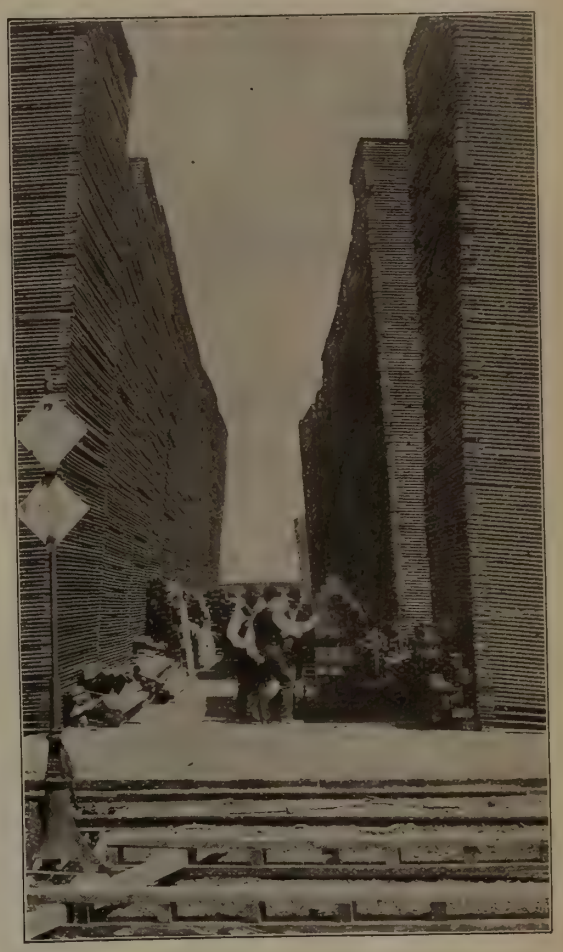
It is unnecessary to enlarge upon the losses constantly sustained not only by the lumber trade but by commercial interests all over the country because of the inadequate supply of cars and by the insufficient service o the railroads in moving them to destination. In the United States it is proposed to call upon Congress to remedy this dfficulty, the following being the chief provisions of the bill designed for that purpose?

Extra Storage Tracks—Herman H. Hettler Lumber Company.

Be it Enacted by the Senate and House of Representatives of the United States of America, in Congress Assembled :

Section 1. It shall be the duty of every railroad company engaged in carrying, or in giving bills of lading for carrying, personal property and live stock, between points in different states or territories, or over such railroad and any connecting line or lines of railroad, to any point in another state or territory, to receive and commence the carrying thereof within five days after the offer of delivery thereof for such carriage, and any failure to receive or commence the carriage of such property shall entitle the person making such application to recover from such company, for each car necessary for such carriage, for each day after said five days during which such failure shall continue, a penalty of ten dollars.

Section 2. It shall be the duty of every railroad company to transport and haul all cars furnished to any shipper for such carriage over its line of railroad from the starting point to the point of destination thereon of such shipment, in such number of days of twenty-four hours each as will equal the number resulting from the division by the number fifty, of the total number of miles of carriage of said shipment, and for each additional day said company shall forfeit and pay to the consignee of such shipper for each car the sum and penalty of ten dollars to be recovered by him in the manner provided in the first section of this act.



A Solid Alley—Herman H. Hettler Lumber Company.

Section 5. The penalties recoverable under this act may be sued for in one single count or statement in the petition or complaint, without having a separate count for the penalty for each car for each day for which such penalty is given by this act.

The Southwestern Lumbermen's Association is behind the movement.

Yard from Across the Basin—Herman H. Hettler Lumber Company.

LUMBER INSURANCE AT REDUCED COST

Pennsylvania Lumbermen's Mutual Fire Insurance Co.

632 Dexel Building - - PHILADELPHIA, PENNA.

RESAWING BASSWOOD.

In regard to resawing 1¼ inch basswood so as to produce three ⅜ boards dressed one side, a writer in The Wood-Worker says: That is a pretty fine job, and would require a hand saw of about 21-gage, with set to cut 1/32. If the 1¼ stock were dressed before resawing, the job would be easy enough, but if the stock be rough and only 1¼, then some fine work has to be done. Set the feed rolls enough to one side so the saw will cut off a board ⅜ and 1/64 full; then cut the next exactly in the center, and there will be three boards with 1/64 to dress off fairly well. I should say that about 25 feet per minute would be fast enough to feed 13-inch stock, though a faster feed might do all right. I should try a piece of 1¼ stock, any width, so as to be sure the machine is properly adjusted, before beginning on the 13-inch stock. I should judge a 4 or 5-inch blade would stand up to such work, though, of course, the wider the better. Such a blade, with 19-gage, will stand 50 feet per minute in dry pine.

LUMBER UNDERWRITERS PAID FIRST.

Much interest has been aroused among the policy-holders of the various lumber insurance organizations as to the possible effect of the disastrous White, Rider & Frost fire at North Tonawanda, N. Y., which occurred on January 27th. Nearly $400,000 worth of white pine lumber was destroyed and nearly one hundred insurance companies were interested in the risk. The Lumber Underwriters, of 66 Broadway, New York, had the honor to be the first company to settle their portion of the loss, as is indicated in the following letter from White, Rider & Frost, addressed to that company:

NORTH TONAWANDA, N.Y., Feb. 6th, 1904.

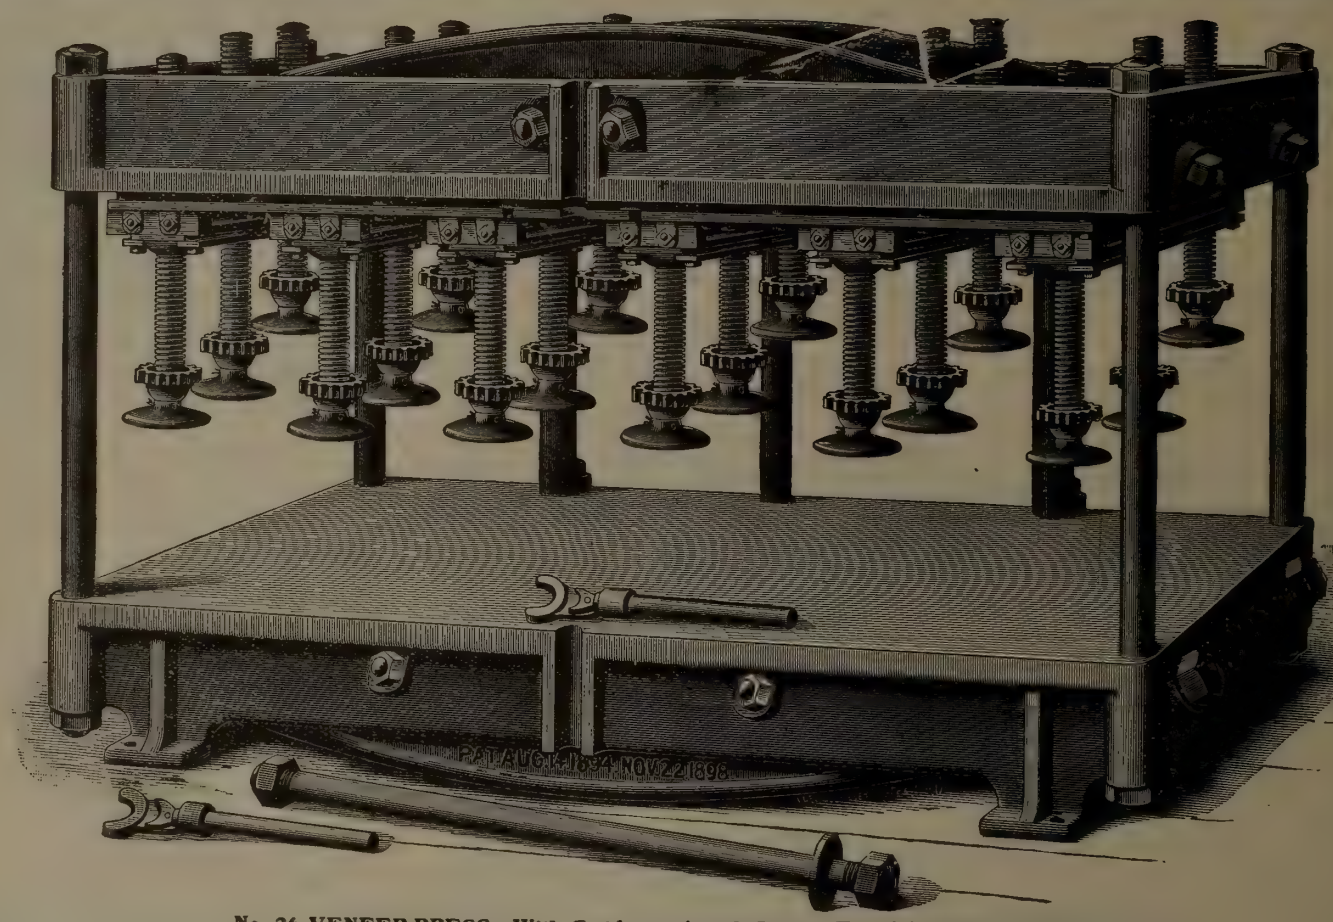
Lumber Uuderwriters at Mutual Lloyds,
New York City.

GENTLEMEN, — We wish to advise you that we appreciate fully your prompt settlement on our recent fire loss and that your drafts in payment were the first received and we shall be glad to do further business with you as soon as we begin to receive stock on the opening of navigation for the season of 1904.

Yours very truly,
WHITE, RIDER & FROST,
By (Signed) H. L. White.

If you are using glue to any extent it will pay you well to thoroughly investigate the subject of

MODERN GLUE-ROOM APPLIANCES



No. 26 VENEER PRESS.—With Guides and with Screws Fitted for Ratchet Wrenches.

This engraving represents our improved large complete Veneer Press, which is the most convenient and best paying press of this kind ever introduced.

In it are combined all the features of advantage, insuring perfect work and convenience in operation. The principal points of advantage are: A solid and perfectly true plate to clamp the stock against. **Screws adjustable in both directions** in the press. **Ratchet Wrenches** to apply the pressure at lower end of screws. **Guides** to keep the stock in line while being pressed. **Open side,** allowing stock to be placed in position from the front. Most of these points are only found in this style Press.

The **top** and **Base are extra heavy** and are strongly ribbed and braced, and are strengthened by large steel truss-rods drawn tightly over their arches.

The **Cross-sections** are also strengthened by steel draw-rods.

The **Screws** are made of 2-inch steel, 24 inches long, and have square threads.

The **Nuts** in which the screws work are made of the **best and toughest malleable iron,** are tapped out, have a **long thread-bearing,** and are adjustable in the cross-sections which slide in planed ways, lengthwise of the press. By this arrangement the screws can be placed closely together or in almost any position to suit the operator.

The Press is 8 feet 6 inches extreme length or 8 feet 1 inch long between end uprights, is 36 inches extreme width of base, and 30 inches wide between uprights; has six (6) Cross-Sections with three Screws each (18 screws). The **weight** is about 6,000 pounds.

The Press as shown is 37 inches between base and top, and will take in 25½ inches between the bottom of flanges on screws and top of base. This distance can be increased or diminished to suit the purchaser.

The number of Cross-sections and also the number of Screws in each Section can be altered to suit the purchaser.

Our special Glue-Room Catalogue No. 1197 shows Veneer Presses of various sizes and styles, Hand and Power Glue Spreading Machines, Trestle Clamps, Double Clamps, etc., etc. We send this upon request to all interested parties. Be sure to mention the number, 1197.

IMPERIAL BUILDING MONTREAL.

22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED

16 in. and 18 in. Pine Shingles, in XXXX; C. B's and XX. State when cut, and quantities on hand.

HURDMAN & ELMITT, Ottawa, Ont.

FOR SALE

FACTORY FLOORING

KILN DRIED BIRCH, ABOUT 60 M. Box 442 CANADA LUMBERMAN.

A CANADIAN GENTLEMAN HAVING considerable experience in British methods and centres, who intends sailing for Liverpool about 1st May, would be pleased to represent a few Canadian firms in lumbering, manufacturing or any mercantile or confidential capacity, in the chief cities of Great Britain; all correspondence strictly confidential. Address W. E. LOUNT, Markham, Ont.

THE S. G. READ AGENCY, BRANTFORD.

360,000 acres of Mexican Lands—heavily timbered; for sale in one block, only 50 cents per acre. S. G. Read & Son, Brantford.

500 square miles Timber Lands—in Province of Quebec: for sale, S. G. Read & Son.

Several hundred square miles in North Ontario. S. G. Read & Son.

Saw milling business for sale — first-class. S. G. Read & Son.

FOR SALE—SAW-MILL REFUSE BURNER 14x45 feet, also heavy slush chain, sprocket and gear. Address Box 285, Orillia.

BAND SAW FILER WISHES ENGAGEMENT; experienced in double cuts. Box No. 122, CANADA LUMBERMAN.

WANTED—CAR LOAD 2" GOOD, SOUND, basswood lumber, mill run, culls out; State price F.O.B. R. WOON & Co., Oshawa, Ont,

FOR SALE—TWELVE HUNDRED ACRES heavily timbered land, convenient to two railways, or will let contract to log and saw same to party with good mill. Box 123, CANADA LUMBERMAN.

WANTED—10 CAR LOADS OF COMMON and Better White Winter Cut Basswood, cut 1⅛" from the saw or good plump 1" when dry; will take it 3" wide and up, 3 ft. long and up; can ship in car lots from any part of Ontario or Quebec. Address Box 84, CANADA LUMBERMAN.

FOR SALE

About 2 cars White Oak Plank 2", 3" and 4" thick, from 6" to 12" wide and 6' up to 16' and over long, mill run; also some Red Oak. BENJAMIN SHERK & SON, Sherkston, Ont.

CIRCULAR SAW HAMMERING

taught right in your mill by mail. No previous experience necessary. Sent prepaid on trial. Send for Canada references, who are cutting frozen timber with my gauge and instructions. J. H. MINER, Lumberton, Miss.

Lumber Wanted

WANTED, FROM ONE TO TEN CARS OF firsts and seconds, 4/4, 5/5 and 6/4 Black Ash, for our wholesale trade and immediate shipment. GOLD MEDAL FURNITURE MFG. CO., Ltd., Van Horne street, Toronto.

TIMBER LIMIT FOR SALE

BERTH NO. 3 SITUATED ON THE SOUTH-WEST corner of the township of Creelman, comprising lots number 7, 8, 9, 10, 11 and 12 in the first, second and third concessions; good location, Vermillion river running through centre. For terms and particulars apply to W. RYAN, North Bay.

FOR SALE

NOVA SCOTIAN LIVE GANG, 26" STROKE, 33" between uprights. Apply to A. M. WOOD, Central Wharf, Halifax, N S.

BUSINESS CHANCES

FOR SALE—THE FACTORY PROPERTY and Plant of the Lake of Bays Wood Manufacturing Co., including a quantity of Hardwood and Hemlock Logs, Lumber and Flooring; Saw-Milling Plant complete and Machines for the manufacture of Broom Handles and all kinds of Turned Goods Etc. All in complete running order Situated on Lake of Bays, Muskoka, adjacent to Huntsville. Apply to J. W. WHITE, Huntsville.

MACHINERY FOR SALE

One Improved Mortiser, 1 Mortiser and Borer, 1 Cowan Matcher, with Shimer Heads, 1 twenty-four-inch Surface Planer, 1 Band Saw, 1 Turning Lathe 1 Shaper, 1 Jig Saw Machine, 1 Tenon Machine for Blinds, 1 Blind Staple Driver, 2 Splitting Saw Tables, one Sander for doors, etc., price $50.00. A. H. CUMMINGS & SON, Coaticook, Que.

FOR SALE—PINE AND CEDAR SHINGLES 16 and 18 inch. T. J. HARWOOD, Mattawa, Ont.

WANTED—A FIRST-CLASS HARDWOOD Lumber Buyer and Inspector; one who has had experience in shipping from Ontario mills preferred. THE WILSON LUMBER CO., Toronto.

WANTED—POSITION AS BAND SAWYER, either single or double cut. Write stating wages and requirements, Box 121, CANADA LUMBERMAN.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

WANTED — FOREMAN, MODERN BAND saw mill in live town on Georgian Bay. State age, experience and salary. Address Box 118, care CANADA LUMERMAN.

WANTED—1" CULL SPRUCE; HARDWOOD lumber of all kinds and thicknesses; Staves, Hoops and Heading; Cedar Posts. R.E. KINSMAN, Hamilton, Ont.

WANTED—ABOUT ONE MILLION FEET of Hemlock logs, assorted lengths, on shore or in booms Georgian Bay. Quote price and particulars to Box 163, Midland, Ont.

WANTED—100 M. FT. 4/4 COMMON AND better Birch, 50 M. ft. 5/4 common and better Birch for immediate shipment. R. E. BECKER Co., Poplar and McLean Avenue, Cincinnati, Ohio.

Edger For Sale

THREE SAW EDGER IN GOOD REPAIR, for sale cheap. Enquire The HURON LUMBER Co., Spanish River, Ont.

FOR SALE

Large Tract of Timber

In Central Ontario

THE PROPERTY OF

THE CANADIAN LAND AND IMMIGRATION CO., OF HALIBURTON, (LIMITED).

This company has a large tract of well timbered land about 125 miles northeast of Toronto. There are large quantities of Cedar, Hemlock, Spruce, Balsam, Basswood, Cherry, Birch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads. The company are prepared to sell this timber in blocks ranging from 2,000 to 10,000 acres, or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and looking for a new location.

Maps and plans and further particulars can be had by applying to

W. H. LOCKHART GORDON,
Managing Director,
157 Bay Street, Toronto.

CURRENT TRADE CONDITIONS.

ONTARIO.

The month of March is not usually a busy time for the lumber trade, and the present month promises to be no exception. The difficulty in making shipments has caused consumers to refrain from placing orders, and there is little promise of any improvement in that respect during the present month, as much freight is now standing on railway sidings waiting to be moved at first opportunity. Nevertheless, there has been during the past week an increased number of inquiries for lumber for spring delivery and the outlook for business is regarded as favorable. As spring approaches buyers show a greater disposition to anticipate their requirements, while manufacturers are also acquiring more confidence. Later on it will likely be found comparatively easy to effect sales. There is some business doing in the cities, but country trade is still backward. A comparison of price lists recently issued with those of one month ago show very little change. For inch box and common, 10 to 12 inches wide, from $18 to $19 is asked at the mills. The average price of pine mill culls is about $11. The tone of the hardwood market is very firm, influenced by the expected shortage in the production of logs. Some manufacturers are asking $19 for mill run birch, which is probably the strongest of all hardwood stock at the present time. Elm and maple are also regarded as splendid property. Shingles and lath are experiencing a period of quietude and there is not sufficient demand to cause prices to fluctuate. XXXX cedar shingles have been sold recently at $2.60 at the mill.

QUEBEC AND NEW BRUNSWICK.

Eastern manufacturers report an increase in the number of inquiries for spruce lumber for shipment to New York and the New England States, but otherwise the situation is unchanged. The outlook at the present time is uncertain, and it is probable that the quantity of stock shipped to Great Britain will this year show a falling off. So far the buying has been very light. Manufacturers are making a strong effort to maintain prices and are watching the course of events in Europe with more than usual interest. Work in the woods is drawing to a close. Some operators were compelled to suspend operations earlier than usual owing to recent rains.

For the best brands of cedar shingles $3.40 is being paid for Boston delivery. There is not much snap to the demand, however, while offerings are fairly large.

MANITOBA AND BRITISH COLUMBIA.

During the months of January and February the Building Inspector of Winnipeg issued permits for buildings valued at $145,300, as against $42,150 for the corresponding two months of last year. There is every indication that building operations in Winnipeg this year will be in excess of 1903, when over $5,000,000 was spent. There promises to be considerable activity also in the smaller municipalities in Manitoba and the Territories, and a brisk demand for lumber is anticipated in the spring. Dealers have as yet bought very sparingly, as the negotiations looking to a reduction in the price of lumber has caused them to withhold all orders. The lumber trade of British Columbia is rather unsettled. The sawing capacity is now so great that if the outlook should appear at all promising there would likely be a very large production. This fact is being recognized by the older manufacturers, who are pursuing a conservative course and will likely curtail their production.

UNITED STATES.

The lumber business of the United States is rather spotty ; some sections report nothing doing, others that the demand has improved perceptibly. Throughout the Southwestern States spring conditions have prevailed and there has been a revival of the demand for lumber. In the northern pine territory the season has been backward and the movement of lumber so far this spring very light. Some improvement in the demand is reported, and it would only require a week or two of favorable weather to start building operations and induce a pronounced revival in the demand. Dealers at Buffalo and Tonawanda have a fair stock of lumber on hand, and it is only fair to say that there is not exhibited as much eagerness to make contracts as was noted a year ago. Eastern spruce is in an exceptionally strong position. Stocks are scarce and the demand is more than equal to the absorption of the ready supply. Frames are quoted in Boston at $19 to $21 a thousand.

During the past fortnight there has been an advance in hemlock in New York ; 2x4 in 18 and 20 foot has been advanced 50 cents, making the price on this item now $2 above the $17 base, as against $1.50 the year before. Hardwood stock for future delivery is in good inquiry. Plain and quartered oak is moving in the greatest volume and prices are very firm.

GREAT BRITAIN.

Reports from Great Britain regarding the condition of the lumber trade are a little more encouraging in character. The consumption is behind that of last year and agents of shippers have not been altogether successful in closing contracts, yet the feeling as to the future is more hopeful. The weather is now more favorable for building operations and this is expected to help the situation materially. Much has been made of the fact that the quantity of Canadian lumber contracted for has been smaller than one year ago, but upon close investigation it has been found that considerable business has been booked in the better qualities of pine and spruce and that prices in most instances have been slightly better than those obtained for the 1903 production. Third and fourth quality pine has been difficult to place, but the better grades are still regarded favorably even at the high prices which are now asked. In spruce some business has also been done, the highest price realized, so far as can be learned, being £9 per standard of 1980 feet c i.f. for good thirds from Quebec.

In the "spot" market there has been a distinct improvement. At the last auction sale held by Messrs. Churchill & Sim in London 3x11 first quality pine, 14 to 16 feet, brought £32 10s per standard. First quality red pine brought £16 10s. For third quality spruce £9 5s. was realized. A report from London states that agents are gradually clearing out their second quality 3x9 in. spruce deals at £10 10s, thirds at £9 15s, and fourths at £8 15s, whilst the importers have been busy selling their stocks at prices slightly in advance of the foregoing figures.

STOCKS AND PRICES.

The City of London, Ont., is asking for tenders up to 17th inst. for supply of lumber.

The Red Deer Lumber Company, of Red Deer, N. W. T., expect to cut about 35,000,000 feet of lumber this season.

Tenders are invited up to March 15th for supply of cedar and plank required by the Board of Works of the city of Ottawa.

The Crow's Nest Pass Lumber Company, of Wardner, B. C., expect to cut about 25,000,000 feet of lumber this year.

W. D. Baillairge, Assistant City Engineer of Quebec, will receive tenders up to March 23rd for annual supply of deals, etc.

Dexter Conner, of Welsford, N. B., has taken out 3,000,000 feet of logs this winter, which will be sawn by rotary mills.

C. Jackson, of Paradise, N. S., is operating in the woods for Pickles & Mills, of Annapolis. He has four camps, which are getting out 80,000 feet of logs per day.

H. Elderkin & Co., of Port Greville, N. S., expect to cut and ship this season about 1,000,000 feet of spruce and hardwood and 20,000 pieces of spruce piling, spars and poles.

The Corporation of the City of Kingston desires tenders by noon of March 10th for supply of 150,000 feet of 3, 2, and 1½ inch pine plank and 30,000 lineal feet of 5x4 inch cedar sleepers.

W. Margach, Crown Timber Agent, Rat Portage, Ont., states that the production of logs in the Lake of the Woods district the past winter has been larger than the previous season. There will be about 100,000,000 feet for the Rat Portage and Keewatin mills and 90,000,000 feet for the Rainy River mills.

Despite the tremendous cut during past years, lumber operations around Williamsport, Pa., writes a correspondent of the CANADA LUMBERMAN, are still of considerable importance. In 1902 the total shipments from this district amounted to 162,990,000 feet of lumber in the rough, while in 1903 they were estimated at 149,094,000 feet, showing a decrease of 13,896,000 feet on the record of 1902.

The feature of the hardwood trade in general, says the American Lumberman, is the light supply of dry stocks and of common and culls of all woods. The consumption has been large, and as they have been used to a greater extent owing to the high prices for the better grades they have been used up closer than ever. This has never happened before and is a situation that makes the largest users stop and think as to what they will do for further supplies. The greatest scarcity is noticeable in plain oak of all kinds, and the firmness with which it is held. Buyers who have been after dry stock of all woods find it difficult to get in suitable lots. This applies to all woods and makes holders firm in their views of prices.

BROOM HANDLES.

If an enterprising man with supplies of cheap Spruce, Basswood or Poplar care to put in several machines to work broom handles we can take his output. Write in first instance to Empire, care of CANADA LUMBERMAN.

The assets of F. X. LaFramboise & Company, wood and lumber, South Indian, Ont., are to be sold on the 11th inst.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

As has been hinted from time to time in these columns, the present year is not likely to witness any decline in the price of manufactured white pine sent out of the Ottawa district mills. An authority on the subject said to-day that very little white pine of the 1904 mill cut still remained in first hands. Practically all of it is in second hands and at a ten per cent. advance at that. Nor is the advance in the market confined to pine. Spruce, another fair factor in Ottawa district lumber circles, has also advanced so far as the 1904 cut is concerned.

The first mill man to announce the ten per cent. advance was Mr. J. R. Booth, "the king of them all." What J. R. Booth says generally goes in lumber circles in Eastern Canada, and consequently other mill owners followed suit, so that practically all the 1904 cut was sold at the advance. The reasons given for the advance are the increased cost of labor and provisions for the present season.

"Yes, there's been an advance," said a buyer, "but I cannot see how the second man can realize on it. Certainly the demand for Canadian lumber just at present does not warrant such an advance."

It is generally agreed that when the advance was decided upon, the mill men had in mind the fact that there would be a shortage in the log cut and hence less manufactured lumber later on to supply the market.

Despite the shortage in the present season's log cut, it is thought that the saws will have about all they can do next summer. In the first place there was a good run of logs last year, and many are still in the booms, which will be available when the mills start in on the season's cutting. Then again, all the present season's cut will be driven if the snow and water does not move off too rapidly, and this will mean a good supply for the summer sawing proper.

The firms anticipating an early break-up paid attention to the movement of the logs and have, despite the handicap of deep snow, placed them nearly all on the stream sides. Where the depth of snow is no interference, some of the firms have resumed log cutting operations near the streams and this will mean an additional supply. Again, in Quebec province, many logs were "hung up" last year which will, from present indications, be gotten down to the mills this spring. All this will go to give the saws a good supply and to insure a normal cut of lumber.

It is recognized that in the matter of log shortage, the Ottawa district is better off than is the Georgian Bay country, where the deep snow and lack of labor were more general impediments.

The square timber men are pretty confident that they will get all their bulky sticks cut this spring, but even at that the showing will not be as good as was that of last year as far as the Ottawa operators are concerned. As a matter of fact, square timber is already moving by rail. The Canada Atlantic is hauling some of the finest square timber cut in the Ottawa country off Mr. J. R. Booth's Madawaska limits. The timber is being unloaded into the St. Lawrence at Clark's Island. There it will be made into a raft and floated down to Quebec city for export when navigation opens.

In the retail end of the business there is little doing, snow blockades continuing to give trouble in the handling of lumber in the yards and on the railways. As has already been intimated, good business is expected with the opening of spring. It is believed the resumption of building operations on an extensive scale in New York and district, will create a big demand for Canadian white pine. Moreover, the Baltimore fire will also indirectly benefit the Ottawa lumber business. There will be a big demand in the fire-swept city for southern woods, and this will mean a falling off in their shipments to the New York market. Shortage in Georgia pine and southern cypress in the New York and other northern markets will mean an increased demand for Canadian white pine.

An important deal in the 1904 cut of spruce has just been closed. Mr. W. H. McAuliffe, of Ottawa, has contracted for the summer's cut of spruce at McLachlan Bros.' mill, Arnprior, and the St. Anthony Lumber Company's mill at Whitney. The combined cut will reach between four and five million feet. Mr. McAuliffe secured the same stock last year.

OTTAWA, March 5th, 1904.

DEMAND FOR RAILWAY TIES.

Mr. A. Poindron, Commercial Agent for Canada at Paris, France, has submitted to the Department of Trade and Commerce a report on the demand for railway ties in France. The dimensions of the ties mostly in demand are similar to those used in this country. There are two sizes, the first 8 ft. 10 3-8 inches long by 8 5-8 inches wide by 5 1-2 inches deep for square ties, and second 8 ft. 10 3-8 inches long by 11 7-8 inches by 6 inches for half round or sided ties. The duty is about 29 cents per 220 pounds and the price on the cars at Havre's Station, duty paid, 67 cents each.

The largest steady demand is for oak and beech ties, which are purchased by the railway companies either plain or injected with creosote. When bought plain they are injected with creosote on the railways' own plants. Steady contract specifications have been supplied to Canadian inquirers applying to both cases. No substantial import contract is obtainable from a French railway company unless an important building of track is in course of construction or in view, as for the renewals of the track repairs and small extensions they get generally all the beech or oak ties they want in the local districts surrounding the system's lines, but as soon as important buildings of new tracks are resumed, the local supply becomes insufficient and accordingly they are open for very large contracts of foreign ties. Such has been the case in the past few years.

The railway men in France object to plain beech ties being imported, as they think that the sea voyage injures the wood. Accordingly, so far as beech ties are concerned, French railway engineers would be open only for beech ties shipped from Canada already injected with creosote.

Robert Paul, Newburgh, Ont., is offering his sash and door factory for sale.

The Porto Rico Lumber Company have sold their retail business at Nelson, B. C., to A. G. Lambert & Company.

Head Office, Vancouver, B.C.

SPECIALTIES

Red Cedar Bevel Siding, Plain and Fancy Butts in 16 in. and 18 in. Dimension Shingles, also the famous XXX and XXXX Brands, all Choice Stock.

We own and operate several mills in Washington and British Columbia, being on both sides of the "Imaginary Line" known as the International Line, and it keeps our opponents in the trade guessing how to meet us on account of the good quality of our manufactured stock, which has been so carefully planned that even the selection of our timber lands in years past has something to do with the present.

We find our competing salesmen's story to the customers has now got to be a "song pure and simple," which they have learned from necessity to sing loudly and lustily, and is as follows : **"JUST AS GOOD AS HASTINGS," "JUST AS GOOD AS HASTINGS."**

While we appreciate their holding our goods as models of perfection, which the high standard certainly merits, still looking at the matter from the customer's and the consumer's standpoint we cannot see any advantage to you in buying an imitation when the real article can be had through our representatives, viz :—

James Twitchell, Clinton, Ont., for Ontario, Canada
Samuel Ashfield, Winnipeg, Man., for Manitoba and the North-West Territories
Smith, Duplain & Crumb Co., Rockford, Ill., for Illinois, Indiana, Ohio and Wisconsin
D. D. Babbitt, Clinton, Iowa, for Minnesota and Iowa, North of the C. & N.W. Ry.
John A. Uhler, Burlington, Iowa, for Iowa, South of the C. & N.W. Ry.
C. S. Riley & Co., Philadelphia, Pa., for Pennsylvania
F. R. Stevens, 18 Broadway, New York City, for New York and New Jersey
United Lumber Co., Springfield, Mass., for Maine, New Hampshire, Vermont, Massachusetts, R.I. and Connecticut
Shepard, Farmer & Co., Boston, Mass., for Maine, New Hampshire, Vermont, Massachusetts and R.I.

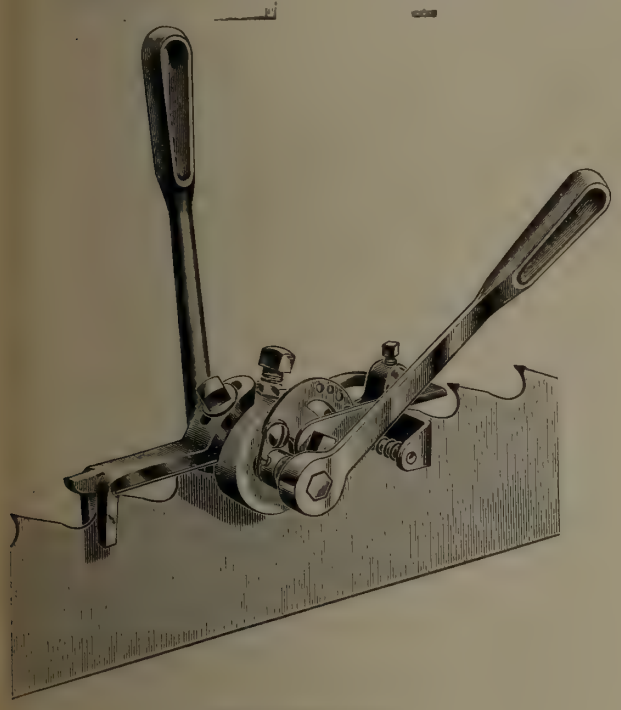
CROWELL PATENT SAW SWAGE.

The Crowell patent saw swages for band, circular and cylinder saws are this month for the first time introduced to the readers of the CANADA LUMBERMAN. The swages, however, are not new in Canada, as they are in use in many of the leading saw mills, where they are giving good satisfaction.



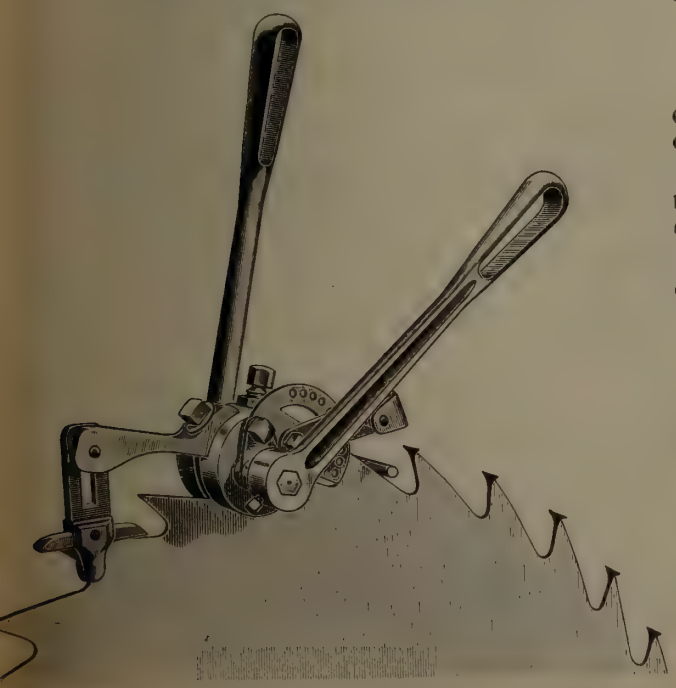
BAND SAW SWAGE.

The Crowell swages are easily adjusted and simple to manage; the manufacturers claim that they spread and swage the teeth with the least waste of any swage on the market. They work equally well on circular or band saws and do perfect work without front guard or back stop, although these are convenient and always supplied. In their manufacture the finest material obtainable is used, efficiency, reliability and durability being features to which special attention is given.

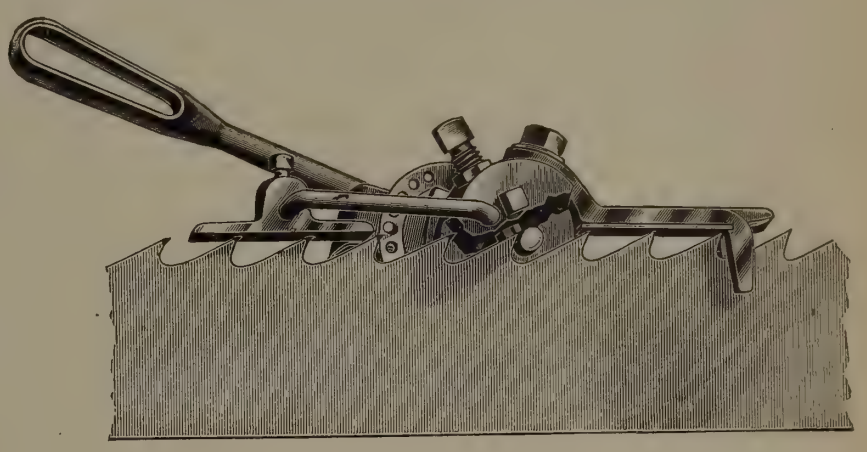
The first illustration shows the band saw swage, the second the circular saw swage, and the third the position of tooth in swage It is unnecessary to buy two swages unless some o the saws are very thick and some are very thin—simply order one swage, with two front guards. The fourth illustration shows their swage for cylinder or stave saws, which has achieved remarkable success.

The Crowell swage is manufactured in four standard sizes : No. 1 is suitable for all saws from 16 to 22 guage, and will fit teeth one inch or further apart ; No. 2 is suitable for all saws from 12 to 16 guage, and will fit teeth one and a quarter inches or further apart ; No. 3 is suitable for all saws from 9 to 12 guage, and will fit teeth one and one quarter inches or further apart ; No. 4 is suitable for all saws from 6 to 12 guage.

The manufacturer of the Crowell swages is Mr. D. J. Crowell, 200 The Terrace, Buffalo, N. Y., who will be very glad to send further particulars and quote prices to all persons interested. He requests that all orders from parties not accustomed to the use of swages should be accompanied by sketch of at least four teeth for band or gang saws, and three teeth for circular saws, also guage of saw.



CIRCULAR SAW SWAGE.



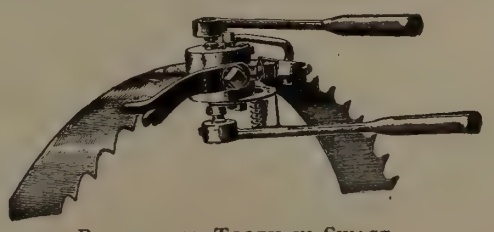
CYLINDER OR STAVE SAW SWAGE.

PERSONAL.

Mr. J. M. Green, senior member of the firm of J. M. Green & Sons, Limited, lumber dealers, St. Thomas, Ont., died last month.

Mr. George H. Perley, lumberman, of Ottawa, has been chosen as Conservative candidate to represent the County of Argenteuil, Que., in the Dominion election.

Mr. Morris Shaver, of South Indian, who had been engaged in the saw-milling business, is announced as an Indepentent-Liberal candidate for Parliamentary honors in Russell County.



POSITION OF TOOTH IN SWAGE.

Mr. B. S. Hallman has been engaged as foreman of the planing mill department of John Piggott & Sons, Chatham, Ont. Mr. Hallman has been connected with the woodworking business for fourteen years.

A pretty house wedding took place at Calumet, Que., on February 11th, when Miss Harriet Maude Kenny, daughter of Mr. Thos. Kenny, lumberman, of Ottawa, was united in marriage to Mr. Jas. B. MacLaren, of Ottawa, son of the late Jas. MacLaren, of Buckingham. The young couple left for an extended trip to Europe.

Mr. N. A. Rhodes, president of the Rhodes, Curry Company, was on February 2nd elected Mayor of Amherst, N. S., by a large majority. His popularity was, evidenced not only by the vote, but by the enthusiasm with which the announcement of his election was received. This is the first time Mr. Rhodes has permitted himself to be nominated for a public position.

THE NEWS

—John Jeffrey has established a saw and shingle mill at Spence, Ont.

—W. H. Wooley has opened a wood-turning factory at Brookfield, N. S.

—Tuttle & Jackson, lumber dealers, Strathcona, N. W. T., have dissolved partnership.

—The D. Macoun Lumber & Hardware Company, Macoun, N. W. T., has been dissolved.

—The dissolution is announced of Dumont, Fontaine & Company, sawmillers, Gentilly, Que.

—The Telford Lumber Company, Limited, of Prince Albert, N. W. T., has been incorporated.

—The will of the late E. W. Rathbun, of Deseronto, has been probated. His estate is valued at $216,825.

—Ansley & Stewart, lumber dealers, Rouleau, N.W. T., have sold out to the Imperial Elevator Company.

—W. A. Findlay, lumber and furniture, Shoal Lake, Man., has been succeeded by Findlay & Stonehouse.

—A new steam saw mill has been completed at Gordonsville, N.B., by Messrs. Stickney, Drake & Brooks.

—The capital stock of the Gilmour Door Company, Limited, Trenton, Ont., has been increased to $250,000.

—J. T. Marchand, president, has registered the business of J. T. Marchand & Company, lumber dealers, Montreal.

—Harry G. Miller has purchased the lumber business of the North-West Lumber Company at Magrath, N. W. T.

—J. H. Poirier and D. McGrath have organized the Roxton Mills & Chair Manufacturing Company, Roxton Falls, Que.

—The Keewatin Lumber Company, of Keewatin, Ont., are building a tie mill on the Burton property near that place.

—The Moose Mountain Lumber & Hardware Company, Limited, of Arcola, N. W. T., are opening a branch at New Hope.

—Mr. Henry Eidt, of Hanover, Ont., has recently sold his sash and door factory to Spiers Bros., who will continue the business.

—The Construction Company, Limited, recently formed with a capital of $500,000, will build a planing mill at Toronto Junction, Ont.

—The planing mill and lumber business of George Steele, Smith's Falls, Ont., will hereafter be conducted in the name of Steele & Company.

—J. M. Logan, of Hampton, is establishing a factory at Coldbrook, N.B., for the manufacture of excelsior. He expects to use poplar very largely.

—Watson & Button, of Wingham, Ont., have made aproposition to the Town Council of Regina, N.W.T., to erect a sash and door factory there.

—S. P. Musson, Son & Company, timber importers, arbadoes, have admitted Mr. F. A. C. Collymore as a partner, the firm name remaining unchanged.

—The Moose Mountain Lumber & Hardware Company have appointed R. F. Hay, of Winnipeg, as manager of their branch at Arcola, N.W.T.

—The name of the L. T. Dundas Company, Limited, a British Columbia corporation, has been changed to the International Logging Company, Limited.

—The John Campbell Company, Limited, has been incorporated at St. Thomas, Ont., with power to manufacture cereal products, staves, heading, hoops, etc.

—The Shevlin-Clarke Company, Rainy River, Ont., has been re-incorporated under the name of the Rainy River Lumber Company, Limited, with a capital of $1,000,000.

—J. O. Gilbert & Sons, who operate steam saw and planing mills at Bishop's Crossing, Que., have secured a large stock of logs for their mill and will begin cutting immediately.

—J. S. Ainslie & Bro., of Comber, Ont., recently hauled a remarkable load of logs. It consisted of two large sycamore logs and one elm log, measuring 5,507 feet. The load was drawn with one team of horses.

—The Macleod Advance states that the Lyndon Lumber Company, composed of Calgary men, have established a saw mill on Lyndon Creek, about six miles north of Lyndon, N.W.T.

—The British Columbia Government have granted a charter of incorporation to the Crothers Lumber Company to conduct a lumber business in that province. The capital stock is $24,000.

—The Empire Lumber Company, Limited, has been incorporated by the British Columbia Government, with a capital of $3,000,000, to carry on business as timber merchants and saw mill proprietors.

—Incorporation has been granted to the Cascapedia Manufacturing & Trading Company, to manufacture lumber, doors, sashes, blinds, pulp wood, etc. The head office will be at Cascapedia, Que.

—The Fowlds Company, Limited, Hastings, Ont., has been incorporated, with a capital of $40,000, to manufacture and deal in lumber. The directors are J. D. Berry, C. R. Fowlds and W. D. Berry.

—The Mains Planing & Manufacturing Company, of Hartney, Man., has been formed into a joint stock company, having a capital of $50,000. It is proposed to enlarge the factory and install new machinery and a dry kiln.

—The Dudswell Lumber Company, of Dudswell Junction, Que., have just built a new steam saw mill with a capacity of about forty thousand feet per day, and are now running full time, with a large stock of logs in their yard.

—O. M. Bishop, operating a water power saw-mill at Bishop's Crossing, Que., has secured a large stock of logs, but is handicapped on account of the extreme drought from which that section has suffered severely for the past eight months.

—The offices of the Arbuthnot Lumber Company, corner Logan and Princess streets, Winnipeg, were partially destroyed by fire a few weeks ago. Practically all the office fittings and furniture were destroyed, the loss being about $5,000.

—The Dalhousie Lumber Company, at their annual meeting last month, elected James Manchester, George McKean, Joseph T. Knight, Henry Hilyard and A. H. Hilyard as directors. This company recently bought the Moffatt saw-mill at Dalhousie, N. B.

—A charter has been granted to Robert Stewart, Limited, to acquire the lumber business of Robert Stewart at Guelph, Ont. The capital stock of the new company is $100,000, and the provisional directors are Robert Stewart, R. D. Stewart and E. S. Singer.

—W. G. Boggs has retired from the lumber firm of Martin & Boggs Company, Cheboygan, Mich., and the business will be continued by W.L. Martin & Company. Their Canadian headquarters will be at Parry Harbor, Ont., as heretofore.

—Wm. Power, M.P. for Quebec West, who has large lumber interests at St. Pacome, on the Riviere Ouelle, has commenced the erection of a double cutting band saw mill, the first of its kind in the province of Quebec. The new mill will likely be completed by May.

—Wm. Currie, of Campbellton, N. B., John McLean, of Sussex, and others, have been incorporated as Wm. Currie & Company, Limited, to carry on the lumbering, foundry and general mercantile business of Wm. Currie at Campbellton, N.B. The capital stock is $70,000.

—The British Columbia Logging & Lumber Company, who were compelled to discontinue the exportation of logs on account of the new timber laws, have applied to the Board of Trade of Nanaimo for a free grant of a ten-acre site on which to erect a saw and shingle mill.

—The annual meeting of the Alexander Gibson Railway & Manufacturing Company was held at Marysville, N.B., recently. The directors elected subsequently chose the following officers: President, Alexander Gibson, sr.; vice-president, Alexander Gibson, jr.; secretary-treasurer, H. H. McLean.

—Kilgour Shives, of Campbellton, N.B., was the owner of a wharf at that place which was expropriated by the Dominion Government for railway purposes. Mr. Shives declined to accept $5,000 and went to the Exchequer Court. Judge Burbridge referred the question of compensation to W. H. Thorne, George McKean and George McLeod, who have fixed upon $35,000 as the amount to be paid Mr. Shives.

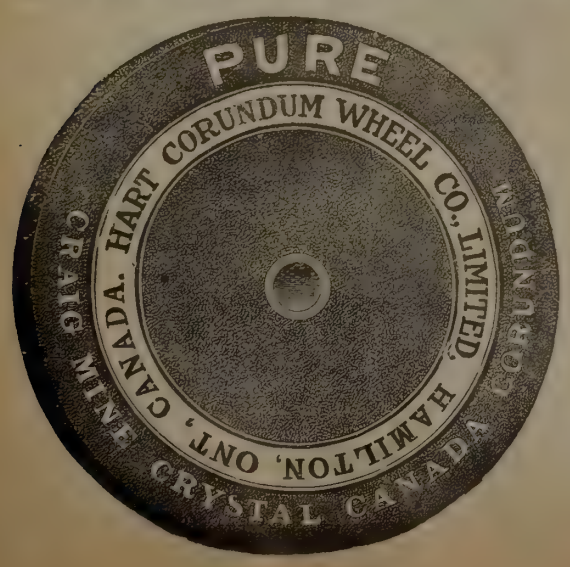
—Owing to the death of Henry P. Lawrence, the firm of Jacob Lawrence & Sons, carrying on a lumber and cooperage business at Watford and Sarnia, Ont., has been dissolved. The Sarnia bosiness will be carried on by W. F. Lawrence under his own name, and the Watford business by Mrs. Mary A. Lawrence, the widow of deceased, for two sons of the deceased, as provided by his will.

—The Ottawa Lumber Company, of Ottawa, have purchased the Malloch mill property in Arnprior, comprising 15 acres of piling ground, half mile of railway siding, saw mill, planing mill, dwelling houses, stables, blacksmith's shop, wharves, booms, piers and one mile of frontage on Shaw Lake. This mill has been operated for the last several years by J.R. & J. Gillies, and has a sawing capacity of about 60,000 feet per day.

—J. O. Gilbert & Sons, of Bishop's Crossing, Que., have recently built a steam saw and shingle mill at East Dudswell, Que., where they own a large tract of timber. They now have a large crew of choppers making logs. They also buy large quantities from farmers in the vicinity. As it has been an exceptionally good season for logging, they will have their yards well filled.

—We wish to contradict the statement made in the February number that the saw mill of the Saginaw Lumber & Salt Company, at Sandwich, Ont., is sinking into the marshy ground and that it is likely to be rebuilt on another site. The company advise us that the report is not true, as their mill is not located on soft ground at all; on the contrary, it is built on hard-pan with the very best of foundations, and consequently has not settled in the least.

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says:

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by Canadians for Canadians.

HART CORUNDUM WHEEL COMPANY, Limited, Hamilton, Ont., Can.

WOOD PULP DEPARTMENT

THE WOOD PULP MARKET.

The wood pulp situation is decidedly strong. There is very little pulp on the market and mills in both Canada and the United States are closed down on account of low water and frozen streams. The continued low temperature increases the seriousness of the situation, while the delay in receiving shipments has affected the mills that had contracted for their supply of pulp wood. In the State of Maine there is very little pulp being ground. Importations of pulp from abroad are being made by paper manufacturers in the United States in order to relieve the situation. It is stated that about 10,000 tons have been contracted for, three of the cargoes, or approximately 7,000 tons, having been ordered by the International Paper Co. Two or three of the smaller news manufacturing companies are reported to have cabled for Norwegian pulp and the receipts from that quarter will afford a temporary relief. It is not expected that there will be any surplus pulp for sale before May at the earliest.

Scandanavian pulp prices are also advancing. The Fermand in a recent issue says: "The value of most mechanical pulp, good ordinary brands, may to-day be quoted Kr. 30 to 31 per ton f.o.b., which means a hardening of from 1 to 5 Kr. since the turn of the year. Cellulose continues hardening; the value may now be quoted Kr. 126 for strong and Kr. 137 for easy bleaching f.o.b., or fully Kr. 10 more than a year ago."

PULP MILLS ON THE LAKE ST. JOHN.

The following is a list with capacity per annum of the mills on the line of the Quebec and Lake St. John Railway:

Metabetchouan Pulp Company, Metabetchouan; capacity, 15,000 tons pulp (under construction.) Arch. Racine, president, Quebec; Jos. Ed. Caron, secretary-treasurer, Quebec.

Ouiatchouan Pulp Company, Ouiatchouan Falls; capacity 15,000 tons pulp. Et. Paradis, president, Quebec; J. I. Lavery, secretary-treasurer, Quebec.

Jonquiere Pulp Company, Jonquiere; capacity 3,000 tons pulp, 4,500 tons of cardboard. Wm. Price, president, Quebec; F. W. Dension, superintendent, Jonquiere.

Peribonca Pulp Company, Peribonca; capacity, 9,000 tons pulp. Hon. A. Robitaille, president, Quebec; P. A. Potvin, secretary-treasurer, Quebec.

Chicoutimi Pulp Company, Chicoutimi; capacity, 40,000 tons pulp. Hon. N. Garneau, president, Quebec; J. E. A. Dubuc, managing director, Chicoutimi.

Sissons Pulp Mill, Bourg Louis; capacity, 1,500 tons pulp. Geo. Sissons, proprietor, Bourg Louis.

St. Raymond Company, Limited, St. Raymond; capacity, 6,000 tons pulp. Jno. Macfarlane, president, Montreal; F. W. Evans, vice-president and secretary-treasurer, Montreal.—Pulp and Paper.

THE CHATHAM PULP MILL.

Cruisers who have been sent over the Chatham, N.B., pulp mill lands by the Bank of Montreal report that they are much more valuable than was supposed and have been damaged by trespassers less than was thought. It is calculated, from the estimates of practical woodsmen, that sufficient pulp wood can be cut on these lands to supply a mill making 70 tons of pulp a day for all time. The 262 square miles of timber land belonging to the mill is a very valuable asset and is growing more valuable every year.

Now that the legal complications that tied the hands of the new owners of the property so long are ended, and the Bank of Montreal is offering the mill for sale, everybody should render it all the help in their power. With a smaller capital on which to pay interest, and more economical and intelligent management, there is no reason why the mill may not be operated profitably to the owners as well as to the public.

CANADIAN WOOD PULP EXPORTS.

A notable increase is shown in exports of Canadian wood pulp. In the fiscal year 1902 the export amounted to $2,046,398, and in 1903 to $3,150,943. In the two years the distribution was:—

	1902.	1903.
Great Britain	$818,500	$1,129,173
Australia	2,094	719
Belgium	9,199	217,470
China	856	—
France	40,965	200
Germany	—	25
Holland	993	—
Italy	1,496	—
Spain	1,815	—
Japan	—	7,588
United States	1,170,400	1,795,768

The above figures show that Great Britain increased its purchases by $300,000, the United States by upwards of $600,000 and Belgium by more than $200,000.

PULP NOTES.

The output of the pulp mill at St. George, N.B., has been increased to forty tons per day.

The Belgo Pulp & Paper Company, of Shawinigan Falls, Que., expect to commence the manufacture of paper this month.

The St. John Lumber Company, in which considerable New Brunswick capital is interested, have decided to build large pulp and paper mills near their saw-mill three miles above Van Buren, on the St. John river in Maine.

The water power on the St. Francis river at Trenholmville, about six miles from Richmond, Que., has been purchased by E. W. Tobin, M. P., and F. N. McRae, of Sherbrooke. They propose to build a dam and pulp mill during the coming summer.

A committee appointed to inquire into the position and prospects of the St. John Sulphite Co., Limited, of Mispec., N.B., has, according to a report from London, recommended that the company work up the existing stocks of raw material and thereafter close the mills until the prices of pulp shall advance.

Matters are assuming definite shape with regard to the new pulp mill to be erected at North Bay, Ont., by J. J. Warren, of Toronto, and his associates. It will likely be commenced this spring and will cost about $200,000. The town has voted a bonus of $15,000 towards the enterprise, which is to be paid when the mill is completed.

The Petewawa Lumber, Pulp & Paper Company has sold out to the Petewawa Power Company, Limited, which has recently been incorporated by the Ontario Government. The capital of the latter company is $250,000, and the promoters include Duncan Donald and M. P. Vander Voort, barristers, and C. H. McArthur, broker, all of Toronto.

C.B. Bride, mill architect and engineer, of Appleton, Wis., recently sent W. R. Smith to British Columbia to confer with representatives of the Western Pulp & Lumber Company regarding plans for proposed mills. Mr. Smith will examine and report upon the available water powers in the vicinity of Kamloops, which place, it is thought, offers the best facilities for the establishment of the proposed enterprise.

Last year the settlers in the Bella Coola district of British Columbia made a bargain with Robert M. Thompson, a company promoter of Tacoma, Washington, to the effect that if he would build a pulp mill in the settlement they would allow him to cut the pulp wood from their farms free of charge, the mills to be of a capacity of 125 tons of pulp per day. The settlers signing the agreement hold an aggregate of 6,700 acres of land, a greater portion of which is covered with spruce, cottonwood, fir and cedar. The agreement is to last for forty-two years, the settlers retaining a portion of the timber for their own use. Accordingly, Mr. Thompson formed the Bella Coola Pulp and Paper Co., the charter of incorporation giving the company the right to establish both pulp and paper mills. Timber cruisers have been at work on the property and they are said to have selected no land running below from one million to two million feet to the forty acres, and the timber is all within two miles of the very best of driving waters.

There were imported into the United Kingdom during 1903 232,892 tons of chemical pulp and 343,111 tons of mechanical pulp, as compared with 198,604 tons and 327,195 tons respectively in 1902. Of the total in 1903 83,711 tons, or less than 16 per cent., were received from Canada. Norway's percentage was over 53 and Sweden's over 27. The official returns show the following classification:

	1902 Tons.	1903 Tons.	Increase or Decrease.
Chemical—dry	185,443	211,613	+26,170
" —wet	13,161	21,279	+ 8,118
Mechanical—dry	11,103	6,323	— 4,780
" —wet	316,092	336,788	+20,696

The comparative values stand as under:—

	1902	1903	Increase or Decrease.
Chemical—dry	£1,507,555	£1,640,644	+133,089
" —wet	65,204	82,012	+ 16,808
Mechanical—dry	66,280	30,707	— 35,573
" —wet	759,176	752,300	— 6,876

LUMBER CONVENTION POSTPONED.

Owing to the fact that Mr. J. L. Campbell, the president of the Western Retail Lumbermen's Association, who is recovering from a severe illness, will not be sufficiently restored to health to attend the annual meeting of that association on March 2nd, it has been decided to extend the date of the meeting to Wednesday, March 23rd. The convention will be held in the Eureka Hall, Winnipeg, commencing at 3 o'clock p. m. and continuing on the following day.

Delegates and their wives will be granted transportation upon the following conditions: If an attendance of one hundred or more delegates, at the rate of one fare goining and returning; if an attendance of twenty-five or over, at the rate of one fare and a third. Delegates are requested to obtain standared certificates from the agent when purchasing tickets.

MAYOR WILSON OF COLLINGWOOD.

In introducing to readers of this Department Mayor Daniel Wilson, of Collingwood, the statement need scarcely be made that he is at the head of one of the most complete and up-to-date planing mill and wood-working plants in Canada. From a modest beginning he gathered together a great fund of information regarding the utilization and manipulation of lumber and has employed his knowledge to good account in the management of the business with which he is associated. His firm, Wilson Bros., are manufacturers of doors, sash, blinds, mouldings, hardwood flooring and all kinds of dressed lumber.

Mayor Wilson was born in Collingwood in 1861. He received a common school education and started at the age of fourteen to work in the shingle, heading and stave factory of George Buck & Company. At seventeen he went to learn to grade lumber at Christie, Kerr & Company's mill, remaining there three years, working at the mill in the summer and in the woods in the winter. The following two years were spent with Peck & Son, of Duluth, sorting and piling lumber, working in the woods, river driving and rafting. He then returned to Collingwood and for three years was employed by George Buck & Company in grading lumber in the summer and scaling logs in the winter. For a little over a year he was employed by George Gall, of Toronto, as lumber inspector.

In the latter part of 1887, in company with his brother, Mr. Wilson leased a small planing mill in Collingwood and started manufacturing builders' supplies and contracting under the name of Wilson Bros. Their trade was local at first but steadily grew in volume and area. Two years ago his brother withdrew to devote his time to architecture, and Mr. Wilson took in as a partner Mr. A. Matts, who had been their outside foreman, continuing the business under the same name.

The business of Wilson Bros. was very successful from the start; new customers have been constantly added and rarely has an old one been lost, nor has it been necessary to

MAYOR WILSON, OF WILSON BROS., COLLINGWOOD

shut down the factory for one day for want of work. They employ constantly from fifty to one hundred hands, shipping their product from the Atlantic to the Pacific coasts. The subject of our sketch has had charge of the machinery and shop management, and he takes a pardonable pride in pointing to their plant as one of the most modern planing mills in Canada. He is a constant reader of trade journals, concerning which he says: "We have taken a number of these because we thought we could not do without them, one article often paying us directly more than the cost for several years."

Mr. Wilson was first elected to the Council in 1896, serving for seven consecutive years. He has always retained the confidence of the electors, being successful each time he has sought public honors. He was elected Mayor for the current year by a good majority. Mr. Wilson also takes an interest in society work, being a P.M. of the Masonic Lodge and P.G. of the Oddfellows' Society.

DRESSING LUMBER.

The plan in some of the most modern machines of dressing lumber with the bottom cylinder before it is finished with the top cylinder, and then matched, has advantages that cannot be overstimated, more particularly in a mill that works hardwoods, some of which is oak that may have been on sticks a long time and be as hard as a bone on the surface. From my experience with this kind of lumber, says H.C. Miner, in The Wood-Worker, I always prefer to run the rough stock through the surfacer on the worst looking side, and it intended for flooring, as in the case of the last lot, rip it to the required width, then run it in the matcher for the finish, in this way getting a first-class job without wearing out half the knives in the mill and doing so much changing of knives on the matcher.

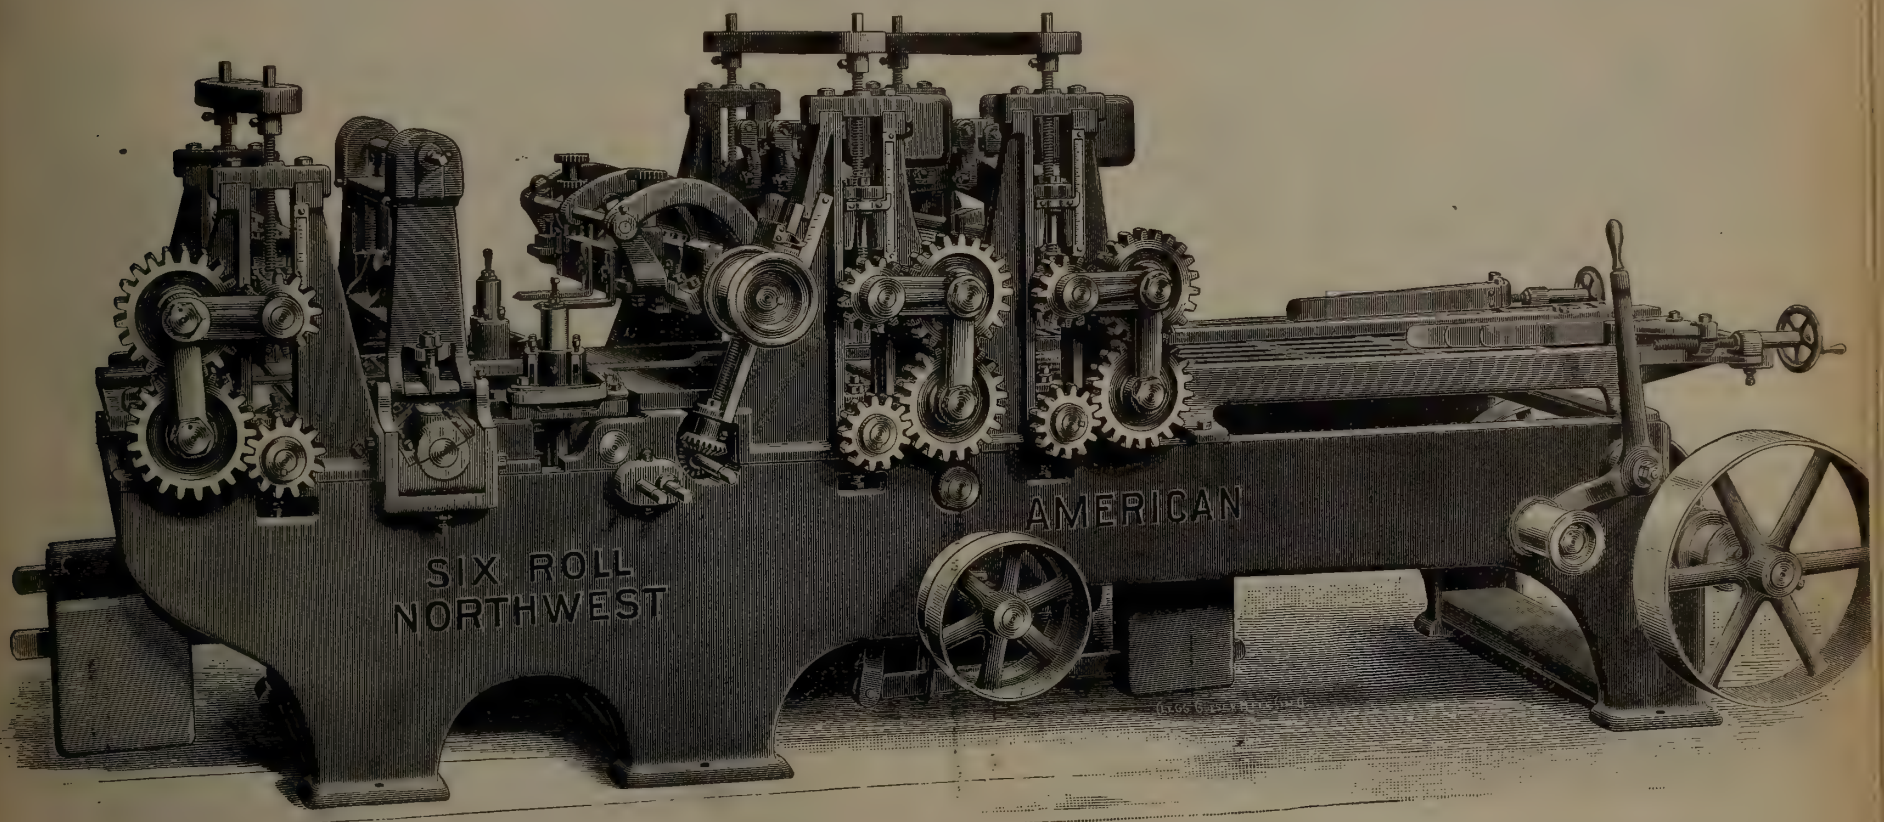
But the trouble with this method is, it does not work out on paper, in the office. It is such an easy thing to figure on how fast a big matcher can make this sort of flooring, finished at one run, by figuring the product on the lineal feet of feed per minute, but it does not come out with the figures all the time, for reasons beyond the control of any operator. In dressing the bottom first, in running the stock to a finish at one run, the cut by the bottom knives has to be a light one to avoid making stock too scant for the top knives to finish, and this light cut in the hard surface soon wears the bottom knives off to a point where they will no longer cut, and, when taken off, they look as if they had been on an emery wheel too long in one spot.

As they wear down this way, the front platen has to be changed often to keep them cutting. Then they wear too far down to allow the back platen to carry them properly, and there are soon rough spots in the work, then rough ends, and, finally, a new pair of knives and a new setting of the machine. What this hard surface would do to a pair of cutters on a Shimer head would be a plenty. But all this trouble could be avoided and the time of changing saved by sizing the lumber first. But you cannot always make some people see things as they are. A pencil, a tablet of paper, and the man who does not know, but has the right to say, make a combination that has been the undoing of more than one man whose knowledge and experience are being paid for at a big price, and then set aside by a man who is only on speaking terms with mechanical knowledge and planing mill facts.

Woodworkers are requested to submit contributions for publication in this department.

OPERATION OF PLANER KNIVES.

Some people have an idea that if a planer knife is set out too far it will cause wavy work by the cylinder, and this setting out from the lip of the cylinder, says a writer in an exchange, need not be more than 3/8-inch, or about that. With a planer knife 3/8-inch thick, well bolted to the cylinder, it seems to me to be a far-fetched claim to suggest that it might be the projection of knife that would cause wavy work. As to the projection of a knife causing "chipping" or tearing of the grain, that is another question. How far we can go in assuming that this would be the correct theory, may be judged by the knives on a moulder, where the work done by the knives with the longest projection is equally as good as that made by the knives with a projection of no more than 1/8-inch. Personally, I do not think I would lose any sleep over the projection theory, for the results obtained from using knives both ways have been like and unlike, under varying conditions. As an instance of how this works I might mention having a planer that will tear the knots out of every board that goes through it when the knives are set 1/16-inch from the lip of the cylinder, while a projection of 3/16-inch, with a double bevel to the knives, gives the best results, with smooth dressing on the solid knots. A loose knot will come out, no matter how the knives are set. Planing machines usually have the top cylinder to raise and lower, and some types of the travelling-bed machines are made this way. In that type of machine with a yielding pressure roll there is no adjustment to make for a slight variation in the knife projection, and as there is little or no difference in the work on the common run of machines, I cannot see where the pay for all the worry comes in while we are wasting our gray matter over a fraction of an inch on a knife.



Six Roll Northwest Double Planer and Matcher.

SIX ROLL NEW NORTH-WEST PLANER AND MATCHER.

We illustrate herewith a 26 x 8 six roll New Northwest Planer and Matcher, with divided in-feeding rolls. It is also built with solid rolls. The feed consists of 6-inch rolls, four in-feeding and two delivery rolls, rear of under cylinder. In the divided roll machine the first two top rolls are divided into two sections, and they are so arranged that they have the same power to feed as a solid roll, whether used separately or together. Each section of the rolls will yield independently of each other; consequently will feed two pieces of material of an unequal thickness at the same time, having a perfect bearing full width of each piece of material that is being worked.

The divided hood or chip breaker works in connection with the divided roll. Machines with divided rolls are supplied with centre guide. It will surface 26 inches wide on two sides up to 8 inches thick, without removing the side spindles; will joint or match four sides from 2½ inches up to 20 inches wide, and ¼ inch to 6 inches thick.

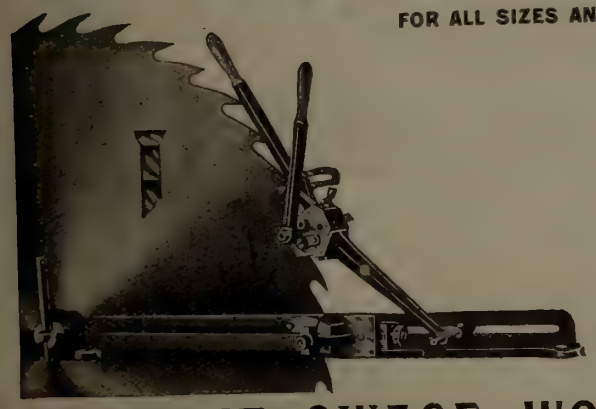
Cylinders are steel forgings, four sided and four slotted. The top and lower cylinder journals are 2 inches in diameter, with extra long bearings. Knives are interchangeable and can be used on either top or lower cylinder. The pressure bar over the under cylinder is hinged on both sides, and can be swung to either side of the machine by loosening one nut, thus giving quick access for sharpening or setting the knives on the lower cylinder.

Each machine is furnished with two 26-inch knives for each cylinder, one pair (2) two-winged matcher heads, with set of milled matcher bits,(these heads will take in cutters up to 2½ inches wide), two beading knives, two novelty siding knives and necessary wrenches. Six-inch four side jointer heads or circular bit matcher heads are extra. There are two rates of feed—26 and 50 lineal feet per minute.

This planer and matcher is manufactured by the American Wood-Working Machinery Company, 136 Liberty Street, New York, and 43-45 South Canal Street, Chicago.

The Hanchett Adjustable Saw Swage

FOR ALL SIZES AND KINDS OF SAWS—CIRCULARS, BANDS, BAND RESAW, CYLINDER AND GANG SAWS.



HANCHETT SWAGES DO GOOD WORK

Because they are made of the best material and put up b skilled mechanics—hence long life of swage. They are compact, solid and strong—quick and accurate in their work. We invite comparison. Tests establish facts. Let us send you one. Try it. If you are not pleased or can afford to let it go out of your filing room you are to return it at our expense. We ask you it this is not a fair proposition.

TRADE NOTES.

The new lumber firm of Chestnut & Slaght, Buffalo, have opened an office in Ellicott Square and are doing a good business. Mr. Chestnut was formerly with H. M. Loud's Sons, and Mr. Slaght was with the sales department of Scatcherd & Son.

The attention of our readers who use belting is directed to the advertisement in this number of Mr. P. H. Wilby, Toronto, who handles a number of different lines of English belting adapted to the requirements of saw-mills and wood-working factories.

Attention is directed to the page advertisement in this issue of the American Wood-Working Machinery Company, New York and Chicago. This company manufacture blind wirers, borers, box-board matchers, chair back bending presses, clamps, dado machines, dovetailing machines, grinders, lathes, mitre machines, mortisers, moulders, panel raisers, presses, planers, rod and dowel machines, sanders, saw arbors, shapers, special sash and door and blind machinery, etc.

Messrs. Joshua Oldham & Sons, manufacturers of machine knives and saws of every description, of 26th street, Brooklyn, are making a big effort to secure a large share of the Canadian market, their efforts being attended up to the present date with a marked degree of success. Founded thirty years ago by the now president, Mr. Joshua Oldham, an English saw maker, the firm has had a career of unbounded success in the United States, their long experience enabling them to become thoroughly grounded in the nature and construction of steel as to its use in the manufacture of saws. They possess many patent processes and much machinery for heating, hardening and tempering special grades of steel, an oxidation process and other details which all tend to assist in procuring saws of excellent merit. Their advertisement, which appears in this issue, is in itself a model of excellence which tends to prove the enterprise and energy which has always been a characteristic of this prosperous and successful firm, enabling them to recover from the results of a great fire and heavy losses in the short space of twelve months without losing an order.

The Goderich Planing Mill Company, Limited, of Goderich, Ont., have elected the following officers: President, Jas. Buchanan, sr.; vice-president, J. T. Goldthorpe; secretary, J. Lawson; manager, Jas. Buchanan, jr. The company intend installing a new boiler and engine.

CASUALITIES.

Henry Curtis was severely injured in the Tobique lumber woods by a log rolling over him. He lived at Bristol, N. B.

John E. Schissler, an employee of the Victoria Harbor Lumber Company, was so severely crushed between two lumber cars that he died a few hours later.

George Karis, a Pole, employed as cook in the Pigeon River Lumber Company's camp near Port Arthur, Ont., was literally blown to pieces by dynamite on February 17th by placing the explosive which he was drying for the choppers too close to the stove.

A. Boyer met his death last month in his saw mill at Greenwood, Ont. While oiling a shaft his clothing was caught and he was thrown a distance of fifteen feet into the tailrace, striking a stone wall and being almost instantly killed. Deceased had resided in the township for many years, managing a saw and grist mill as well as farming, and was highly respected.

John McFadden and W. H. Cook, the former head log maker and the latter cook in Gilmour & Kennedy's shanty, three miles from North Wakefield, on the Gatineau Valley Railway, were pursued by a band of hungry wolves to the edge of Jamieson Lake. Their shouts brought assistance from some teamsters who carried Winchester rifles, with the result that one of the wolves was killed. Owing to the very severe cold and deep snow the wolves are more daring than usual this winter, and, deprived of their means of assistance, they have ventured into the vicincity of the lumber camps.

THE TIME TO QUIT WORK

The proper time to quit work is when **Clark's Pork and Beans** is served. Clark's is so good it gives a good excuse to start again. Only select Canadian pork and prime Canadian beans in the kind made by

LUMBER INSURANCE COMPANIES AND THE BALTIMORE FIRE.

The Toledo Fire & Marine Insurance Company of Sandusky, Ohio, announces that it suffered no loss in the Baltimore conflagration.

The Lumber Underwriters of 66 Broadway, New York, will lose only one small line, the amount of the policy affected being only $1,200. There is food for thought in the fact that at this time, when the large general insurance companies are anxiously summing up their millions of losses in the great conflagration, the lumber insurance companies are practically without loss. The lumber insurance companies maintain that there is no conflagration hazard in their business. They insure only widely scattered lumber and mill risks, and in the few places where two yards adjoin, or where there is a "lumber district," they carefully limit their lines. If North Tonawanda or the Chicago lumber district or similar districts should be swept by fire, the losses of these companies would not be excessive.

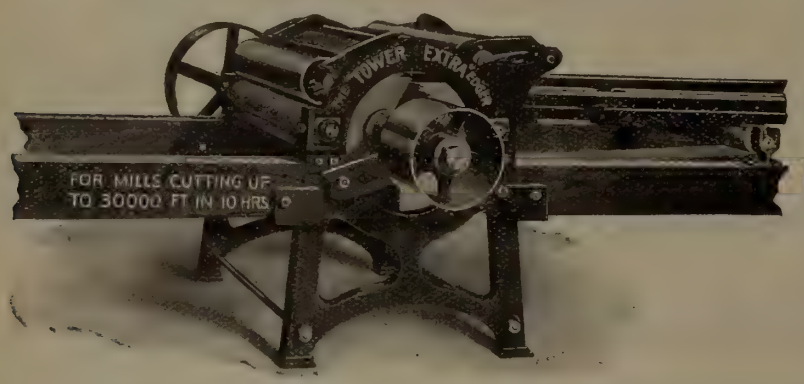
THE FAMOUS
TOWER LINE OF Edgers and Trimmers
Over 1,200 in daily use. Made in two sizes as follows:
The TOWER 2 and 3-Saw Edgers, Improved. For mills cutting not to exceed 20,000 ft. in ten hours.
The TOWER EXTRA 3-Saw Edger. A larger and heavier edition of the TOWER, for mills cutting up to 30,000 ft.



Among the many reasons for the great popularity of these celebrated Edgers are the following:
1. They take up little room.
2. They require little power.
3. The feed rolls are adjustable in FOUR directions, which means absolute accuracy.
4. The saws may be removed easily and quickly, without disturbing the arbor.
5. The mechanism for shifting the saws is up-to-date, convenient and positive.
6. The vital parts are carried by a substantial iron husk resting solidly on the floor.
7. They are pre-eminently practical.
8. There is no Edger made approaching them in cheapness.
We also manufacture the Gordon Hollow Blast Grate and the TOWER One-2-saw Trimmer.

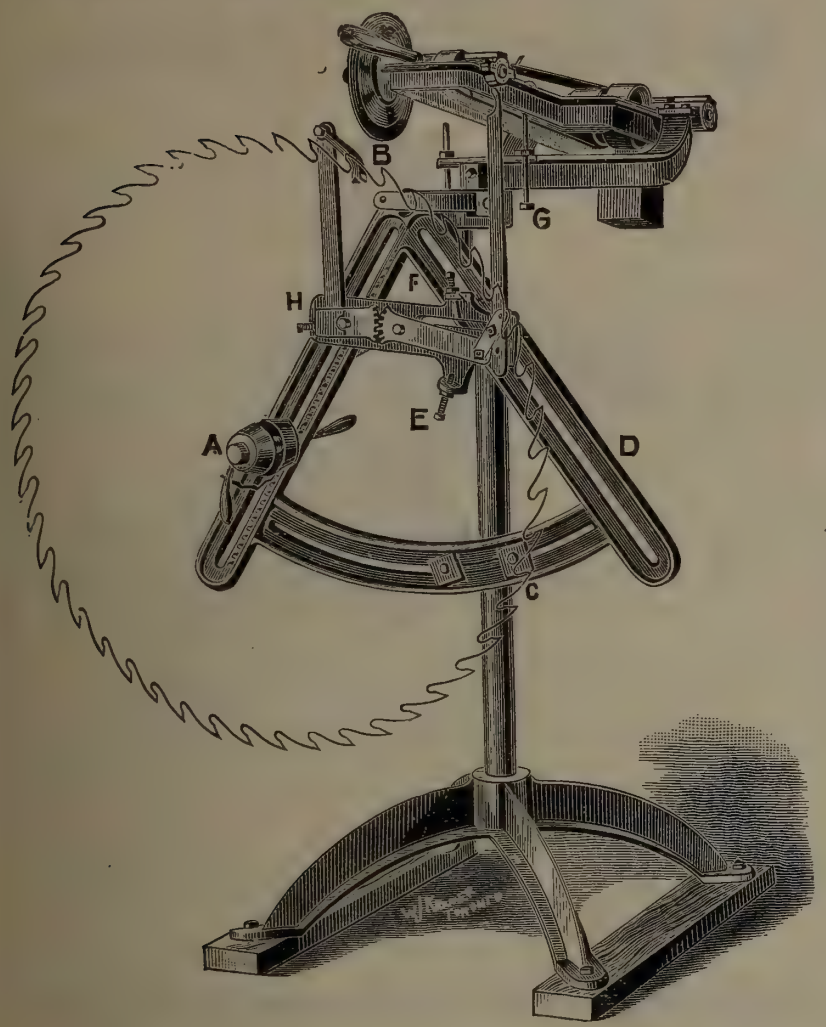
The XXX Saw Gummer and Sharpener



Has no Rival

FOR VARIETY, CAPACITY OR QUALITY OF WORK

OR FOR

SIMPLICITY, DURABILITY, CHEAPNESS

Will take saws from 6 inches to 6 feet in diameter; sets the saw forward one tooth at a time automatically; sharpens any saw perfectly, giving the teeth any desired pitch, and making all the teeth exactly alike. Will sharpen 20 teeth in an ordinary saw mill in one minute, or 100 teeth in a shingle saw in four or five minutes. The cut shows outline of mill saw 54-inch diameter.

PEMBROKE, ONT.

MR. F. J. DRAKE, Belleville.

Dear Sir,—Re the conversation you had with our manager, I am instructed to inform you that the machine we purchased from you early last spring has proved to be a very useful piece of machinery. Our Mr. McCool, who uses it, is greatly pleased with it, and recommends it to any person who may require a Saw Filer. Wishing you every success with your Filer, we remain,

Yours truly,

J. F. Porter, 355 Carlton Street, Winnipeg.

A Plain Truth, Plainly Put

It is a Lumber Drier's business to dry lumber as well as its merit permits.

It is **your** Drier's business to dry **your** lumber better and quicker and with less trouble than that particular lumber can be dried by any other drying process or any other Drier.

If your dry kiln doesn't do that, you can't **afford** to keep on using it.

THE STANDARD DRY KILN'S

Drying conditions can be perfectly regulated to suit **your** product—whether that's pine or oak or any other wood that grows.

So regulated, it will dry your lumber more quickly, more easily and more to your satisfaction than you will probably believe possible until you are convinced by actual everyday demonstration.

Please write for our Catalogue "D," if interested.

AN IMPROVED STEAM SETTING MACHINE

WITH ENCLOSED RATCHET SET WORKS

THE NEWEST AND BEST OF STEAM SETTERS

This machine is an improved form of the original Corry & Barker Steam Set. It will set four inches just as quickly as the standard and all hand machines set two.

Just the thing for mill men who saw timber and thick stuff for export.

The Ratchet Set is dirt proof.

So many interesting and money-saving features are incorporated in this machine it will pay you to write us.

It is positively guaranteed—we know what it will do.

The standard size machine is also a dividend payer, and continues to make friends among all mill men. It is the pioneer steam setter, and with our patented improvements, it is a necessity in all mills.

We manufacture everything for a saw mill. Write us.

THE

Wm. Hamilton Mfg. Co.

LIMITED

PETERBOROUGH, ONT.

R. H. SMITH CO., LIMITED

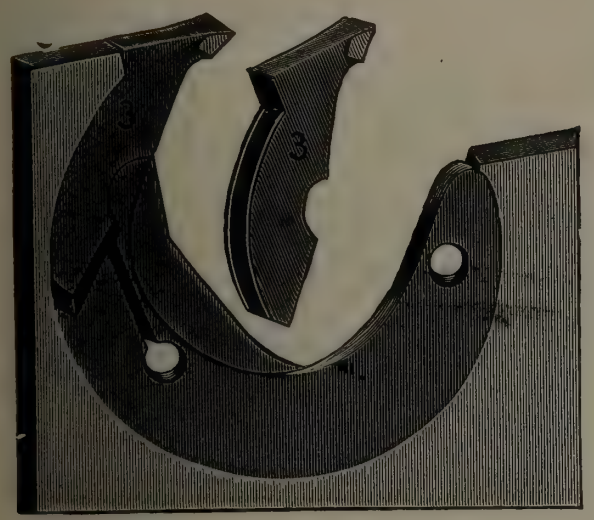
St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

Simond's Process

in the Dominion of Canada.

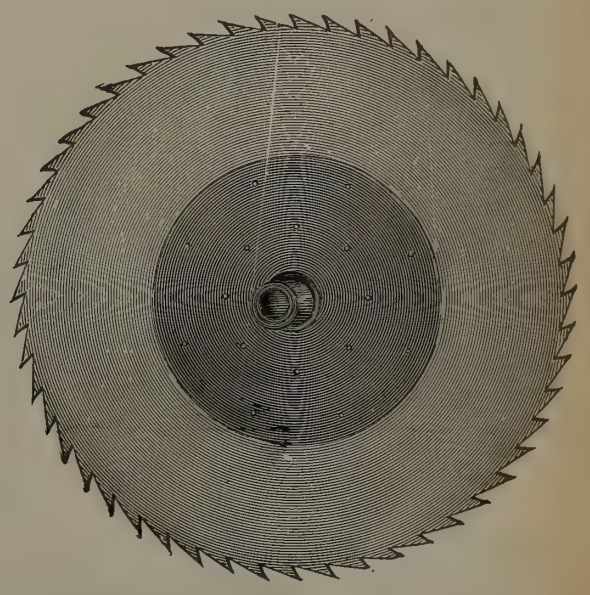
There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.



INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

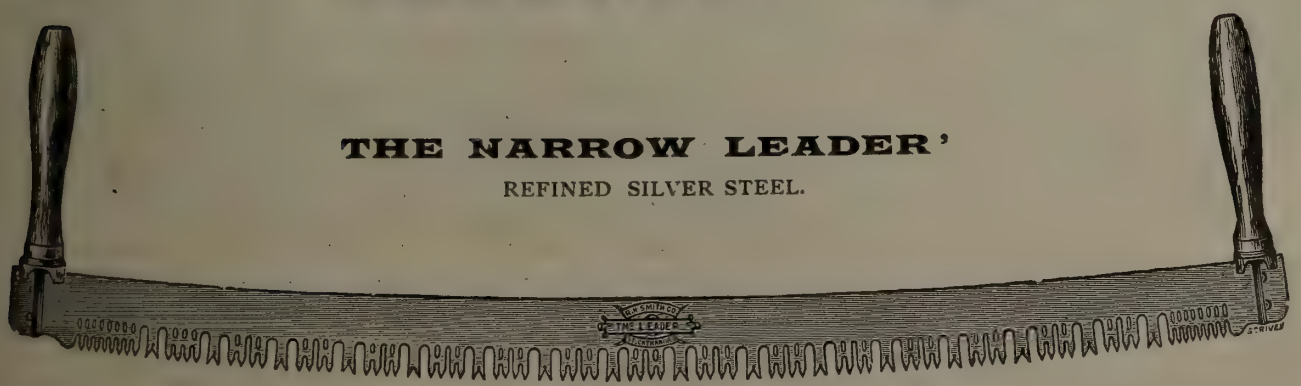


SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAW



The Simond's temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Write for prices.

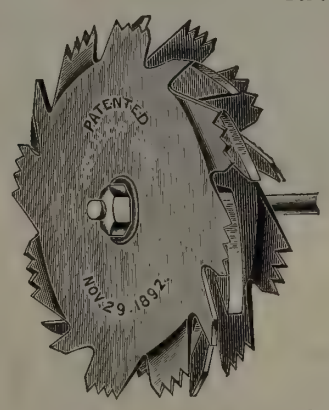
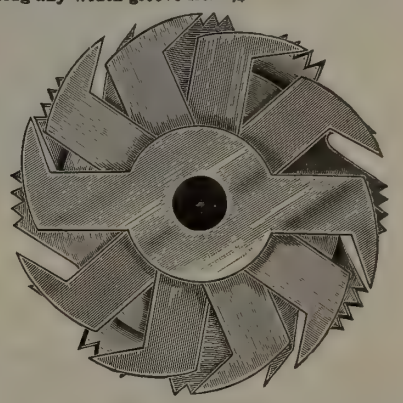
The Robt. Bell Engine & Thresher Co., Limited

SEAFORTH, ONT., CAN.

HUTHER BROS. PATENT GROOVER OR DADO HEAD

For cuttiug any width groove from ¼-inch to 2 inches or over





Can be used on any Circular Saw Mandrel. **Will cut a perfect groove with or across the grain.**

This is the only Dado Head on the market that gives entire satisfaction on all clasees of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of woodworking machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense. HUTHER BROS., Platt Street, ROCHESTER, N Y., manufacturers of Circular Saws, Morgan Pattern Lock-Corner Box Cutters, Concave Saws, etc.

Our Celebrated

Rotary Cutting Veneer Machines

made in over sixty sizes, have stood the test and proved equal to any proposition toreduce logs into thin lumber and veneers.

The product is high grade.
The output is great.
The cost of operating and maintenance is reduced to a minimum.
Quite a combination, is it not ?

Timber and mill owners should get in early.

Buy a Coe Veneer Cutting and Drying outfit and prepare to supply thin lumber and veneers which have a healthy growing demand. More money in it than sawing your logs into lumber.

CANADIAN FORESTRY ASSOCIATION

Large Attendance at the Fifth Annual Meeting in Toronto.—Valuable Papers Bearing on the Conservation and Reproduction of Forests, Followed by Interesting Discussions.—Quebec the Next Place of Meeting.

The fifth annual meeting of the Canadian Forestry Association opened in the Reception Room of the Parliament Buildings, Toronto, on Thursday, March 10th, at 10 a.m., the President, Mr., Hiram Robinson, of Ottawa, being in the chair. Among those present were the following: E. Stewart, Secretary, Ottawa; R. H. Campbell, Assistant Secretary and Treasurer, Ottawa; Hon. E. J. Davis, Commissioner of Crown Lands, Toronto; Aubrey White, Deputy Commissioner of Crown Lands, Toronto; Thomas Southworth, Director of Forestry, Toronto; E. G. Joly de Lotbiniere, W. C. J. Hall, Quebec; Hon. John Dryden, Minister of Agriculture, Toronto; Prof. Philbert Roth, College of Forestry, Ann Arbor, Mich.; Hon. J. E. Evanturel, Toronto; William Little, Westmount; Rev. A. E. Burke, Alberton, P.E.I.; Prof. Reynolds, Dr. W. A. Muldrew, Prof. H. L. Hutt, George Creelman, H. S. Peart, Guelph; Samuel Russell, M. P. P., Lanark; F. G. Todd, Montreal; Prof. W. L. Goodwin, G. Y. Chown, Kingston; E. J. Xativz, New Haven, Conn.; Norman M. Ross, J. M. Macoun, J. W. Wardrope, Ottawa; Thomas Conant, Oshawa; J. C. Shook, Peterboro; N. Silverthorne, Summerville, Ont.; James Gillies, Carleton Place; D. G. Cooper, Collingwood; Marcell Hoehn, Berlin; Anson Groh, Preston, Ont.; D. James, Thornhill; Valentine Stock, M.P.P., Tavistock; A. Hislop, M.P.P., Walton, Ont.; Rev. Dr. John Burwash, John Bertram, Prof. John Loudon, W. A. Charlton, M.P.P., William Houston, Prof. Galbraith, Prof. Ramsay Wright, G. B. Kirkpatrick, A. B. Leake, Prof. Squaire, S. S. Cann, Prof. J. H. Faull, W. Ryan, William Mahaffy, E. B. Biggar, J. J. Bell, T. S. Young, Toronto.

After the reading and adoption of the minutes of the last meeting, the President made a brief address, pointing out the importance of the forestry question. He referred to the danger of fire from the carelessness of settlers, hunters and others. He believed the Government officials were doing their best, but it was also necessary to educate the public.

REPORT OF BOARD OF DIRECTORS.

The report of the Board of Directors, submitted by Mr. Slewart, showed that the membership had increased from 400 in 1903 to 479 in 1904. Twenty-four new life members were added during the year. The financial report showed a substantial balance on hand. The receipts were augmented by a grant of $300 from the Ontario Government and $200 from the British Columbia Government. The report stated that a large percentage of the membership of the Association were in favor of an official organ to be devoted to the interests of forestry.

Owing to an extended period of dry weather in the summer of 1903, fires were numerous and resulted in considerable loss to timber. That the loss was not much greater is attributed to the efficient work of the fire ranging staff.

MR. AUBREY WHITE,
President-Elect of the Canadian Forestry Association.

Attention is called by the report to the possibilities of danger to the forests consequent on the construction and operation of railways. The establishment of a railway line through timbered land has usually resulted in disastrous consequences to the forests, largely owing to want of care on the part of the contractors and others in charge of the work of construction, as well as to lack of sufficient supervision by the companies operating the roads for the protection of this valuable asset. It was suggested that the Association give an expression of its views in such a way as to influence the authorities, both government and railway, to take such action as may prevent the development and extension of the Canadian railway system from becoming an agent in hastening needlessly the destruction of the forests.

The report further stated:

The operations of the Dominion Forestry Branch in connection with the tree-planting scheme have shown steady expansion. This is clearly evidenced by the figures of the distribution of plant material. In 1901, the first year of operation, 18 settlers were supplied with 63,780 trees, and for the present year, 1904, 1,030 settlers will be supplied, 1,700,000 trees having been provided for this purpose. The total distribution, including 1904, will be 3,210,467 trees and 1,518 lbs. of seed to 2,064 settlers. It is estimated that the applications for the year 1905 will reach the number of 2,300.

A recent estimate of the area of timber reserves under control of the Dominion places the figure at 15,135¾ square miles, or 9,686,880 acres, 3,449,600 acres being in Manitoba, 5,612,800 in the North-West Territories and 624,480 acres in British Columbia. A decision has been reached to open the Rocky Mountains Foothills Timber Reserve to disposal under license. As this reserve controls the water supply of a large part of Southern Alberta where irrigation is necessary for successful agriculture the conditions are unique, and the administration of this reserve should not be carried out on the same principles as are adopted in connection with other tracts. Licenses should certainly not be granted without an inspection of the limits, and there should be such supervision of the operations as to prevent injury to the water supply, whether through increasing the danger from fire or otherwise.

Your directors desire to draw the attention of the members of this Association, as well as that of the public in general, to the fact that a Commission was appointed by the Government of Quebec in March, 1902, to (1) Make a critical study of the laws and regulations respecting public lands, woods and forests, colonization societies, works and roads, and the protection of settlers, as well as the carrying out of such laws and regulations;

(2) To enquire into the number of causes of the difficulties between settlers and holders of timber licenses and to advise upon methods for their prevention and removal;

(3) To find out what are the sections of the country most suitable for colonization;

(4) To ascertain whether the present colonization roads are sufficient to give access to the good farming lands, the extent of surveyed lands large enough, and the work performed by colonization societies deserve encouragement;

(5) To enquire whether, in the interests of the colonization of the Province, it is ex-

pedient to contribute towards the building of certain bridges and to grant subsidies in lands to certain railway companies.

(6) To study the new proposals or systems which may be submitted to it, and, taking into account the financial resources of the Province, to recommend those which tend to amend the laws and regulations so as to foster colonization and the development of forest industries.

The scope of the Commission being a very wide one and the subjects to be investigated of vital interest to the Province of Quebec in particular, and of interest to all the other Provinces of the Dominion, the report of this Commission will be looked forward to with great interest.

The Province of Prince Edward Island has also appointed a Commission whose duties are similar to those of the Province of Quebec.

The consideration of the Directors' report resulted in a lively discussion as to an official organ, which culminated in referring the matter to a special committee, which subsequently recommended the publication of a monthly or quarterly journal as a means of disseminating information regarding the principles of forestry, the Board of Directors to complete the necessary arrangements.

Mr. Frederick G. Todd, landscape architect, of Montreal, read an interesting paper on "Our Native Forest Trees and Their Use in Ornamental Planting."

Forest Reproduction in Germany.

At the afternoon session a paper on "Forest Reproduction in Germany" by Dr. A. H. Unwin, late of the Dominion Forestry Branch, was read by Mr. Norman M. Ross. After naming the native trees of Germany, Dr. Unwin outlined briefly the system of forest reproduction adopted in that country. The principle of cutting a forest with regard to getting a regular and annual yield has been kept up from the start both where planting had to be done to restock the cut areas and also where the forest could be left unassisted to reseed itself. And it is to this that the splendid financial results are due which each state in that country now shows.

Calling the growing trees in a forest the forest capital, what they took and take was and is only the interest or what actually grows each year in wood, and with increased care and better management that capital has been increased from 26,040 feet B.M. to 31,800 feet B.M. per acre and the interest taken greater still in proportion as timber prices have risen. At the present time spruce pays about 4 per cent. on the capital represented when grown pure under a rotation of 90 years. This is on medium mountain soil in the Bavarian Alps. Fifty years ago these forests were just being used to their fullest capacity; before that they had scarcely been touched as being inacessible. Experiments with the reproduction of white pine show that it can be profitably grown or reproduced either by self-sown seeds or planting with three year old trees. In the former method the old and original crop is gradually removed, leaving spaces sometimes as much as half an acre between the trees where the young trees come up in large quantities. When the area is seemingly well stocked more of the old trees are taken, still leaving a few so as to insure all spaces being filled in. In this way it has been found that from the first cutting of the old stand to the complete clearance of the same and restocking of the area by self-sown seed it takes seven to ten years, this being done without any cost for seed or preparation of soil. The old stand is of a dense nature and so the forest soil is covered with needles and twigs which rapidly decay when exposed to the atmospheric agencies. This leaves the soil in a receptive condition for the seed. Most of the branches and tops of the trees cut down are either used as faggot wood or burnt. The spruce, the next most important tree to us, is largely reproduced by planting, or about 80 per cent. of all areas. This is done by cutting the forest by strips up the mountain side, moving in opposite direction to the prevalent wind. When a strip is first cut it is three-quarters to a tree's length in width. This gradually widens as the first area becomes re-seeded. Finally the first re-seeded area has become old enough to cut again. A rotation of 85 to 90 years is adopted and yields timber of 16 to 18 inches square on medium soil. This size pays best as, if left to get larger, the increase in price does not more than pay for the interest on the money represented by the original trees. The Scots pine, another important tree, and its counterpart, the Norway or red pine here, is one which must have a good future. This is usually planted as one or two years old untransplanted seedlings. In a few districts natural seeding takes place, when the old crop can be removed in three successive cuts with two years between each, the first being made previous to a seed year, the second after a good seed year, and the third about two years after the young seedlings have got started. Even then a few trees are left to stand over to re-seed blank spaces until the end of the rotation and produce very large timber.

Mr. John Bertram, of the Collins Inlet Lumber Company, and Chairman of the Dominion Transportation Commission, then read a paper on "Forest Management in Ontario", which appears on another page.

DISCUSSION.

Mr. N. Silverthorne, referring to the papers by Dr. Unwin and Mr. Bertram, stated that years ago it was said that pine would not follow pine, but this was contrary to his experience. Mr. Thomas Conant spoke of the difficulty of obtaining seeds to plant. He had obtained his supply from Germany, and had had better success in growing from seeds than in planting young trees. He had met with some success in planting black walnut trees, as of 10,000 trees planted, 7,000 were thriving.

Mr. Joly stated he had found it advisable to collect pine seeds in March, as the cones were open in the spring. He thought if seedsmen knew how easy it is to collect seeds they would give the matter more attention.

Hon. E. J. Davis spoke of the reforestry methods adopted by the Ontario Government. He hoped to have the regulations governing forest reserves in practical operation very shortly. He asked Mr. Bertram to give his views as to the policy which should be adopted in respect to berths sold to licensees where the pine timber only was disposed of, also as to what payment the Crown should receive if the licensees were allowed to continue in possession of the property in perpetuity. The buyer of a timber limit purchased only the timber on the berth, not what grew thereafter, consequently it was only fair that the Government should get some remuneration for the accretion if the license were made permanent.

Mr. Bertram was non-committal, but promised to give the Commissioner an answer at a later date. He referred to the changes in lumbering methods. Years ago the sole object was to cut down the timber as soon as possible and get the money out of it. After studying the question of forest reproduction, he adopted the opposite policy, and in his lumbering operations as now conducted he cut no more timber from year to year than the accretion of the timber. This was the true system of lumbering. He was glad to know that to-day many lumbermen were alive to the necessity of protecting the young pine.

Prof. Roth said the United States Government had set aside 60,000,000 acres of land as forest reserves, the policy originating in 1891. The timber on these reserves was sold on the stump and cut under the direction of the Government, which in his opinion was the only proper way. While the private individual made the best farmer, the state made the best forester. Touching upon forest fires, he said it was a great question whether it is not better to have people scattered through forest reserves, rather than a large tract uninhabited, as under the latter condition it is difficult to obtain help to extinguish a fire.

A paper on "Forestry Education" was read by Prof. Loudon, of Toronto University, which was followed by a discussion in which Prof. Goodwin, of Kingston, Prof. Muldrew, of Guelph, and others participated. On motion of Mr. Bertram, a resolution was passed requesting the Ontario Government to make an appropriate grant to found a school of forestry. This concluded the business of the day, and in the evening a banquet was held at the King Edward Hotel, at which about about one hundred persons were present. Mr. Aubrey White acted as chairman. The following responded to toasts: "Canada," Mr. J. W. St. John, M.P.P.; "Our Legislators," Mr. Valentine Stock, M.P.P., and Mr. J. T. Clarke; "Our Pioneers: The Lumberman and Settler," Mr. John Bertram and Hon. John Dryden; "The Forester: The Farmers Whose Crops are Trees," Prof. Roth; "Our Educational Interests," Prof. Chown and Prof. Ramsey Wright; "The Press," Mr. William Houston and Mr. John A. Cooper.

SECOND DAY.

The first paper on the programme for the second day was by Mr. Aubrey White on "The Crown Timber Regulations of the Provinces of Canada." It will be found elsewhere in this number. The paper created a discussion as to the tenure of licenses. Mr. Bertram said that the Ontario Forestry Commission, of which he

was a member, had recommended that the Government should assume control of large areas where the timber had been cut off and the limits abandoned, as they were a source of great danger to adjoining limits. In the last Government sale the time limit was fixed at fifteen years, which in his opinion was too short, and he believed the Government would see the advantage of making an extension to twenty years in future sales. What was to be done with the large quantities of spruce, hemlock, balsam, and hardwood trees found on what may be termed pine limits, was a question which required consideration. Pine would not germinate under the shade of these trees. He suggested that the Department of Crown lands take steps to ascertain whether the cheaper woods could not be cut out and utilized to advantage, and the pine thus given a chance to grow. It would be a great advantage if a cheap plant could be installed in the woods for producing extract of hemlock. A small plant for making mechanical pulp might also assist in solving the problem of the profitable utilization of the cheap coniferous woods.

Mr. White explained that timber licenses absolutely terminated on the 30th of April each year, which gave the Government the right to adopt new regulations for the following year. The licensee, however, had the right of renewal each year for the period covered by his license provided he complied with the regulations.

Prof. Roth said in respect to wood alcohol he understood quite a large plant was necessary before it could be operated at a profit. There was an acid plant at Cadillac, Mich., which was a paying undertaking. The gas and tar were used for fuel. He advised caution in endeavoring to get rid of timbers which now seemed worthless, as in later years they might be found very valuable.

Hon. Mr. Davis stated that where the lands are not suitable for agriculture the Government is considering means whereby the hardwood timber could be made available and be manufactured.

The discussion then veered to forest fires, and a resolution was passed specifying the period during which settlers should be permitted to set out fires.

A paper on "The Laurentides National Park" was read by Mr. W. C. J. Hall, of the Department of Lands, Forests and Fisheries, Quebec, followed by one on "Forestry in Relation to Irrigation" by Mr. J. S. Dennis, Commissioner of Irrigation for the Canadian Pacific Railroad.

Prof. H. L. Hutt, of the Ontario Agricultural College, submitted an interesting paper at the afternoon session on "Some Ontario Forest Problems." He said that what was needed at the present time was a larger staff of experienced foresters, who would personally oversee the forests of the north.

Mr. E. Stewart gave an interesting account of the progress of tree planting on the western plains. Of all trees planted 85 per cent. were growing. Including the allotment for this spring, the Government will have sent out over 3,000,000 trees, the cost of growing and distribution being about $1 per thousand trees. Last year an appropriation of $40,000 was made for the work.

The following resolution was passed: "That the Association urgeupon the Federal and Provincial Governments the immediate necessity of a thorough examination of the water courses of Canada, with a view to the proper maintenance of the forest growth so essential to the welfare of the country, also that in view of the early commencement of the proposed transcontinental railway, that the Government arrange an agreement with the contractors for an efficient control to prevent forest fires, and when built that the railway be asked to establish an effective patrol along the afforested line of railway."

Upon the invitation of Mr. Joly de Lotbiniere, it was decided to hold the next annual meeting in Quebec on the second Thursday in March, 1905.

The election of officers resulted as follows: Patron, His Excellency the Governor-General; Hon. President, Wm. Little, Montreal; President, Aubrey White, Toronto; Vice-President, E. G. Joly de Lotbinere, Quebec; Secretary, R. H. Campbell, Ottawa; Treasurer, Norman M. Ross, Ottawa; Directors, J. R. Booth, Ottawa; John Bertram, Toronto; Dr. Saunders, Ottawa; Prof. John Macoun, Ottawa; Thos. Southworth, Toronto; E. Stewart, Ottawa; H. M. Price, Quebec; Hiram Robinson, Ottawa.

At a subsequent meeting of the Board the following Vice-Presidents for Provinces were named: Rev. A. E. Burke, Alberton, P.E.I.; Hon. J. W. Longley, Halifax; Hon. J. B. Snowball, Chatham, N.B.; Hon. S. N. Parent, Quebec; Hon. E. J. Davis, Toronto; Sir Daniel McMillan, Winnipeg; Hon. L. J. Forget, Regina; Wm. Pearce, Calgary; F. D. Wilson, Fort Vermillion, Atha.; H. Bostock, Ducks, B. C.

HIGH PRICE FOR PINE TREES.

The owner of any number of large white pine trees is doubtless much richer than the average person imagines, as a recent transaction would indicate. There stands on the south side of Lake Scugog, in Ontario County, four hundred acres of timber, which is the only important block of timber in the vicinity. Two hundred acres of this is owned by Mr. Thos. Conant, of Oshawa, and one hundred acres each by Mr. Mackenzie and Mr. Smith, of Oshawa. Last fall certain parties approached the owners with a view to buying some of the trees. Mr. Conant was unable at the time to accompany the buyers to his property to examine the timber, and consequently only the trees on the other two hundred acres were obtainable. Two trees, 4½ feet at the butt, were sold for $400 each, and eleven trees at a price ranging from $80 to $120 each. The timber was hauled to the C.P.R. station and three flat cars were required to carry the two large trees. It was shipped to England, where it is to be used for ship masts. This accounts in part for the high price paid, as perfectly straight grained trees of sufficient length and suitable for masts are becoming very scarce. Our Canadian shipbuilding firms are paying as much as $100 per tree for similar purposes.

BAND SAW SHARPENING.

Finely sharpened teeth are essential to the best results in band saw cutting, and the comparative merits of emery wheels and files, together with the practical details pertaining to the operation of sharpening machines, are good subjects for consideration. An automatic sharpener is an indispensable machine for band saw work, but very much depends upon the construction and adjustment of the machine itself as to the quality of the work it performs. The rapid introduction of band and band resaw mills has called for the careful exercise of inventive genius in the perfection of band sharpeners, as well as for the exercise of the best mechanical skill and the use of the best material in their manufacture.

In a band saw sharpener it is essential that the machine be abundantly heavy and very rigid for handling all saws within its capacity; that the feed of the saw shall be positive and uniform; that the inclination and motion of the emery wheel shall be variable, to permit of any hook and any shape to the throat; that the boxes and slides shall be provided with efficient oiling devices, and kept free from dust; that the wear of the emery wheel shall be compensated by a faster speed motion, and that means be provided for withdrawing the emery dust from the machine.

A sharpener should be bolted firmly to the floor or to a substantial bench support, if it is of size for band resaws, that the machine may be free from vibration. The opinion is now general that the best method of carrying the saw to the machine is to support it upon adjustable post brackets, the machine being equipped with a front and back feed finger in preference to the method of supporting the saw on a set of adjustable pulleys, with single feed fingers.—Packages.

NEW ELECTRIC SAW MILL.

An extensive plant, including several buildings and a lumber dock, has been erected at St. John's, Oregon, by the Central Lumber Company, for use in connection with a new electric sawmill. The interesting feature of the equipment is the large machine upon which the sawing is accomplished. This consists of four saws, the largest one being driven perpendicularly by a 75-h.p. motor, and the other three horizontally by a 45-h.p. motor. All the saws and the motors are suspended on a steel frame, which moves backward and forward, while the log remains stationary. To bring the logs from the river a ball-bearing truck, operated by a 20-h.p. motor, and running on an incline, is used. Recently, in testing the machine, about 15,000 feet of lumber was sawn up, and, although the work was not executed quite as rapidly as was expected, it was nevertheless done in a most satisfactory manner. A high class of lumber was used, and it was cut very smoothly, there being none of the roughness noticeable in freshly sawn wood coming from the ordinary mill. It is believed that a greater speed will be acquired after the machine has been in operation longer. An attractive characteristic of the mill is that logs of almost any size may be handled, and there is very little waste. For instance, an immense log 7 ft. thick, which had proved too much for the larger ordinary sawmills, was cut with ease by this machine, and produced all told about 1,700 feet of board.

THE SYSTEMS OF ADMINISTRATION ON TIMBER LANDS IN CANADA.*

By AUBREY WHITE,
Deputy Commissioner of Crown Lands of Ontario.

Having been requested to read a paper at this meeting of the Forestry Association, I have chosen as my subject "The Systems of Administration of Timber Lands in Canada," a subject which lies within the scope of our studies and ought to be of importance to any society taking an interest in the preservation of our forest wealth.

I have not confined myself to the provincial systems only because my paper would not be complete without some reference to the Dominion laws and regulations, and I have strayed a little afield to notice the system prevailing in Newfoundland, which we hope soon to see included in the constellation of nations, if I may so put it, which form this great Dominion.

I suppose I might have contented myself with making a collection of the laws and regulations covered by my field of study, and have read them to you, leaving you to form your own opinions about their efficiency, but I have thought it would be more interesting, as well as instructive, if I were to take the most important of the systems and trace it from the seed up to the full grown tree with its numerous branches of regulations.

The most important system is that prevailing in Ontario and Quebec, and I bracket the systems of these two provinces together, because they have grown from the same germ, were under one management until the year 1867, the date of Confederation, and since then have differentiated very slightly. The seed of our system was sown in the period known as the "French Regime," when, in grants of Crown Lands to the Seigniors, the oak timber, and later on the pine, was reserved to the King, and did not pass with the soil. Some of the principles that govern free grants under our legislation of to-day are found in these grants, and as was to be expected, some of the difficulties which exist to-day were troublesome even in that early period. As to a typical grant, I take that made to Sieur de la Valliere by the Governor of Quebec in 1683. In it we find (1) that settlers are to be put on the land and that they must take possession, make improvements and keep house and home within two years, otherwise the location was to be forfeited, (2) the oak timber was to be reserved to the King and had to be protected, (3) the necessary roadways and passages had to remain open, and (4) the mines and minerals were reserved to the King. In our free grant system there is required (1) actual residence and improvements, (2) the pine timber is reserved to the King, (3) roads and streams are reserved, and (4) the mines and minerals are also reserved to the King. The reservation of the oak timber was not a dead letter. I have read one permit — familiar name — granted by the Governor in 1731, authorizing the holder to enter upon a Seigniory and cut and remove the timber required for building a vessel, which timber was to be brought to Quebec and there inspected and received, and a great deal of our square timber is to-day brought there to be inspected and received for shipment. Trespasses were provided against, and the regulations were drastic, which not only included confiscation of the timber, as in our day, but also forfeiture of the horses and plant engaged in taking out the stolen timber. The settlers' grievances were also present; we find that a settler having cut some oak trees in process of clearing and sold the logs cut from them, the Seignior immediately fined him. The settler appealed his case to the Governor, who in effect said: "How can he clear the land without cutting down the oak trees, why should he burn them if he can turn them into money? It is in the public interest that trees felled in the course of clearing should be sawn into boards and disposed of in order that the settler may obtain a little money to assist him in making his improvements rather than that he should be obliged to burn them on the land," and he further confounded the Seignior by calling his attention to the fact that the oak was reserved not to him but to the King. If the settler cut beyond the limits of his clearing, or failed to improve his location, any timber cut by him was held to be a trespass. Here are the very same regulations that prevail to-day under which the settler may cut and sell timber required to be removed in clearing his land and commits a trespass if he cuts beyond the limits of clearing or before he has become a bona fide settler. The right to take timber free of charge for public works, such as bridges, colonization roads, etc., was reserved in the grant to the Seignior, and the same reservation is found in our timber licenses to-day. After what I have said you will see why it is I go back to the French Regime for the beginning of things.

When the British took possession the Governor's attention was directed to the timber question. Pine, of course, was reserved to the King for naval purposes, but the Governor went a step further and issued instructions that areas containing quantities of pine were to be reserved absolutely, no settlers were to be allowed in them, and—wise precaution—no sawmills were to be erected anywhere near pine reserves, except by his express permission. Now you will note that down to the end of the year 1700, though the pine was reserved to the Crown, and pine areas were to be kept isolated, there is no mention of any authority being given to enter upon the Crown domain to take out timber for ordinary lumbering purposes, and here to dispose of the question of pine reservations, which by the way are now, over 100 years later, being made for the first time, it will be sufficient to say that none were made; the policy was proposed, but no life given to it. What was done was to insert a reservation of the white pine to the King in all patents issued.

We now come to a period when timber was cut for exportation from Canadian forests. The reservation of the pine, as already stated, was to be for naval purposes. Shortly after 1800 the attention of the contractors to the dockyards in England was called, perhaps by some wide awake Canadian, to this reservation, and perhaps it was said by some Canadian advocate of "Preferential Trade within the Empire": "Why do you not come to Canada and get some of your timber there instead of getting it all from the Baltic?" Be that as it may, the Naval contractors did apply to the Home Government for permission to cut masts, etc., in Canadian forests, and licenses—mark that word—were issued, one of which is now in my possession, dated 7th October, 1807, authorizing Messrs. Scott, Idles & Company to cut timber in the forests of Canada. This license was directed to the Surveyor General of Woods & Forests on the Continent of America—fancy that for a jurisdiction. Messrs. Scott, Idles & Company transferred their rights to Messrs. Muir & Jolliff, of Quebec. The Lieutenant-Governor-in-Council of Canada directed the Deputy Surveyor General of Woods for Canada to mark the trees that might be cut—quite a contract for him, was it not? No attempt seems to have been made to inspect this cutting, much less mark the trees, and the cutting was limited only by the ideas of the people who were operating under these licenses. Here we have the first issue of any form of authority, under British rule, to cut timber on the Crown lands, and the name of that authority, viz., license, has been continued ever since. This business of contractors for dock yards cutting by proxy was the genesis of our square timber trade; it centered in a few Quebec merchants, and these gentlemen were the precursors of those great firms which afterwards made Quebec famous as one of the principal timber markets of the world. It is to be noticed that the licenses did not cover any area. The holders of them went where they pleased, cut the best timber and paid nothing for it. The first of these licenses was issued in 1807 but it was not until 1826 that we find any attempt at regulation or supervision. Such a system as this created discontent, it being in the nature of a monopoly, and at last people began to take the law into their own hands, go into the forests and cut as they pleased without any authority.

To bring an end to the discontent, bring order out of chaos, and more important still to obtain some revenue from the timber cut, Sir Peregrine Maitland the Lieutenant-Governor, issued a proclamation on the 3rd May, 1826. Under this any person was at liberty to go into the forests, along the Ottawa and its tributaries, and cut as much timber as they wished subject to paying three cents per cubic foot for oak, two cents per cubic foot for red pine, one cent per cubic foot for white pine, and four cents each for sawlogs suitable for deals. If trees were cut that did not square eight inches, double these rates were exacted.

Under these regulations, bad as they were, we have the first attempt to collect revenue from Crown timber. Under this system disputes as to boundaries took place and there was no proper supervision of the cutting. The next year Mr. Peter Robinson was appointed Commissioner of Crown Lands and Surveyor General of Woods & Forests. He had authority to grant license over such territory as the Governor approved of. The licenses were to be limited as to quantities, 2,000 feet was all that could be cut under one. They were to be advertised in the York Gazette at an upset price and sold by public auction. Here is the first provision for an auction sale of Crown timber. The licenses ran for one year only, but timber had to be cut within nine months and the dues had to be paid within 15 months, and the timber was to be measured by a Government measurer. This system never took life—it died still-born. The regulations established by the proclamation of 1826 seems to have been continued in the Ottawa region at any rate and not much timber was cut elsewhere for export.

In 1840 the system was described to be as follows:—The person desiring to cut applied in the summer or autumn, stating quantity desired to be cut. A license was issued; the Licensee paid 25 per cent. of the dues on the quantity applied for in advance and entered into a bond to pay the balance when the timber came out. When the timber reached Bytown, the following season, it was measured and went on to Quebec. The parties applied for a license for only a small quantity so as to keep down the advance payment, but in practice they cut as much as they pleased. The dues were finally paid at Quebec on all the timber they took out.

We now come to the period of responsible government and the union of the provinces of Upper and Lower Canada which brought about a closer guardianship of the natural wealth of the country. The union took effect on the 10th February, 1841. A year later instructions were issued by the Hon. John Davidson, Commissioner of Crown Lands. They were intended to secure suppression of trespass and to introduce the principle of competition among lumbermen. These instructions are dated the 30th March, 1842. Under them licenses could be issued at the former rates. The licenses were to be for a fixed period, at the expiration of which they were to absolutely cease and determine. The former Licensee could get a new license for the same territory provided he came forward and applied before the 1st August. Provision was made for sale by public auction in cases where there were conflicting applications. No greater extent than ten miles was to be licensed to one person; 5,000 cubic feet of timber per mile had to be made annually.

On the 24th June, 1846, new regulations were made. Under these new limits must not exceed 5x5 miles; current licenses to be renewed for three seasons, after which they were to be curtailed to 5x5 miles, but existing Licensees might select the particular part of their limits they desired to keep. Licenses not applied for before the 15th August were to be put up for sale on the 1st September following, as well as any other berths for which more than one application had been received, and sold to the highest bidder. Here again we have the principle of a public sale, although one would say that 15 days was a very short period in which to make an examination. The quantity of timber to be taken out in each mile was reduced from 5,000 feet to 1,000 feet, and, after the 1st September, limits were to be granted to the first applicant complying with the conditions of sale. Parties applying for territory or unexplored limits were to furnish a sketch by a sworn Surveyor describing the territory and tieing it to some known point. If the sketch was afterwards found to be incorrect the license could be declared null and void. In order to induce the lumbermen to keep a close eye on one another, provision was made

* Paper read before the Canadian Forestry Association, Toronto, March 10, 1904.

that a forfeited limit was to be licensed to the party giving information as to the non-fulfillment of the conditions of the license, and failing the application of the informer, then to the next applicant. These instructions also specifically declared that licenses were not transferable and that any attempt to transfer them would entail forfeiture. Applicants had also to declare who were associated with them in the application.

Two months later, on the 14th August, 1846, other regulations were published. The only important change made by these regulations was that limit-holders might transfer their limits with the sanction of the Department of Crown Lands, a provision that has come down to our own time, and the quantity of timber to be cut each year per mile was reduced from 1,000 to 500 feet.

In 1849 a Select Committee of the House was appointed to consider the causes of depression in the lumber trade and suggest a remedy. This Committee made two reports in which they stated that the depression was caused by over-production, which was stimulated by the uncertain tenure of licenses and the threatened subdivision of the licenses already granted. Also that provisions requiring a certain quantity to be produced, without respect to the state of the markets, had a bad effect, and that the want of any decisive action by the department with respect to disputed boundaries was demoralizing. The uncertainty of the tenure and the disputed boundaries caused great trouble. Wealthy lumbermen who had the advantage of large numbers of men, would go in where they liked, without respect to others' rights, and rush out all the timber they could manage to cut in one season. As a remedy, positive right of the renewal of licenses was recommended so as to give certainty of tenure. Surveys of boundaries, and the imposition of ground rent for the areas covered by the license, was also suggested, and it was recommended that no distribution of areas should take place. It was further pointed out that under the regulations the practice with respect to the collection of dues was to ascertain the quantity by counting the number of sticks and averaging them without respect to size at a certain number of feet per stick, which average was too high in some cases and too low in others, and with respect to this the suggestion was made that dues should be paid on the actual contents of the timber ascertained by count and measurement.

The result of the report of this Committee was the passage of the "Crown Timber Act", which, with comparative little change, is to-day the law under which all the timber licenses are issued in the provinces of Ontario and Quebec. This Act provided that the Commissioner of Crown Lands might grant licenses for unoccupied territory, at such rates and subject to such conditions, regulations and restrictions as the Lieutenant-Governor might establish from time to time. No license was to be granted for a longer period than twelve months and all the licenses expired on the 30th April of each year. The territory licensed was to be described in each license. The Licensee was given absolute possession of the territory so that he could prosecute trespassers and seize timber cut by them. The making of sworn returns of the timber cut year by year was provided for, and there were many other provisions of less importance. The first regulations under this Act are dated 5th September, 1849. Agencies were established — agents might, on application, grant licenses, apparently without referring the applications to the Commissioner of Crown Lands. Sketches of the territory applied for had to be furnished. The area of timber limits was increased from 5 miles by 5 miles to 10 miles by 5 miles. Licenses were to be confined as far as possible to one side of the river. There was no restriction to the number of limits a man might hold. The timber was to be cut and paid for at certain rates. Transfers of limits were to be in writing and not valid until approved by the Commissioner of Crown Lands. It also provided that settlers or squatters cutting without authority, if they cut any timber except for building-fencing, clearing, etc., were to be treated as trespassers. These restrictions contained a distinct provision for renewal of licenses. The proper counting and measuring of timber cut was also provided for, and a clause was inserted in the regulations that actual settlers were not to be interferred with in the clearing of the land, etc. Here the settler first appears in the regulations. Under these regulations all a person had to do in order to obtain a limit was to make application to the Agent, furnish a sketch of the territory he desired to obtain and give security to pay the dues on the timber cut. There was no provision for competition except where adverse applications were received. Generally speaking, the principle of selling limits by public auction appears to have been entirely absent from the regulations.

In 1851 fresh regulations were promulgated. The new provisions provided—I call particular attention to this—that sawlogs cut on the public domain, if exported, paid double dues. Ground rent at the rate of fifty cents per mile was imposed. Here we have discrimination against the export of logs and the first imposition of ground rent. The ground rent was to be doubled each year that the limit was not worked. Vacant territory was to be granted to the first applicant provided he called and paid the ground rent, in the Bytown Agency within three months, elsewhere one month. If adverse applications were made for the same territory then the right to receive the license was decided by lot. Here we notice a gambling spirit in deciding the rights of individuals. Who would toss up for a limit to-day? There was also a provision to sell to the highest bidder in case of clashing of applications. Registers of the licenses issued were to be kept in the Agencies and the Crown Lands Department and were to be open for public inspection. Decisions of the Crown Timber Agents as to the disputed boundaries were to be final until reversed by arbitration. If one party failed to appoint his arbitrator then the Crown Timber Agent took the position. Should they not be able to agree on an umpire the Commissioner was to appoint one. Transfers of limits were allowed subject to the approval of the Commissioner of Crown Lands. Parties defying the regulations of the Department or the decision of the arbitrators were to be refused further licenses and their berths forfeited and disposed of. Security had to be given for the timber dues, etc.

In 1855 an Order-in-Council was passed dealing with the ground rent question, and fearing apparently that the imposition of ground rent might lead to the idea of the rights of ownership, in order to prevent any misunderstanding, this order-in-Council contained a declaration of great importance, to wit, that the changes made are not to imply that the Government cannot increase the ground rent or timber dues at any time in the future as the circumstances of the trade may render it expedient. Previous to the year 1857 no information could be obtained about the transactions of the Crown Lands Department except by special Return to the House, but on motion of Mr. A. T. Galt it was in the session of 1856 ordered that an Annual Report of the management of the Crown domain should be submitted to the Legislature each session. The first Report, and it was one of the bests reports that has ever been issued by the Department, was made for the year 1857.

In 1857 another change was made in the time for the payment of the ground rent; it was now to fall on the 30th April in each year, the day on which ground rent becomes payable under the present regulations. The cases of competition which came up under the regulations forced upon the attention of the Commissioner the principle of selling timber berths by public auction, for in the report of the Commissioner of Crown Lands for the year 1859 it is stated that wherever competition existed or could be excited, recourse had been had to the plan of disposing of the timber by public auction. Between the years 1856 and 1860, attention was sharply drawn to the practice of people purchasing under the pretense of settlement valuable timber lands, thus depriving the Crown of its revenue and the licensees of what they believed to be their property. Energetic steps were taken by the Department to stop this system of plundering. Numerous sales were cancelled when the lands were found to be valuable for the pine timber. Under the settlement regulations then prevailing, strange to say, the settler could burn whatever timber he cut in the course of clearing his land, but if he cut it into sawlogs and sold them he was guilty of trespass. The good sound position laid down by the Governor during the French Regime was departed from with disastrous results. The settlers were very much embittered and a deplorable state of matters came about. Some remedy had to be found, consequently new regulations were passed under which a class of license called a "Settler's License" was issued to settlers who erected a house 16x20, cleared five acres in every hundred and had been six months in residence. A fee of $4 was charged for these licenses. Timber dues were charged upon the timber cut and these dues were applied in payment of the purchase money of the land with a refund of any money collected in excess of the purchase money, less 10 per cent. for collection. Any person who is familiar with the history of lumbering and settlement in Canada during the period from 1856 to 1866 will know the bitter feelings that existed between the settler and the timber licensee, and how the Department was beset with criticism and difficulties in respect to clashing of interests and the providing of a remedy. Settler's licenses apparently did not meet the difficulty and the issue of them greatly fell off until they entirely disappeared.

In 1866 new Crown timber regulations were made. Sales by public auction were provided for. These sales were to be held on the 10th January and on the 10th July each year, or any other date that the Commissioner might fix. The limits were to be offered at an upset price of $4 per mile, the highest bidder to have the berth. If there was no bidding the berth was granted to any person paying the upset price. The Commissioner could sell between the dates of auction sales at $4 per mile to any person who applied for a berth. One berth only could be sold to each applicant. Timber licenses were to expire on the 30th April in each year. Ground rent was continued at 50 cents per mile. No licenses were to issue on a smaller computation than 8 square miles. The ground rent was to increase annually on berths not worked until it reached 23s. 4d. ($4.67) per mile. When occupation took place it reverted to the original rate of 50 cents per mile. 500 feet of timber or 20 sawlogs had to be made every year for each mile of the limit; renewals of licenses were provided for if the regulations and payments were complied with. Applications for renewal had to be made in writing every year before the 1st July. Transfers could not be made if dues were owing.

We have now come to the period of Confederation which was consummated on the 1st July, 1867. Since then each province has been free to manage its own affairs and enact such laws and regulations as would best carry out the policy suited to its circumstances. It is a great testimony to the wisdom of the Legislators of bygone years that the Crown Timber Act of 1849 has remained the charter, so to speak, of the timber licensing systems of Ontario and Quebec, very few amendments having been made to it in either province. The great strength of the Act is that it only lays down broad principles, leaving the management of the Crown domain to be carried out by regulations as experience teaches or emergency requires. It may be worth while to state the broad principles laid down. (1) The Commissioner of Crown Lands may issue licenses, which licenses are to cover all kinds of timber during their currency; (2) licenses are to run for one year only and then absolutely determine; (3) proper returns of the cutting of the timber are to be made; and (4) timber cut in trespass is liable to seizure and confiscation.

Since Confederation the act has been amended as follows: Timber on road allowances is declared to be covered by the timber license; lots which have been sold to actual settlers are to remain in license until proof of settlement duties is filed in the Department; the Commissioner of Crown Lands can sell those timbers on pulp concessions which are not covered by the concession and no pulp concessions can be granted for a longer period than 21 years, and most recent and most important, pine timber and spruce on lands under license must be manufactured in Canada. It will be seen that the points touched by the Act are not very numerous, but the field left for legislation is enormous—just listen to the language of the Act, "The Commissioner of Crown Lands may issue timber licenses subject to such rates and conditions, regulations and restrictions as may from time to time be established by the Lieutenant Governor in Council." No attempt is made to define what sort of conditions or restrictions may be imposed, anything that comes within the meaning of these words can be done by regulation. This discretion taken in combination with the absolute termination and legal death of every timber license

within one year of its birth, places almost unlimited power in the hands of the Crown. Take one example, when our good friends over the border undertook to treat us, as we thought, unfairly, and the Government of Canada could not act without making matters worse and perhaps ruining the lumber trade, we were able, by passing an Order-in-Council, to attach a condition to all licenses to the effect that timber cut on Crown lands must be manufactured in Canada, thereby transferring a goodly portion of the sawmill business of the State of Michigan to the Province of Ontario and leaving our friends who would not come over to Canada in the position of Lord Ullin when the waters wild went o'er his child. These regulations being very imporant, they were afterwards crystallized into an Act of the Legislature. Several Acts have been passed by the Legislature since Confederation amending the Crown Timber Act or affecting lumbering interests and I will just mention them. There is an Act affecting the rivers and streams which declares that everyone has the right to use these waterways for floating timber or logs; the Culler's Act which requires that persons desirous of culling logs cut under license shall pass an examination and be licensed by the Commissioner of Crown Lands; the Act for the preservation of the forest from destruction by fire, under authority of which fire rangers are put upon limits at the joint expense of the Government and the Licensee; the Act affecting liens of employees on sawlogs and timber; an Act amending the Free Grants Act, which reserves the pine timber on lands located after 5th March, 1880, and enables them to be continued in license; the Act for the driving of sawlogs and timber, which made some needed provisions with respect to parties who might be inclined to shirk their fair share of the expense and responsibility.

On the 28th May, 1869, the Crown Timber Regulations of 1866 were abrogated and new regulations were made by the Lieutenant-Governor-in-Council of the province of Ontario. To a great extent the old regulations were incorporated in the new; of course some new clauses were added at that time, and others have been added since. The most important clause in the new regulations was the requiring of survey, exploration and valuation of the timber limits before they were offered for sale. Then due advertisement of the sale, which was to be by public auction and to the highest bidder. Another important change was the increase of timber dues from 50 cents per thousand B. M. to 75 cents per thousand and of the ground rent from 50 cents per mile to $2 per mile. Another was the requiring of a more elaborate system of returns, with power to the Commissioner to have an inspection made of the books, records, etc., if fraud in returns were suspected.

In 1887 the regulations were again amended by increasing the timber dues from 75 cents per thousand to $1 per thousand and the ground rent from $2 per mile to $3 per mile.

In 1890 for the first time the sale held in that year by authority of Order-in-Council covered only the pine timber and the dues were again increased for the purposes of that sale to $1.25 per thousand.

In 1903, for the purposes of the timber sale held in that year, the dues were increased from $1 per thousand to $2 per thousand and on square timber from $20 to $50 per thousand feet cubic, and the ground rent from $3 to $5 per mile. Regulations affecting the last three sales were passed fixing a time limit beyond which licenses were not to be renewed of from 10 to 15 years. Regulations have also been made to the effect that lands located or sold are to pass automatically out of the timber license for anything but the pine timber on the day of sale. Regulations have also been passed that require Licensees to give sufficient timber for local sawmills upon being paid the fair value of the same. Regulations have also been made requiring that pine and spruce shall be manufactured in Canada, which of course have been crystallized into legislation, and more recently regulations have been passed requiring that hemlock bark shall be used in Canada.

Having traced the history of the license system, and given you the substance of the recent amendments to the Ontario laws and regalations, I shall now proceed to refer to the different laws and regulations prevailing in the Dominion and Newfoundland. I shall refer to these in a general way and briefly. It is only necessary to call your attention to the principles of the systems and to the wide divergencies of the laws and regulations. The licensing systems prevailing in Ontario and Quebec have as I have said a common origin and have run nearly along parallel lines.

The New Brunswick licensing system dates back to the 26th August, 1817, when the Lieutenant Governor in Council framed a set of rules with regard to timber license. One interesting provision in these early regulations was that licenses were to be giving only to British subjects. No dues appear to have been charged at that time.

Nova Scotia had no timber licensing system until quite recently and the British Columbia system is comparatively modern and is based somewhat on our system, differing very widely, however, in the matter of tenure and the rates of ground rent and dues. The Dominion system is also based largely on the Ontario system with such modifications as different circumstances have called for. I have not succeeded in tracing the Newfoundland system back to its origin.

In Ontario the Commissioner may issue licenses after sale by public auction, a reserve bid being fixed but not made public. The licenses are annual and terminate on the 30th April in each year, but by regulations are renewable. Ground rent runs from $3 to $5 per mile and is subject to increase or decrease. Dues on pine timber run from $1 to $2 per thousaud feet and are subject to increase or decrease. Pine logs, pulpwood and hemlock bark are required to be manufactured in Canada. Fire rangers are placed upon all licensed lands, one half of the expense being paid by the Licensee and the other half by the Government. These rangers are selected by the Licensees. $1 per mile is charged for transfer bonus on limits that are transferred.

In Quebec the Commissioner may issue licenses after sale by public auction. Limits have to be advertised for thirty days if of an extensive character, and small limits for fifteen days only. There is an upset price made public at the date of sale. The licenses terminate on the 30th April each year and are renewable by regulation. Ground rent is $3 per mile and is subject to increase or decrease. Dues on pine run from 80 cents to $1.30 per thousand, subject to increase or decrease. There is no restriction as to the exportation of logs except that pulpwood must pay 25 cents per cord additional if exported. Fire rangers are appointed by the Government upon the recommendation of the Licensees and a tax called a fire tax is charged upon the limit to pay the expenses of the fire ranging.

In New Brunswick the Commissioner may issue licenses. The mode of disposal is that applicants are required to petition for the limit they wish to obtain and to deposit in the Department $20 per mile. The limit is then advertised in the Royal Gazette for 14 days, after which it is put up at public auction and if the applicant is the highest bidder he gets the limit. If somebody else bids more he gets the limit and the applicant gets back his money. Limits are not to exceed 10 miles in area. The ground rent is $8 per mile and subject to increase. Dues on sawlogs are $1.25 per thousand, subject to increase. There does not appear to be any fire ranging system. The measurement of logs is made by Government cullers. There does not appear to be any restriction as to exportation.

In Nova Scotia there is no provision for sale by auction. The Governor in Council may issue leases to cut timber, which leases are to be for a period of 20 years, renewable for another 20 years if conditions are complied with. The price is to be 40 cents an acre—not annual—if timber below the diameter of 10 inches is not cut. If timber is cut below 10 inches down to 5 inches the price is 50 cents per acre. The only provision for public auction is where there are adverse applications for the same territory. If lands are not suitable for agricultural purposes they may be leased for pulp purposes as arrangements are made with the government.

In British Columbia limits may be sold by public tender and are to go to the highest bidder. Annual ground rent $160 per mile; dues 50 cents per thousand feet B.M. If a mill of certain capacity is erected on a limit the ground rent is reduced to $96 per mile. Dues are abated by one-half on lumber or timber that is exported from the province. The license or lease runs for a period of 21 years, and as this provision is statutory it is presumed that dues cannot be changed during that period. There is another class of licenses called "Special License," which cover only an area of 640 acres. These are issued at the discretion of the Commissioner, for a period not exceeding 5 years, and may be renewed at the discretion of the Commissioner. Annual ground rent on these licenses runs from $115 to $140. There is another system of licensing called "Hand Licenses," which are given without competition and it is presumed are intended to cover only small quantities. They run only for one year. Timber must be manufactured in the province. There is no provision for fire ranging on British Columbia lands.

In the Dominion of Canada lands may be put up for competition by tender and go to the highest bidder. Annual ground rent $5 per mile; west of Yale $32 per mile. Dues 50 cents per thousand. Licenses are annual and expire on the 30th April in each year and are subject to renewal. There is a fire ranging system on government lands paid for entirely by the Crown.

In Newfoundland there is no provision for public sale. Limits are granted by authority of Order-in-Council at a bonus price fixed by the Governor in Council, which varies according to the situation of the limit and not to be less than $2 per mile. In any case notice is to be given in the Gazette for one month. There is an annual ground rent of $2 per mile. Dues on timber are 50 cents per thousand in Newfoundland and in Labrador 25 cents per thousand feet B. M. Licenses may be granted for fifty years or such further period as may be deemed necessary. Licensees must erect a saw mill and work his limit; sawmill to be capable of cutting 1,000 feet every 24 hours. No person having a limit can buy logs from another Licensee or cut them by agreement on any other limit than his own. Pulp limits may be granted by the Lieutenant-Governor-in-Council; not more than 150 miles to any one individual or company. The license may run for 99 years or longer. There is a bonus of $5 per mile and ground rent of $2 per mile, and the timber is subject to 50 cents per thousand feet B. M. Pulp concessionaires have to expend $20,000 in plant. All kinds of timber, pulpwood, etc., must be manufactured in the colony.

"STANDARD" SAW SWAGES.

Manufacturers who use a cut-off or swing saw table will be interested in the lumber and labor-saving qualities of the Standard automatic saw gauge. The accompanying cut gives an idea of the operation of the gauge. The sawyer has any number of stops he wishes, on the graduated rod. They are easily adjusted to any stock length he wants.

Manufacturers who have equipped their saw tables with these machines are so well pleased by the results obtained that they have put them on every saw table in their factories.

The Standard automatic saw gauge is made by the Specialty Manufacturing Company, of Grand Rapids, Mich. Any correspondence addressed to their office at 24 Canal Street, mentioning the CANADA LUMBERMAN, will be promptly attended to, and we believe that their trial offer will interest you.

FOREST MANAGEMENT IN ONTARIO.*

By John Bertram.

The most important feature within recent years of forest management in Ontario has been the setting apart of certain areas of suitable territory as "Forest Reserves."

The first, though not spoken of strictly as a forest reserve, was created in 1893 as the Algonquin Park, with an area of 1,109,383 acres, situated on the height of land between the Ottawa river and its tributaries and the Georgian Bay waters. Then followed under the Forest Reserve Act in 1899 the Eastern Forest Reserve, being part of Townships north of the city of Kingston, containing about 80,000 acres of land that had been lumbered over and afterwards burned, but now carrying a heavy crop of young pine. In 1900 by Order-in-Council the Sibley Reserve was set apart, being a portion of the Township of Sibley and including Thunder Cape, 45,000 acres more or less. On January 11th, 1901, there was created the Temagami Reserve, comprising 1,408,000 acres, within which is the beautiful lake of the same name. Most of the territory in this reserve is still covered with virgin pine and is of great value. An extension to this reserve west and north was made on the 16th December, 1903, adding 2,368,000 acres, so that now the area of the Temagami Reserve is 3,776,000 acres. The total area so set apart in the Province of Ontario being 5,010,383 acres.

Nothing but words of commendation can be used in speaking of the wise and far-sighted policy of the Ontario Government in having inaugurated this policy, and it should be followed up by a still greater extension of the system, as fast as exact information is acquired by the Bureau of Forestry.

There is still a very large area of country extending to the west and north from the last named reserve, along both sides of the watershed between the Georgian Bay and James Bay waters, quite unfit, in a general way, for grain growing, but well suited for the growth of conifers, by which it is at present largely covered. The land is in possession of the Provincial Government and only a small portion of it is under license. Within the area stands a large proportion of the white and red pine not yet sold, and how to deal with this remnant of what was once a mighty forest in Ontario is the pressing question. It would be quite superfluous to offer an argument before the Dominion Forestry Association about the value of white pine, or the necessity of strictly caring for its future growth in all localities where it at present exists; the extension, therefore, of the present reserves to cover the pine bearing territory north and south of the watershed is self evident. The height of land runs in an uneven line in a westerly direction from the sources of the Montreal River to the source of the Mississaga River, which flows to the Georgian Bay, and within this area, north and south of the line, is the as yet unsold pine. The general character of this great territory makes it far more valuable for a forest reserve than it can ever be for agricultural purposes, and there should be no hesitation in placing it in the proper place. The policy pursued by the Department of Crown Lands in selling only the white and red pine on licensed lands is open to question. It is very desirable that on all berths the growth of pine, as the most valuable wood, should be facilitated and encouraged; this can hardly be done by cutting down all the merchantable pine and leaving its place to be taken up by balsam, hemlock, spruce or any other wood covering the ground. Good forestry requires that the merchantable trees of these varieties should also be cut down to allow the seed of the pine to germinate, which it will not do under the close shade of other trees. Hitherto it would not pay lumbermen in many places to cut either hemlock, spruce or balsam, but now that the price has increased they should be cut down and not allowed to usurp the place of more valuable timber; and the same may be said of localities where hardwood predominates. If the pine is cut down and the crown of the forest left intact, then pine will not come up again under its shade, or if it does, will be under stunted conditions.

Looking, therefore, to the re-growth of pine a different policy will have to be devised than what amounts to extermination of the pine and the encouragement of the growth of inferior and less valuable varieties. It is manifest that if the red and white pine only on a berth are sold and the term of fifteen years retained, when the berth at the end of the time comes back into the hands of the government it will be covered only by inferior varieties growing with accelerated speed, having been freed from the overshadowing influence of the pine. No special formula of treatment can be given, as each berth will present a different problem, but any intelligent forester can work towards the desired end and it is for the Department to see that in their selling policy this is kept steadily in mind.

There is another view with reference to forest reserves that although occasionally spoken of has not been seriously discussed, that is, the desirability of extending the reserves to land now under license to lumbermen. The preservation of young growing pine is attracting year by year more of the thoughtful lumberman's attention; the old notion of pine not succeeding pine is passing away, and a keen sense of the value of young pine trees coming up again after the original forest has been cut down, is now prevalent. There can be no question of selling land to settlers that is fit for cultivation; but because a license has been sold covering the district which is more fit for forest growth than farming is an additional reason why it should be retained for that purpose, and placed in the forest reserve permanently. No question can then come up between the lumbermen and the settler which hitherto has led to so much bad feeling. Any lands so reserved can remain in the hands of the licensee subject to any reasonable change in the regulations the Department may deem it wise to impose. Good judgement and a close examination of the districts would be necessary together with a general policy governing large areas. A patch of reserve here and there taken out of licensed lands is not what is thought of, but when the general character of a district is found suitable then this phase of forest management may come up for consideration.

Speaking of reservations so far, it has been looking to the propogation of white and red pine, but there is another question of great interest to the province. The height of land between Georgian Bay and the great Northern Basin, and which is the back-bone of Ontario, extends from the sources of the rivers running into Georgian Bay and Lake Huron around the north end of Lake Nepigon and westward; the prevailing timber being spruce. This region has been ravaged by fire from time to time, the prevailing timber is small, the land utterly unfit for cultivation, and it has been looked upon as a wilderness, under no kind of surveillance, and liable to be set on fire by any wandering intruder. Is it not time that this vast territory should be brought under an efficient system of fire protection? Let alone, it will only go from bad to worse and probably, in time, from recurring fires, become a veritable wilderness. There is at present supposed to be a large quantity of merchantable timber and pulpwood growing on it, and pending the question of making it a vast forest reserve, which does not require an immediate decision, it would surely be in the interests of the province to find out what timber is on it and to take immediate steps to have it brought under the system of provincial fire protection.

The only other question to be touched on in this paper is one that is dimly in the minds of many people in this province and probably also in other provinces; and that is what should be done with a very considerable area of land in the Dominion suitable for both farming and forestry, of which the district of Muskoka may be taken as a type. Muskoka is a beautiful and healthy country with a bracing and invigorating climate, mostly hilly, with innumerable streams and lakes of clear water abounding with fish and game, an excellent example of the features of the country found within the Laurentian range, the hills, as a rule, not rising more than a few hundred feet and covered with trees. Between thirty and forty years back, while large lumbering operations were being carried on, this district was opened to settlers, and while it cannot be denied that many of them have done well, still a number of abandoned farms can be seen by anyone driving through the district, and many settlers while remaining there and being averse to giving up their holdings are fighting an uphill battle on account of the character of the soil on which they are located. The district being of Laurentian rock has all the characteristics of the formation; the rock having been subject to attrition for untold ages, has given a constitution to the soil very different from the limestone series or from the ordinary alluvial deposits. In many circumscribed spots of greater or less extent as good soil can be found as anywhere, but they are limited in extent, the general character of the country being better fitted for tree growth than for agriculture. The good soil is splendidly adapted for the growth of clover and timothy, potatoes and roots of all kinds; the grass will produce the very best cheese and butter, the milk being rich and delicious.

It is manifest that a country of this kind, which has a population of thrifty farmers, cannot be depopulated even if it could be shown that better financial results would accrue to the holder if it were all kept under forest; the conditions point rather to mixed holdings of greater extent than at present prevail. Instead of trying to make a living as a farmer only, the proprietor should be encouraged to acquire larger acreage and become a forester as well as a farmer. An ideal condition for the district would be for the proprietor to own say 1000 or 1200 acres; cultivate the really good part wherever found within his boundaries and keep the rest of it in forest. A knowledge of forestry could be acquired by reading, or it could be imparted by professors or students giving lectures and lessons on best methods. What a wonderful change would be brought about in the productiveness of the forest if this were carried out. Trees could be planted where needed, poor varieties cut out, thick patches thinned, and the product utilized in many ways, merchantable logs or trees sold from time to time, and the whole forest looked upon as the most valuable crop the nature of the soil could produce. Authentic statistics can be obtained, particularly in Germany, of the net value of forest product extending over long periods. The writer will give an instance which came under his own observation in 1902 when visiting Scotland. A patch of spruce forest containing eleven acres had just been cut down and sold en bloc to the owner of a portable saw mill. The timber was fifty years old, and so from the amount received the proceeds were easily calculated, and it was found, taking the opinion of the agent of the estate as to the rental value of that particular land, that the timber had given three times as much rent per annum than if the land had been rented for agricultural purposes. Of course it was not good land for cropping, but well suited for young spruce as an examination of the yearly growth fully testified and by which the age of the trees was tested.

The occupation of the forester and farmer would appeal to many people and with personal care and attention would become a profitable pursuit, pleasant and agreeable, away from the hurly burly of city life. Personal attention to this style of forest would give a much larger growth of feet per acre than in a forest reserve which could not possibly receive the same care. In a minor degree there are many farmers in old settlements who would find it more profitable to devote a part of their farms to tree growth. All uneven or hilly land should be planted, the main business being farming and tree growth secondary, just as in the northern districts sylviculture should be the main business and farming subsidiary. There is another feature of forest management in townships partly settled which should be considered. Very often abandoned farms are sold or offered for sale by the Municipality for taxes and also denuded lands on which there is no clearing. It would be well to give the township power to acquire these lands and hold them as a Municipal property; in time they would become valuable and a source of income. Let them be held as township forest reserves, and to show how the idea is growing of the value of young trees, Mr. Thos. Southworth, of the Forestry Bureau, has had application already for some townships seeking to acquire this very power; give it to them by all means, it would help to increase the value of all timbered lands and give a new view of the worth of our rocky back country and help transform what is in many cases looked upon as a worthless wilderness into one of the most beautiful of all nature's scenes, a country covered with forest.

The incidental but very real value of keeping a considerable area in every district under forest cover has not been touched upon, as it does not come within the scope of this paper.

* Paper read before the Canadian Forestry Association, Toronto, March 10th, 1904.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company
of Toronto, Limited,
CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance, $1.00
One Copy, Weekly and Monthly, Six Months, in advance, 50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber, wood-working and allied industries, being the only representative in Canada of these important interests. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Especial pains are taken to secure for publication in the WEEKLY LUMBERMAN the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations. Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, wood-working factories, pulp mills, etc., the CANADA LUMBERMAN is undoubtedly the cheapest and most profitable advertising medium. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which are inserted in a conspicuous position on front page of the Weekly Edition.

LUMBERING AND FORESTRY.

Much space in this number is given to a report of the proceedings of the Canadian Forestry Association meeting in Toronto, a perusal of which will repay any of our readers. The paper by Mr. White is a splendid resume of the Crown timber regulations and should be preserved for reference by all lumbermen; Mr. Bertram's paper is a valuable addition to forestry literature.

Time has brought about remarkable changes in the management and manipulation of the forests. A few years ago the hewers of timber in this country gave no thought whatever to future growth; to-day forestry and lumbering go hand in hand. The owners of timber land recognize as never before the wisdom and necessity of protecting and assisting the growth of young trees. Old ideas are being discarded, and new methods adopted conforming with the requirements as dictated by a closer and more intelligent study of the conditions. And how erroneous were some of the earlier theories. For instance, it was supposed that, when the land was cut over, the white pine was invariably succeeded by a crop of inferior trees, but the dense growths of young pine now to be found on cut-over lands prove the fallacy of this theory.

The advice of the modern forester to the lumberman is to be conservative in his operations. The day for striving to rid the land of its timber as quickly as possible has gone by. The perpetuation of the lumber industry demands that more consideration be given forest preservation, and the application of methods to that end will result in greater returns to the owner of the land than has generally been supposed. The ideal method is to cut each year only the equivalent to the growth of the timber. This plan, we are glad to know, is now being carried out by Mr. John Bertram, of the Collins Inlet Lumber Company, whose operations stand as a worthy example to other lumbermen. Mr. Bertram cuts only the accretion of the timber, and, to use his own words, expects to be able to continue lumbering indefinitely so far as his timber supply is concerned.

Little is yet known in this country from actual experience regarding the rapidity of forest growth, but the obserations of a few men who may be termed leaders in the science of forestry furnish a basis on which calculations may be made with some degree of accuracy. Opinions of such experts are crystallized in the report of the Ontario Forestry Commission. Here it is stated that a young tree which would cut only one log 8 inches in diameter and 16 feet board measure would, if allowed to stand for thirty years, grow in diameter at the rate of one inch in five years (in some cases the growth is as rapid as one inch in two years), and hence would give a butt log of 14 inches diameter, 16 feet long, or 100 feet of lumber, board measure. In addition to this, however, the tree would have grown sufficient in height to give two more logs, one say of 11 inches and one of 8 inches diameter, both 16 feet long, measuring respectively 49 feet and 16 feet board measure, or a total for the tree of 164 feet board measure. Thus a tree which would require forty years to produce 16 feet board measure of merchantable timber, would, in the thirty following years, have increased to 164 feet board measure. This is considered the period of greatest relative growth. After attaining a diameter sufficient to make a 14 inch butt log, it is estimated that the tree would continue to gain at the rate of 3½ per cent. per annum. These calculations show the necessity of protecting the young growth of pine, and are recommended to the consideration of lumbermen and others in the possession of land not suited for agricultural purposes.

THE REFUSE OF SAW-MILLS.

Notwithstanding the modern methods and improved machinery which are now employed in the manufacture of timber, there is still a vast amount of refuse around saw mills which is simply wasted, and in many cases an expense is involved in getting rid of it. Too much emphasis cannot be placed on the necessity of utilizing this refuse in some manner whenever it is at all possible to do so. The location of a mill determines very largely whether the refuse can be profitably disposed of or whether it must be destroyed in the cheapest possible manner. A certain manufacturer of lumber on the Georgian Bay has carefully considered the question of utilizing the edgings and other small stuff around his mill, and with almost incredible results. He claims that the revenue derived from the sale of such material now covers the cost of operating his mill. In this case the situation is favorable and it is doubtful whether many other mills could accomplish as good results in this direction. Another manufacturer we have in mind determined to endeavor to utilize what had previously been waste material, but it was found that the cost of labor, which was the chief item of expense, was greater than the returns from the sale of the material. The extent to which the waste product of a saw mill can be utilized is limited to the point at which there is a margin of profit accruing from the operation. There is, however, a large quantity of material which is burned or otherwise destroyed which might in many cases be profitably utilized, and the best method of doing this is a question to which millmen cannot give too much consideration.

EDITORIAL NOTES.

A correspondent has called our attention to the difficulty of obtaining suitable shingle bands in this country. He states that in British Columbia tin bands have been made around the canneries in order to use up their scrap material, and that one or two firms in the east are making bands out of their scrap, but they do not produce a rolled band, which is claimed to be the only satisfactory article. With other kinds there is said to be more or less breaking of bunches of shingles, which means loss of money and trade. Our correspondent argues that the present duty of 30 per cent. should be reduced or abolished entirely, on the ground that it would be of great benefit to Canadian mill men, whereas little injury would be done to home manufacturers, inasmuch as even in the face of the 30 per cent. duty a large proportion of the shingle bands used are imported from the United States. It is not probable that the Dominion Government could at the present time be induced to make any alteration in the tariff. This being the case, there would seem to be an opening in this country for some enterprising manufacturer who would turn out shingle bands equal in every respect to those to be obtained from the United States.

Realizing the increasing scarcity of timber and the probability of a more economical use of forest land, the Weyerhæuser Timber Company has signed an agreement with the Bureau of Forestry of the United States by which the Bureau agrees to prepare working plans for the conservative management of about 1,300,000 acres of the company's timber lands in Washington. The Northern Pacific Railway Company has also requested the Bureau of Forestry to prepare working plans for its timber land holdings in Washington and Idaho. The timber lands of these companies are the most extensive privately owned tracts for which the Bureau has yet been asked to prepare working plans. The task of putting these lands under careful management will be of great magnitude, but the companies believe that the importance and value of the work thus accomplished will far outweigh the labor and expense involved. It is understood that the companies bear the expenses for travelling and subsistence of the persons engaged in the work, but that the salaries of those so engaged will be borne by the Department of Agriculture. The Department reserves the right to publish and distribute the plan and its results for the information of lumbermen, forest owners and others whom it may concern. Last summer a party of foresters made a study of the Norway pine on the Weyerhæuser Company's lands near Cloquet, Minn., and a working plan for these lands is now in preparation. The above facts suggest that the time is not far distant when the lumbermen of Canada may seek the aid of expert foresters in the management of their timber lands.

WESTERN RETAIL LUMBERMEN'S ASSOCIATION

Thirteenth Annual Meeting in Winnipeg.—Freight Rates Discussed.—Mutual Fire Insurance System Desired.

The thirteenth annual meeting of the Western Retail Lumbermen's Association was held in Winnipeg on Wednesday, March 23, and was continued in the morning and afternoon of the following day. The Association includes in its membership nearly all the retail lumber dealers in Manitoba and the Territories, or we may say from Lake of the Woods to the Rocky

Mr. J. L. Campbell, Melita,
President Western Retail Lumbermen's Association.

Mountains. Manufacturers and wholesalers are admitted to membership as honorary members, with the privilege of speaking and voting at the meetings. A large number of active members were present from all sections of this vast territory, but comparatively few honorary members. Those who registered were :

Jas. A. Badgley, Emerson ; W. H. Duncan, Regina ; J. A. Thompson, Arcola ; W. H. Clark, Edmonton ; Thos. Gibson, Portage la Prairie ; A. M. Stewart, Thornhill ; W. W. Ireland, Carberry ; H. McRae, Plum Coulee ; J. Hanbury, Brandon ; W. A. Murkill, Dominion City ; A. A. Batard, Morris ; T. R. Preston, Elen Ewen; A. Z. Brown, Saskatoon; Mr. Craig, Strathclair ; H. E. Meilieke, Dundurn ; C. Meilieke, Hanley ; J. E. Walker, Rocanville ; Jas. A. Ovas, Winnipeg ; John R. Bunn, Milestone ; B. C. Sharpe, Moose Jaw ; R. Kinney, Gladstone ; James Conn, Indian Head ; A. W. Sherwood, Indian Head; J. D. Kenney, Brandon ; W. C. Thorburn, Broadview ; R. Lockhart, Fort Frances ; J. H. Vanwart, Calgary ; E. R. J. Forster, Crow's Nest ; B. Harvey, Qu'Appelle ; Chas. Willoughby, Regina; J. C. Parrott, Saltscoats; A. D. H. Renuart, St. Pierre ; Wm. Scott, Port Arthur ; D. J. McDonald, Port Arthur ; Peter Selmeary, Altona ; G. A. Shaughnessy, Savanne, Ont. ; M. McManus, Winnipeg ; J. E. Hedderl y, Dauphin ; Chas. Bantry, Dauphin ; D. Sinclair, Winnipeg ; Jas. B. Dupos, St. Jean ; R. J. Friesen, Gretna ; W. F. Ramsay, Killarney ; H. S. Springate, Winnipeg ; S. G. Marling, Pense ; Jos. W. Ross, Whitemouth ; B. Harvey, Qu'Appelle ; D. Ross, Whitemouth ; E. A. Burbank, Solsgirth ; Jos. Conway, Crystal City ; A. Dunlop, Dunrea ; A. Serkan, Niverville ; Geo. Holland, Starbuck ; G. W. High, Killarney ; S. Fargey, Belmont ; W. J. Robertson, Cartwright ; Wesley Howard, Mather ; A. N. Shaw, Miami ; G. E. Davidson, Manitou ; A. A. Hunt, J. Orbfield, A. G. Gould, L. D. Smith, T. A. Cuddy.

The meeting was called to order on Wednesday afternoon by Vice-President A. M. Stewart, of Thornhill and Morden, who occupied the chair. A telegram was read from President J. L. Campbell, of Melita, stating that owing to recent serious illness his physician had forbidden him from attempting the trip to Winnipeg, in the face of the storm prevailing. Telegrams were also received from other members, including some of the directors, who were unable to reach the city in consequence of the snow blockade on some of the branch railway lines. Much sympathy was expressed for the president, who is an exceedingly popular member, on account of his recent severe illness.

The first business taken up after reading of minutes was the presentation of reports of officers. Secretary Isaac Cockburn read the report of the president, which had been forwarded by mail. After reviewing the work and scope of the Association, the address concluded as follows :

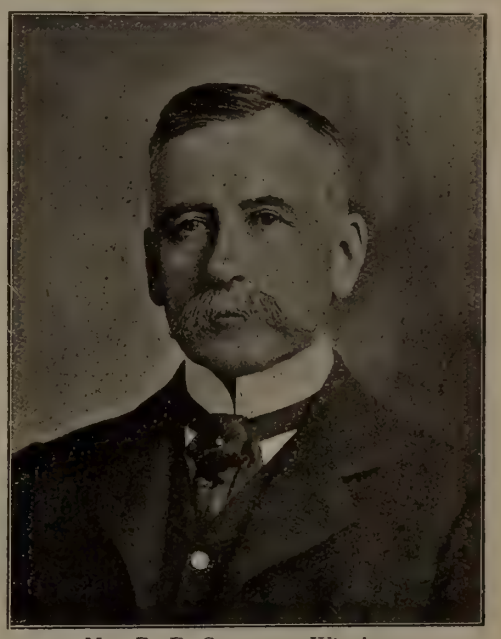
PRESIDENT'S ADDRESS.

It was never the intention of the promoters of this association to found a combine or monopoly. The objects in view were to improve the business and financial standing of the retail dealer, to enable him to give the public a better service, to insure him a fair and reasonable return for his labour and capital, to enable him to live and meet his obligations without unduly enhancing the cost of lumber to the consumer. Surely, these are laudable objects. That the founders have not been altogether dissappointed we have only to look at the results. Where will you find larger, better and more varied stock in better condition than in the retail yards of this country? What class of business men gives so large a measure of financial accommodation to its customers? Surely, these are very great and substantial advantages, especially in a country such as this where the settler for the most part is so largely dependent upon the generous treatment of the business man. And this favorable condition of the trade has been brought about without unduly enhancing the price to the consumer. I submit without fear of successful contradiction that no other similar business man in this country has so small a percentage of profit on his goods as the retail lumberman. I am perfectly satisfied that were the whole question of gains and losses submitted to a committee of disinterested business men, not only would this contention be sustained, but also it would be found that the percentage of profit is not higher than that obtained before this association was called into existence. True, lumber has advanced in price during the last few years; so have land and wheat and horses. In lumber, as in these, the price is fixed by the immutable law of supply and demand. At no time in the history of this country has the demand for building material been so great as in recent years. This great demand could only be met by increased energy and consequent increased cost of production. These conditions and these alone are responsible for the increase in price. Notwithstanding this, I think it better to have met the demand, even at greater cost, than not to have met it at all.

It is true that men connected with our association have used their best endeavours, vainly, I am glad to say, to make it a machine for the establishment of a combine or monopoly. Their propositions were vigorously and successfully opposed by men of loftier minds, who saw iniquity in the attempt and danger to the well-being of our association. Foiled in their designs they sought revenge by trying to ruin through calumny what they could not destroy through bad counsel. These men succeeded in loud voiced acclaims in agitating the public mind. Their utterances were so extravagant, so exaggerated, so wide of the facts, that had they not mentioned this association by name, we would have been forced to the conclusion that they did not mean us at all."

SECRERARY'S REPORT.

Secretary Cockburn in his annual report, noted the prosperity evidenced by the finances of the association, which now has a yard membership of 498. The honorary membership stands at 90. These figures show an increase of 155 active and 27 honorary members during 1903. General harmony prevailed among the members although there had been a small percentage out of harmony for unduly cutting prices. Continuing he said: "It is well known that our by-laws do not permit of more than a charge of 20 per cent. over the wholesale cost to be the price, and I have no knowledge of any price list exceeding that as a



Mr. D. E. Sprague, Winnipeg,
Vice-President Western Retail Lumbermen's Association.

cash basis, and I do know of price lists which are at less than that on that basis. It has been alleged that an exorbitant price has been charged in some instances by isolated members, but I have striven without success to discover any such case. However, this may have possibly occurred, and with the considerable membership we have there may be some one individual member disposed to take an undue advantage of the unthinking, but it does not follow from the rules in the by-laws of the association that any one member is privileged or can debar another member from selling lumber on a basis of 20 per cent. over the wholesale cost at any one point. I should much regret to find than any member would be dishonorable enough to overcharge his customer when

opportunity offers itself. In the various business spheres there have been found persons who would turn aside from probity and fair dealing to take undue advantage in the matter of gain when afforded opportunity. You can rest assured that were I to receive evidence of a transaction of that nature I would speedily bring it before the directors and expulsion would follow. It is scarcely fair to circulate statements of that nature and withhold information as to the culpable party.

In the interests of the advancement and development of the country the Canadian Pacific Railway Co. have made a deliverance on the necessity of cheap lumber to be provided for the intending settler. With this we are in accord with them and are most desirous that it may be made possible, and with this purpose I would most respectively suggest that the railway company take into their serious consideration the great part devolving upon them in bringing about a reduction in the cost of lumber to the consumer, and not necessarily by their embarking into the lumber business either as manufacturers or otherwise, but instituting a more liberal and reasonable lumber tariff.

Sir Thomas Shaughnessy recently in delivering an address at the Canadian Club in Toronto, spoke as follows: "Transportation was the greatest question of every community. In this country, many portions of which are unpopulated, transportation becomes of paramount importance. Nothing exercises so important an influence upon the progress and at times upon the destiny of a country as the transportation system."

Mr. Whyte having already given emphasis to the importance of cheap lumber in the encouragment of the settlement and development of the country should not now be slow to remedy the existing responsibility of the C.P.R. Co. for the stupendous lumber tariff in force by causing at once to be made a revision of the same with a general overhauling and cutting down process and lowering of the tariff rates upon lumber. With this being done great will be the blessing and relief to the lumber dealer, the settler and the country at large, otherwise most assuredly so long as the C.P.R. continues the dominant railway for the carriage of lumber in the western country the lumber must be high in cost, excepting in districts where the railway haulage is short indeed.

I have been glancing over the lumber tariff somewhat, but before referring to it I would first direct your attention to the bald statement of a newspaper of Vancouver announcing that the C.P.R. had reduced the tariff rate on lumber $2.50 per thousand feet. Of course this was something pleasing to send forth to the public, but I am sorry to say misleading in the extreme, and you will be surprised how little change really did take place in the way of reduction. Hitherto the shipments from the coast were subject to a tariff of 40c. per 100 lbs. upon fir lumber, and upon cedar and other lumber 50c. per 100 lbs. The tariff has now changed upon cedar and other lumber to 40c. per 100 lbs., upon dimension and the lower grades up to that of ship-lap, being the same rate as that of fir, but upon grades of cedar and other lumber better than ship-lap grade the former rate of 50c. per 100 lbs. continues in force. The coast manufacturers have issued a circular to the retail dealers intimating that they have decided to reduce ship-lap and common grades of lumber $1.00 per thousand feet, the better grades remaining at former prices, and the freight tariff, I am informed, remained just what it was on the better grade of lumber. It is not necessary for me to state to you that the quality of lumber that has been reduced in price comes in competition with the dimension and ship-lap of the mountain, the pine and spruce lumber, and which being of less haulage have been mostly sought after by the dealers. I have been told that the mountain manufacturers are reducing their lumber to the extent of $1.00 per thousand feet in the hope that the C. P.R. will reduce the tariff upon that lumber to the extent of 50c. or 60c. per thousand feet. This will show you how dissappointed has been the looked for reduction on the cost of lumber and that the C.P.R. have given away very little, and that apparently very reluctantly. The freight charge is high, and necessarily is made high to the dealer, when a freight of $8.00 or $10.00 per thousand has to be added to the mill price at place of shipment.

Then again there appears to be an apparent unfair and unjust discrepancy existing in a tariff upon lumber pertaining to several branch lines upon a haulage of similar miles on the main line 7c. per 100 lbs. more than to Otterbourne, having a similar mileage. This extra charge on dressed lumber is $1.40 and undressed lumber $2.10 per thousand feet. Kehoe, 123 miles from Portage la Prairie, the extra charge is 8½c. per 100 lbs. more than to Emerson, a similar mileage, being extra per thousand feet dressed lumber $1.70, and undressed lumber, $2.55. Macdonald, 10 miles from Portage la Prairie, extra tariff 3c. per 100 lbs., more than to Poplar Point, which is 16 miles from Portage la Prairie, extra cost per thousand feet 60c. upon dressed lumber, 90c. per thousand on rough lumber. Rapid City from Brandon, 33 miles, tariff 4½c. more than to Melbourne, 35 miles, being extra cost per thousand feet, 90c. on dressed lumber and $1.35 for undressed. Miniota on the Miniota branch, 77 miles from Brandon, extra cost 6c. more than to Portage la Prairie similar mileage, extra per thousand feet, dressed lumber $1.20, and undressed, $1.80.

The Kirkella branch is much higher per mileage than upon the Miniota branch, a car from a point on the Canadian Northern Railway to Rocanville on that line the freight charges amount to equal to $8.00 per thousand feet having a mileage on the Canadian Northern Railway of 172 on spruce lumber shipped over the Canadian miles with a 10c. rate and a mileage of 147 miles on the C.P.R. with a 14c. rate. Then a car shipped to a point on the Kirkella branch from British Columbia costing at the mill $154.97 and the railway freight on the same $261, totalling $415.97, showing the nett manufacturer to receive 32.45 per cent., Railway Co. 54.66 per cent., retail dealer 12.89 per cent. The following is a memo showing the disproportionate charges of the C. P. R. Northern Railway and that of the C.P.R. being shipped to points on the Canadian Pacific Railway:

	C.N.R.		C.P.R.		Total
Shipped to—	Miles.	Rate.	Miles.	Rate.	Miles.
Rapid City	136	8	59	9	195
Oak River	136	8	74	10	210
Miniota	136	8	103	12	239
Minnedosa	136	8	44	7	180
Newdale	136	8	62	9	198
Foxwarren	136	8	110	12	245
Langenburg	136	8	145	14	281
Yorkton	136	8	188	15	324
Austin	173	10	28	6	201
Carberry	173	10	49	8	222
Kirkella	173	10	147	14	320

Taking the comparative charges of the above on a basis of 100 miles for each line of railway, the Canadian Northern Railway will be found to have charged a rate of $5.85 per 100 lbs. on 100 miles while the C.P.R. Co. charge 11 1-2c. per 100 lbs. on 100 miles, or being a higher charge of 96 1-2 per cent. over that of the Canadian Northern or equal per thousand feet by the Canadian Northern $1.17, and that of the C.P.R. $2.30 per thousand feet, or an excess charge of the C.P.R. Co. for the same mileage of $1.13 per thousand feet or 96 1-2 per cent. greater.

A car of lath shipped from Ladysmith to Calgary the manufacturer received therefor $44.55; the railway company for freight $182.45, making $227,00; the cost to consumer, $243; for this the manufacturer gets 18.04 per cent.; railway company 75.12 per cent., retail dealer 6.54 per cent.

Car, Vancouver to Regina, three cars 64,533 feet.—

Manufacturer gets at mill	$692.37
Railway gets	695.00
Dealer	206.59
Sold to consumer at	$1,593.96
Manufacturer gets	43.44 per cent.
Railway gets	43.62 per cent.
Dealer	12.94 per cent.

733,780 feet sold at Innisfail.—

Railway charge for freight	19.06 per cent.
Retail dealer	13.10 per cent.

One car from Vancouver to Dundurn.—

Cost at mill	$158.84
Railway charge for freight	212.49
Retail dealer	87.93
Cartage	9.76
Cost to consumer	$2,468.93
Manufacturer gets	33.90
Railway freight	35.44
Retail dealer	18.70

Two cars to Moosomin, railway gets on cost to consumer, 33.17 per cent.; dealer 17.33 per cent.

On four cars, Vancouver to Morris, railway gets on cost to consumer 41.02 per cent.; retail dealer gets 14.78 per cent.

In addition to the above, I have procured from a number of dealers along the main line of the Canadian Pacific Railway and the Pembina, Minnedosa and Yorkton, Prince Albert and Edmonton branches, a statement of the cost of lumber from Vancouver and the mountains, covering about twenty-eight points, and I find that the railway company receives for freight an average of 25 97-100 per cent. of the cost of the lumber to the consumer, and that the retail dealer receives an average of 15 21-100 per cent. of the cost of the lumber to the consumer. This, I think, should be conclusive as to whether the retail dealer obtains excessive profits upon the business done by him when it is borne in mind that the expenses entailed in carrying on a lumber business are estimated to be 10 per cent. thereon. I also think the public can readily conclude whether the railway company are really doing their utmost to lessen the cost of lumber in the matter of transportation.

The lumber areas are more or less widely separated and manufacturing for the markets of this country is being carried on at all points. Commencing at the west end of Lake Superior and westward and north through the Dauphin district and on to Prince Albert, Edmonton and south along the Calgary and Edmonton railway, as far south as Okotoks and High River, and the vicinity tributary to Macleod together with the extensive operations of both the mountain and coast of British Columbia. On these several timber areas there are over one hundred mills manufacturing lumber and shingles for this market, and as to the price of lumber at wholesale, competition and selling is carried on actively. Spruce lumber, somewhat lower in price, has become much in request of builders, and this present season the manufacture of it will amount to one hundred and fifteen million feet or over. We find the manufacturers of spruce competing in this class with the white pine and mountain lumber, and white pine and mountain lumber being pushed for sale at all points, and the extensive manufacturers of the coast are everywhere in the market. At present owing to the high cost of transportation, the white pine manufacturers are unable to successfully meet competition west of Indian Head.

Much unfavorable comment has been advanced as to the restrictive tendency of the association. In answer to this I might state that there are now three hundred and thirty-seven active members or retail dealers who attend to the retail lumber business of this province and the Territories, and with the operation of railways now in course of construction there will be over 500 lumber yards. At one hundred points there are two

lumber yards, sixteen points, three yards, seven points, four yards, and eight in the city, with increasing membership as the business warrants it. On lines of railway in course of construction all applications for membership without any preference in the matter of priority of application are granted, and in extending the association beyond its present confines all dealers are accepted on an equality.

This association is careful to look into the interests of the purchaser as well as the seller of lumber, insisting that no exorbitant charge be made on lumber, and the requirements of the country for lumber is carefully looked after. This association is administered by a careful board of directors who are capable of grappling with any situation that may arise. There is no association whether mercantile or professional which is conducted on broader lines, and the members of it appreciate the advantages of it to them in their business. Exception has been taken to this association as being calculated to foster high prices, but it will be observed from the preamble and by-laws of it, that such is not contemplated, and rather that the purpose is to enforce legitimate business conducted on a moderate percentage over the wholesale cost, as therein stated, and I think as shown by the foregoing statement of the percentage received by the retail dealer it is very moderate indeed, especially after deducting therefrom the expenses attending a retail yard and interest account, which must necessarily mean a considerable sum.

As to the undue cost of lumber on the part of the manufacturers, I do not think there need be any concern, when it is taken into consideration the large and varied manufacturing interests, having a storing disposition on the part of manufacturers to prevent an accumulation of lumber in stock. Nor need there be cause for alarm as to the supply of lumber, which will be found to be quite large enough to meet all demands. At the end of the lumbering season of 1903 there was estimated in the lumber yards of the mills to be about 140,000,000 feet and perhaps 80,000,000 feet in the yards of the retail dealers throughout the country. The probability is that at the end of 1904 the lumber in stock at the mills will be found to have increased."

DISCUSSION.

The Secretary was highly complimented upon his excellent report, and a long discussion followed on freight rates, as dealt with in the report. The exorbitant freight charges were roundly denounced and many individual cases of excessive charges were reported. The agitation throughout the country on account of the high price of lumber was dealt with. The farmers blamed the lumber dealers for this, but it was easily shown that the enormous railway rates were the cause of the high cost of lumber. The dealers claimed they were selling their stocks on a margin of 15 to 20 per cent. On this small margin they were obliged to carry large stocks and often also sell on long credit dates in order to assist and accommodate their customers. The freight charges, which represent a large portion of the cost of lumber, had to be paid in spot cash, while they were obliged to sell on credit largely. On this basis their margin of profit was very small.

The election of officers followed. John L. Campbell was re-elected president and D. E. Sprague, of Winnipeg, was made vice-president. Three vacancies on the Board of Directors were filled by the election of the following : G. B. Housser, of Portage la Prairie, J.E. Parrott, of Solsgirth, and G.E. Davidson, of Manitou.

On resuming on Thursday morning the first matter taken up was the question of a mutual fire insurance system for retail lumbermen. This was debated at considerable length and with a general feeling in favor of an effort to establish such a system at once. The rates of insurance paid by lumbermen were declared to be exorbitant, and were shown to range from 2 to 5 per cent. One or two members declared that they had been compelled to pay even higher rates. A special committee was appointed to secure information and report to the executive, and the directors were authorized to go on at once with the adoption of a system of fire insurance if the committee's report were favorable. The feeling of the members was very strongly in favor of immediate action in this matter, as they believed they were being heavily mulcted by the insurance companies.

A discussion on the lien laws next followed. A committee was appointed to confer with the proper authorities in an endeavor to have the laws of Manitoba and the Territories remedied.

In the afternoon the longest discussion of the meeting took place on the position of wholesalers in the Association. This was precipitated by a motion from Mr. Smith to the effect that honorary members should be dropped from membership. He contended that as this was a retail association it should be composed solely of retailers, and he charged that the wholesalers had had too much voice in directing the affairs of the association in the past. Several members seemed to agree with this ; others wanted the situation to remain as it was, but the consensus of opinion seemed to be in favor of having the wholesalers present at the meetings and allowing them to take part in the debates, but not permitting them to vote. The prevailing opinion was that every effort should be made to work in harmony with the wholesale manufacturers, as their interests were largely identical.

An amendment was moved by Mr. Clark to the effect that honorary members should be debarred from holding office or voting, and that they should be relieved of the payment of membership fees. The amendment was carried practically unanimously. The honorary members will therefore remain on the membership roll, but will be barred from voting and holding office. In this connection it may be noticed that the manufacturers have recently formed an association of their own, independent of the retail association. In the future, no doubt, it will be found advisable to hold the annual meeting of the two societies—wholesale and retail associations—at the same time, so that a conference could take place on any questions requiring joint action.

A resolution to the effect that membership should be refused to any applicant who had less than $5,000 capital to invest in his business was sat upon vigorously, and did not come to a vote.

The last discussion took place on the question of line yards, as introduced by the delegates from the western branch associations. The western delegates asked the association to declare against line yards. A long discussion followed and some strong speeches were made against the line yards. Representatives of line yards present declared that they were living up to the rules of the association. Several amendments and counter motions were introduced, and finally a motion to postpone indefinitely put a stop to further discussion.

On motion of Messrs. Graham and Van Wart a recommendation to the Board of Directors was made to increase the salary of the secretary by the sum of $300.

An adjournment indefinitely was then carried.

TRANSMISSION ROPE.

The Consumers' Cordage Company, of Montreal, having received many enquiries from time to time regarding the relative efficiency of three and four strand rope, give the following reasons for the position they take in always recommending three strand rope in preference to four strand:

Three strand rope is laid more closely, has no heart and the strands bear on each other evenly. On the contrary, there is a space left in the centre of four strand rope, which is usually filled up by a heart. The rule in making rope to get at the number of yarns put into the heart is that the heart should contain 1/13th of the total number of yarns in the strands composing the rope. Supposing a four strand rope contained 132 threads, the heart would be equivalent in bulk to 10 threads, while the strands would contain 33 threads apiece. It is readily seen how much inferior in strength the heart is to any single strand, and it is not surprising that when a strain comes upon the rope that the heart is the first to break. After the heart is parted a space is left inside of the rope, one of the strands cuts in, the rope is stranded and after a time goes to pieces. With a three strand rope this does not occur, for the strands bear evenly.

Furthermore, the strength of four strand rope is much inferior to that of three strand. We give you below tests of three and four strand rope made by United States Government at the Watertown Arsenal.

COMPARATIVE TESTS, PURE MANILA ROPE.

Cir. Size	3 Strand.	4 Strand.
2¼ inch.....	6206 lbs.....	4633 lbs.
3 "	9800 "	8583 "
4½ "	20873 "	18100 "

The above is the average of three tests.

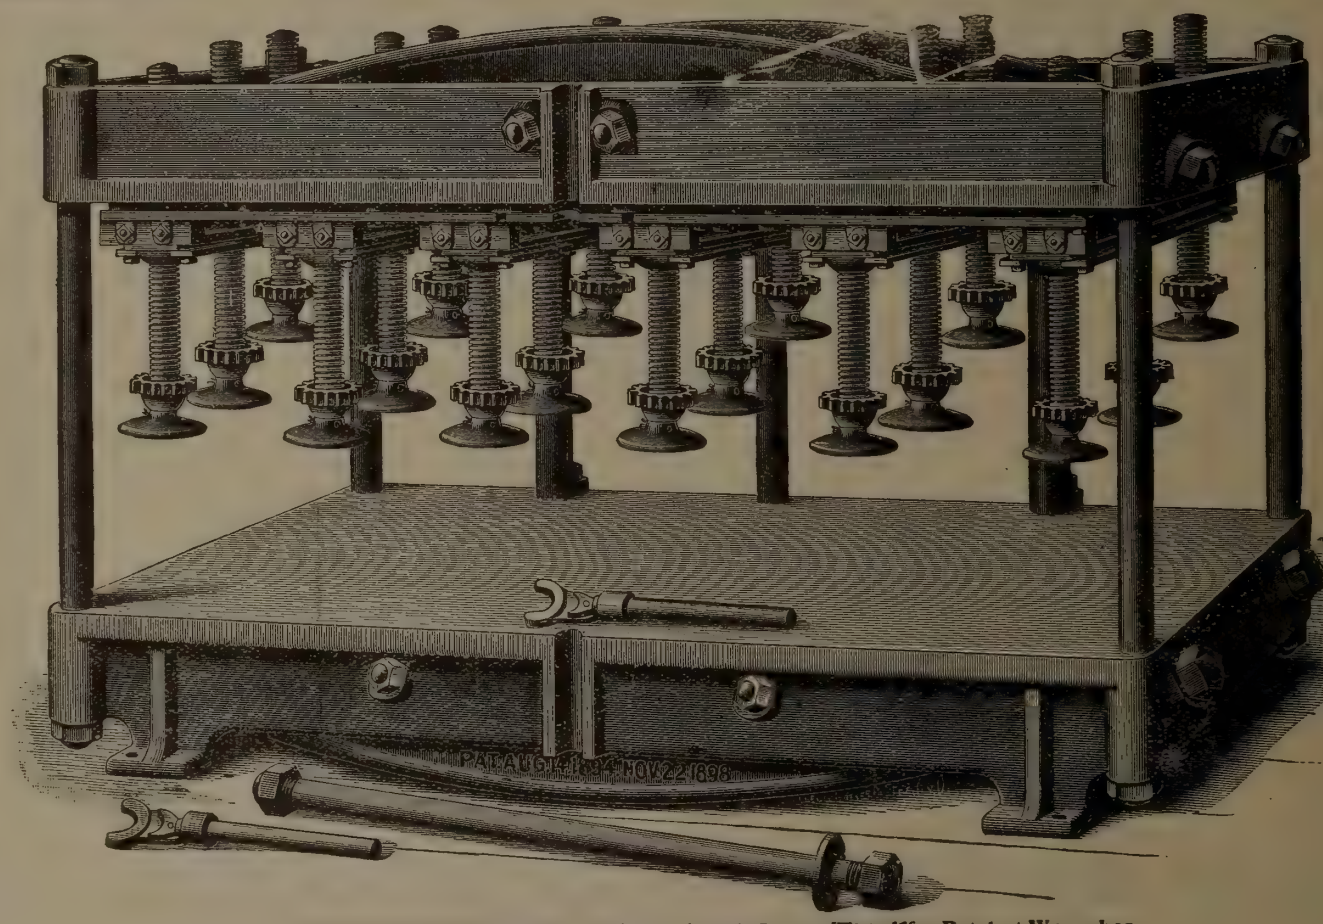
There is no room for question but what three strand rope is stronger than four strand rope. Three strand rope is also much better adapted for transmission of power because it can be more easily and thoroughly spliced, no matter how expert a man is employed for this purpose.

A company was recently formed at Victoria, B. C., with a capital of $50,000, to conduct lumbering operations and build a saw mill at Port Renfrew. It is now stated that the proposed mill will be erected at Victoria.

The Preston-Bell Furniture & Lumber Company have the crib-work for their new saw mill at Fort Francis, Ont., well under way. The mill will be 84 x 40 feet, equipped with modern machinery, electric light, etc., and will have a capacity of 60,000 feet per day.

If you are using glue to any extent it will pay you well to thoroughly investigate the subject of

MODERN GLUE-ROOM APPLIANCES



No. 26 VENEER PRESS.—With Guides and with Screws Fitted for Ratchet Wrenches.

This engraving represents our improved large complete Veneer Press, which is the most convenient and best paying press of this kind ever introduced.

In it are combined all the features of advantage, insuring perfect work and convenience in operation. The principal points of advantage are: A solid and perfectly true plate to clamp the stock against. **Screws adjustable in both directions** in the press. **Ratchet Wrenches** to apply the pressure at lower end of screws. **Guides** to keep the stock in line while being pressed. **Open side,** allowing stock to be placed in position from the front. Most of these points are only found in this style Press.

The **top** and **Base are extra heavy** and are strongly ribbed and braced, and are strengthened by large steel truss-rods drawn tightly over their arches.

The **Cross-sections** are also strengthened by steel draw-rods.

The **Screws** are made of 2-inch steel, 24 inches long, and have square threads.

The **Nuts** in which the screws work are made of the **best and toughest malleable iron,** are tapped out, have a **long thread-bearing,** and are adjustable in the cross-sections which slide in planed ways, lengthwise of the press. By this arrangement the screws can be placed closely together or in almost any position to suit the operator.

The Press is 8 feet 6 inches extreme length or 8 feet 1 inch long between end uprights, is 36 inches extreme width of base, and 30 inches wide between uprights; has six (6) Cross-Sections with three Screws each (18 screws). The **weight** is about 6,000 pounds.

The Press as shown is 37 inches between base and top, and will take in 25½ inches between the bottom of flanges on screws and top of base. This distance can be increased or diminished to suit the purchaser.

The number of Cross-sections and also the number of Screws in each Section can be altered to suit the purchaser.

Our special Glue-Room Catalogue No. 1197 shows Veneer Presses of various sizes and styles, Hand and Power Glue Spreading Machines, Trestle Clamps, Double Clamps, etc., etc. We send this upon request to all interested parties. Be sure to mention the number, 1197.

Branch Offices:

IMPERIAL BUILDING MONTREAL.

22 GREAT ST. HELEN'S, LONDON, E. C.

The Weekly Lumberman — Published every Wednesday, contains reliable and up-to-date reports of market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

The Monthly Lumberman— A 32-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, character sketches and portraits of leading lumbermen, etc. Its special articles on technical and mechanical subjects are especially valuable.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue

TIMBER LIMIT FOR SALE

BERTH NO. 3 SITUATED ON THE SOUTH-WEST corner of the township of Creelman, comprising lots number 7, 8, 9, 10, 11 and 12 in the first, second and third concessions; good location, Vermillion river running through centre. For terms and particulars apply to W. RYAN, North Bay.

WANTED

1 in. Brown Ash, Mill Run, Mill Culls out. To be in fair shipping condition and good average widths. Also 1¼, 1½ and 2 in. Ash and 1 and 2 in. Elm.

HURDMAN & ELMITT,
Ottawa, Ont.

LOGS FOR SALE

THERE WILL BE SOLD BY PUBLIC AUCTION at the Clifton House, Burk's Falls, Parry Sound District, on the 21ST DAY OF APRIL, 1904, at 1 o'clock p. m., one million eight hundred thousand feet of Hemlock, Pine and Birch Logs in the Townships of Chapman and Ryerson.

The logs are in two different lakes and will be sold in separate lots.

Mills are convenient to cut logs at once.

Also 1,200 acres of standing timber near Burk's Falls, Parry Sound District.

For further particulars apply to

THE BRODHAGEN LUMBER CO., Limited,
Burk's Falls, Ont.

FOR SALE—BIRCH, ABOUT 500 M; MAY be cut to order. BOX 134, CANADA LUMBERMAN, Toronto.

SITUATION WANTED AS BAND SAW Filer; ten years' experience; first-class references. 20 Florence Street, Barrie, Ont

FOR SALE—WHITE PINE UP TO 60, HEMlock to 30, to saw to order into large timber. BOX 127 CANADA LUMBERMAN, Toronto, Ont.

FOR SALE—MACHINERY OF 12 M STEAM Lumber Mill, with Automatic Shingle Mill; would sell Boiler and Engine separately. S. WALKER, Verona.

RED CEDAR, ABOUT 150 MILLION, 3000 acres; on drivable river tributary to C.P.R. in British Columbia; 20 cts. per M, payments mpending over four years. Low freight to great markets of North-West. Address Box 83, Vancouver.

WANTED—BY A THOROUGHLY COMPEtent young man, with sixteen' years experience, situation as saw mill superintendent, or overseer. Can furnish first class references. Apply Box No. 130 CANADA LUMBERMAN, Toronto, Ont.

230 feet No. 77 Chain.
430 feet ⅝" Refuse Carrier Chain.
700 feet 2½" Warring Line.
Apply to THE SNIDER LUMBER CO., Gravenhurst, Ont.

JUDICIAL SALE.

Pursuant to an Order made on the 9th March, 1904, in an action in the High Court of Justice for Ontario, in which the Cook and Brothers Lumber Company of Ontario, Limited, are Plaintiffs, and W. H. Sawyer Lumber Company are Defendants, sealed tenders will be received addressed to the "Master in Ordinary, Osgoode Hall, Toronto, Ontario", and marked "Tenders in Cook vs. Sawyer," up to eleven o'clock a.m. on FRIDAY, THE 15TH DAY OF APRIL, 1904, for the purchase of four parcels of merchantable White Pine Lumber, 12, 14, and 16 feet in length, hereinafter described, which lumber is now at the Village of Spragge in the District of Algoma, upon the docks of the plaintiffs who are the Vendors:—

PARCEL I.

This Parcel consists of lumber manufactured at the plaintiff's Mills at Spragge during the season of 1903 from logs cut on the Sable River during the winter season of 1902-1903, which lumber had been in cross-piles sixty days before the close of navigation for the season of 1903, which lumber is estimated at 1,811,515 feet Board Measure and is more particularly described in posters.

PARCEL II.

This Parcel consists of lumber similar in other respects to that described in Parcel I., except that it had not been cross-piled for sixty days as aforesaid, which lumber is estimated at 1,655,515 feet Board Measure, and is more particularly described in posters.

PARCEL III.

This Parcel consists of lumber manufactured at plaintiff's said Mills during the season of 1903 from logs cut in the Serpent River during the winter seasons of 1901-1902 and 1902-1903, and comprising the product (estimated at about 875,000 feet) of the last 8,965 of the said "logs" manufactured into lumber at the said Mills during the season of 1903.

PARCEL IV.

This Parcel consists of lumber similar in other respects to that described in Parcel III, except that it was manufactured from logs cut during the winter season of 1902-1903, and is estimated at 2,508,702 feet Board Measure, and is more particularly described in posters.

Tenders are to be at a price per 1,000 feet Board Measure delivered on the plaintiffs' dock at Spragge, and are to be made on each of the above four parcels separately, together with an offer for any mill culls which may be found in the merchantable lumber when shipping same.

Lumber on shipment to be measured and inspected at Spragge by Messrs. Martin and Boggs, of Cheboygan, Michigan; and such inspection and measurement shall be final and conclusive as between the Vendors and the purchasers, who are to bear equally the costs of said inspection and measurement (at Twenty-five cents per 1,000 feet, Board Measure).

Shipment to be made by water commencing on opening of navigation in spring of 1904, and all lumber to be removed from docks at Spragge one-half of each parcel before 1st June, 1904, and the balance before 15th June, 1904.

TERMS:—Ten per cent. when tender is accepted; the remainder within ten days from the day of shipment of each cargo.

All payments to be made in funds current at par at a Bank in Toronto.

Time is to be of the essence of the contract of

purchase and in case of any purchaser making default in removing the lumber, pursuant to contract, he shall pay to the Vendors as liquidated damages an additional sum of 5 cents per 1,000 feet Board Measure for the lumber in respect of which such default shall occur, and all make such payment for every day during hich such default shall continue.

The purchasers are to pay to the vendors a proportionate part of the insurance premium paid in respect of said lumber to be computed from the date of acceptance of tender by the Minister in Ordinary.

...ndors are not to be held responsible for ...f lumber for which tenders are now ...d if the same is prevented by fire, strikes ...r other events beyond their control.

The property in the lumber is to remain in the Vendors until full payment is made in cash.

The highest or any tender will not necessarily be accepted.

Every tender shall be deemed to have incorporated therein the provisions of this advertisement.

Specifications of lumber and further particulars may be obtained at the office of

THE COOK AND BROTHERS LUMBER COMPANY OF ONTARIO, Limited,
Room 1. Manning Arcade,
24 King Street West, Toronto

or of MESSRS. MARSH & CAMERON,
25 Toronto Street, Toronto.

Dated at Toronto this 16th day of March, 1904.

NEIL McLEAN,
Chief Clerk, M.O.

FOR SALE

ABOUT 1,000 CORDS SPRUCE PULPWOOD and about 2.000 Spruce Piles, 30′ to 60′. May and June delivery on cars, boat or in rafts at Papineauville, Que. Address P.O. Box 13, Papineauville, Que.

CURRENT TRADE CONDITIONS.

ONTARIO.

The feeling of hopefulness displayed by the lumber trade is more pronounced than at any previous time this year. As the result of better weather, everything has a brighter look and there are evidences of much greater activity in the near future. The railways are making some progress with the movement of congested freight, but there is still a large quantity of lumber waiting shipment. Buying of white pine has been quite general during the past week, several lots in the Georgian Bay district having changed hands at good figures. Log run is selling as high in price as last year, and lately a disposition has been shown to hold for an advance. For the small quantity of unsold dry lumber on hand high prices are being asked. Ten and twelve inch common pine has been marked up by some manufacturers about $1 per thousand feet, $23 being asked for lengths from 18 to 24 feet. Dry hemlock and spruce are also showing a hardening tendency, 2 x 6 in. hemlock, 12 to 14 feet in length, being held at the mills at $12.50. There is a strong demand for all hardwoods, with considerable inquiry for suitable export stock. Prices are hardening as the result of liberal buying and in sympathy with the strong market in the United States. Lath are inclined to be a little weaker, but as building operations progress the demand will improve and prices strengthen accordingly.

MANITOBA AND BRITISH COLUMBIA.

The outlook for the lumber business in Western Canada is brightening. For the first three months of this year the building permits taken out in the city of Winnipeg repesented in value upwards of $700,000, which is an increase of $208,000 as compared with the corresponding period of 1903. Similar activity prevails at Vancouver, Victoria and other western points, and there promises to be a brisk demand for the class of lumber required for building purposes. The market is still somewhat unsettled, although a report from British Columbia states that it has been decided to maintain present prices notwithstanding the abandonment of the proposal to form a selling pool.

UNITED STATES.

More activity is exibited by the lumber trade of the United States, and this notwithstanding that shipments have for the past two months been of considerable volume. White pine shipments from the Mississippi and Wisconsin valley mills amounted to 115,000,000 feet during February, a decrease of only 6 per cent. as compared with the same month last year. The wholesale centres report an increased number of enquiries for shipment to New York, Philadelphia, Boston and other eastern points, and a pronounced revival in trade this month is confidently looked for. The most urgent demand is for box lumber, although prices of No. 3 and better have become firmer since the shortage of the new cut became generally known. There is very little dry lumber of the lower grades at the mills.

The position of hardwoods is very favorable, with a tendency towards higher prices. Wisconsin birch is bringing fully $2 a thousand more than last fall and the inspection is less severe. Dry hardwoods in Michigan are very scarce and the leaders have advanced in value from $2 to $3 a thousand. Birch No. 2 common and better is bringing in $23 to $25; soft elm, $25; and rock elm $24 to $25. Maple prices are about the same as at the close of last year. It is estimated that 40 per cent. of the new cut of hardwoods has been contracted for. Long lengths of hemlock lumber are in splendid request and mill stocks are very light. No decline in prices is looked for.

GREAT BRITAIN.

It is not possible to report much improvement in the timber trade of Great Britain. Few contracts are being closed and there is still a disposition to adopt a waiting attitude. It is freely predicted that deals will be sold at lower prices, but as regards the smaller sizes the situation seems to be stronger and the stock offered is being taken somewhat freely. The Board of Trade returns show that the trade of the country is sound, but it is expected that any improvement will be of slow growth. The volume of business with South Africa has been disappointing to British merchants, and the financial difficulties have created a feeling that caution will have to be observed this year to prevent further disaster to those who have been carrying heavy stocks bought at high prices. Auction sale prices have been lower. Two lots of 2-inch first quality broad pine deals sold at £31 5s. per standard, and some third quality pine, 10 and 11 feet, at £10 to £11. A large line of Quebec deals, 3x9 in. unassorted, brought only £8 5s., and 2x9 in. only £7 10s. A few lots of 3x9 in. second quality Quebec spruce sold at £9 15s., a decline of 5s. as compared with the previous price. First quality 3x9 in. brought £11 per standard. Notwithstanding the tendency towards weakness reflected in the above prices, we are told that importers who have refrained from making their purchases of pine deals are now realizing that they will have to pay the increased prices asked by shippers if they wish to secure the stock.

STOCKS AND PRICES.

John Baker, of Baker's Settlement, N. S., expects to saw 500,000 feet of lumber this season with his rotary mill.

Alfred Dickie, of Lower Stewiacke, N. S., has 65,000,000 feet of logs available for this season's sawing operations.

Tenders are invited up to Tuesday, April 12th, for the supply of lumber required by the city of Winnipeg during the current year.

The Okanagan Lumber Company have placed contracts with several settlers for taking out logs. Derby Bros. & Butters, at Lumby, B.C., have delivered about 900,000 feet on Besette Creek, and W. F. Wood, of the same place, has taken out a considerable quantity. The company pay $4 a thousand and stumpage.

BROOM HANDLES.

If an enterprising man with supplies of cheap Spruce, Basswood orPoplar care to put in several machines to work broom handles we cantake his output. Write in first instance to Empire, care of CANADA LUMBERMAN.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

From all that can be learned, the Ottawa district lumbermen are looking forward to a big summer's business. The predictions made from time to time in these columns bid fair to come true, at least in as far as the American market is concerned. Said a leading lumberman to-day: "The American market looks bright, very bright. Higher prices are being paid for low grade lumber, and the high grade lines are holding to their high prices. There's no question but what the American market is going to take a lot of Canadian lumber this year. As a matter of fact, we have sold more up to date than in any previous year."

The same informant, however, was not as optimistic regarding the English market. He stated that the war situation has caused a feeling of uneasiness in the Old Country, and dealers are not purchasing any heavier in Canadian lumber than they can help. They are just securing sufficient to supply immediate demands.

The Spring so far has been a favorable one for the lumbermen. Hauling operations have been carried on several weeks later than usual, and all the logs and square timber have been placed at the stream side. Every provision has been made for a prompt movement of the logs this Spring, and it is not expected that many will be tied up, as was the case last season on some of the Quebec streams.

The lumber industry has undergone a great boom along the lower Ottawa in the past few years. At L'Orignal, below Hawkesbury, no less than four mills have been erected. The firms interested are Williamson & Morrison, Church & Sons, Arthur Bell and Frank Stearns. Although these mills do not enjoy railway facilities, their sites as far as the river is concerned are superior to anything on the Quebec shore which is paralleled by the north shore line of the C. P. R. Across from L'Orignal at Calumet Mr. George H. Perley's mill, remodelled and enlarged, has cut lots of lumber in recent years.

Nearly all the small mills along the Canada Atlantic and Canadian Pacific Railways out of Ottawa, kept running this winter, although the deep snow made log hauling somewhat difficult. Along the Hawkesbury and Rockland branches of the Canada Atlantic, in districts where one would seem to think all the timber had been removed years ago, good quantities of log and square timber were taken out this year.

During the past four months the Canada Atlantic Railway Company handled 180,000 saw logs and 4,000 pieces of square timber from Mr. J. R. Booth's limits along the Madawaska. This traffic is now at an end. All the logs were delivered at the Booth mill here, while the square timber was unloaded into the St. Lawrence at Clark's Island. When the ice leaves it will be rafted down to Quebec city for export to England.

The recent thaws removed the anchor and other ice from the channels at the Chaudiere, and there is now a full supply of water for the wheels. The Booth saw mill and other concerns are running full time on water power again.

Ex. Ald. Charles Desmarais, of Hull, had a busy season in the bush in the Pontiac district. He has now on hand, at a convenient point for shipment, a large stock of telegraph and telephone poles. Mr. Desmarias has a contract on hand to take out in the same district 10,000 cords of poplar pulpwood during April, May and June.

CANADIAN LUMBER SHIPMENTS.

From Halifax, N.S.: Steamer Parisian, for Liverpool, 864,498 ft. spruce deals, value $111,258, 106,308 ft. birch deals, value $1,286, 59,353 ft. hemlock deals, value $593.

From St. John, N.B: Steamer Lakonia, for Glasgow, 5,000 box shooks, 510,138 ft. deals, 82,489 ft. scantling, 16,315 ft. ends, 5 standards oak timber, 14 maple logs, 846 bundles maple flooring, 375 pieces pine deals, 60 tons pine timber. Schooner A. P. Emerson, for City Island, 254,118 ft. plank, 16,219 ft. scantling. Schooner Romso, for Providence, 42,227 ft. plank, 99,337 ft. scantling, 2,758 ft. boards. Steamer Oruro, for West Indies, 10,000 laths, 44,340 onion crate shooks.

THE BEST LUMBER SALESMAN.

Mr. W. J. Harwood, of Mattawa, Ont., writes under date of March 28th to the publishers of the CANADA LUMBERMAN as follows: "Will you kindly stop my ad. 'Shingles for Sale,' in the CANADA LUMBERMAN. Shingles are all sold, and 'ad.' keeps me busy writing to buyers that such is the case."

Moral: If you wish to sell or buy anything in the lumber line, advertise in THE LUMBERMAN.

Mr. Morris S.M. Long, of Hamilton, who for the past eight years has been indentified with the lumber trade, has embarked in the wholesale lumber business for himself, with offices in the Spectator Building, Hamilton. For the past four years Mr. Long has been secretary of the Nipissing Lumber Company, which position he still holds. Owing to his wide connection Mr. Long will no doubt succeed in building up a large and profitable business.

BRITISH COLUMBIA LETTER.

(Correspondence of the CANADA LUMBERMAN.)

VANCOUVER, March 28th, 1904.—Conditions in all lines of the lumber industry in this province are at present firm, and there are ample indications that they will remain so. Last year was a disastrous one to loggers, several operators becoming bankrupt, and a large number of camps closing down. This, with the deep snow this winter, has caused a scarcity, and good merchantable logs sell from $6 to $7 per thousand. Even yet there are five feet of snow in the woods, and though one or two camps have resumed operations, it will be another month before the stringency is relieved.

Those writing insurance on logs have been heavy losers this winter. It is estimated by Mr. W. H. Higgins, President of the Loggers' Association, that over ten million logs have been lost in the storms which have been so prevalent in the Gulf of Georgia and off the British Columbia coast during past four months.

There have been some busy sessions of the British Columbia Lumber and Shingle Manufacturers' Association during the past week, and for a short time it looked as if there was going to be a cut in prices. A selling pool was talked of for the Association, a step further than the combine in prices which has before obtained, but this has been abandoned because the large firm of E. H. Heaps & Company refused to enter. The members of the Association met morning, noon and night for a week, and Mr. Heaps was interviewed at his house by some mill men prominent in the organization, and at last the announcement was officially made that no pool would be formed, and that everything would proceed as formerly.

Prices for rough lumber range in the neighborhood of $13, while that for the finished article varies. This figure has been maintained for some time, and will likely remain so. The demand locally is exceptionally brisk, the building in Vancouver being twice as great as last year, which was considered the best since the city started. The supply for the Northwest will be larger than ever and the manufacturers anticipate a busy season with good prices.

Ontario lumbermen are becoming largely interested in this Province. Mr. W. Irwin, of Peterboro, and Mr. G. McCormick, M.P. for Muskoka and Parry Sound, are large shareholders in the Pacific Coast Lumber Company, of Vancouver, which has the best and most modern plant on the coast, or perhaps in the world, and lately another large deal was put through. This latter was the purchase of the Kamloops saw mill and timber limits. Mr. Peter Ryan, of Toronto, who was interested in the sale of the limits, was out, as were also the others. Mr. G. W. Fowler, M.P. for King's county, N.B., is to act as manager of the company for a short while.

Conditions in the interior of the Province, where the manufacturers are joined into the Mountain Lumbermen's Association, are as good if not better than at the coast. They have the ever increasing market of the Territories at their very doors, and the most is being made of it. A large number of mills are going up, although this winter a few went to the wall, the cause of starting with too small capital. These were some of the lesser concerns, and were soon absorbed.

We own and operate several mills in Washington and British Columbia, being on both sides of the "Imaginary Line" known as the International Line, and it keeps our opponents in the trade guessing how to meet us on account of the good quality of our manufactured stock, which has been so carefully planned that even the selection of our timber lands in years past has something to do with the present.

We find our competing salesmen's story to the customers has now got to be a "song pure and simple," which they have learned from necessity to sing loudly and lustily, and is as follows : **"JUST AS GOOD AS HASTINGS." "JUST AS GOOD AS HASTINGS."**

While we appreciate their holding our goods as models of perfection, which the high standard certainly merits, still looking at the matter from the customer's and the consumer's standpoint we cannot see any advantage to you in buying an imitation when the real article can be had through our representatives, viz :—

James Twitchell, Clinton, Ont., for Ontario, Canada
Samuel Ashfield, Winnipeg, Man., for Manitoba and the North-West Territories
Smith, Duplain & Crumb Co., Rockford, Ill., for Illinois, Indiana, Ohio and Wisconsin

He has also built a tug for the Yale Lumber Company, the machinery for which is being supplied by N. Thompson & Company, of Vancouver, who are now installing boilers for the same company.

—The Okotoks and High River Lumbering & Development Company, Limited, is seeking incorporation, to acquire the business of lumbering and mining now conducted by the Okotoks and High River Lumbering & Developing Syndicate at Okotoks and High River, N.W.T.

—The Red Deer Lumber Company, which has established a large saw mill at Red Deer, N. W. T., is composed of O. A. Robertson, St. Paul, president; J. A. Brown, George B. Barnes, jr., St. Paul; W. P. Dutton, Winnipeg; G.W. Dutton, Sycamore, Ill.; and S. G. Comstock, Moorhead.

—The saw mill of F. E. Sayre & Co., St. John, N. B., resumed operations recently after having been closed down since Christmas. In the meantime there was installed machinery for the manufacture of staves and heading, and it is the intention to further increase the equipment in the near future.

—Chappell Bros. & Company, of Sydney, N. S., who have one of the largest and most up-to-date woodworking plants in Eastern Canada, are increasing the facilities of their branch factory at Glace Bay and have placed orders for a number of woodworking machines with J. Ballantyne & Company, of Galt, Ont.

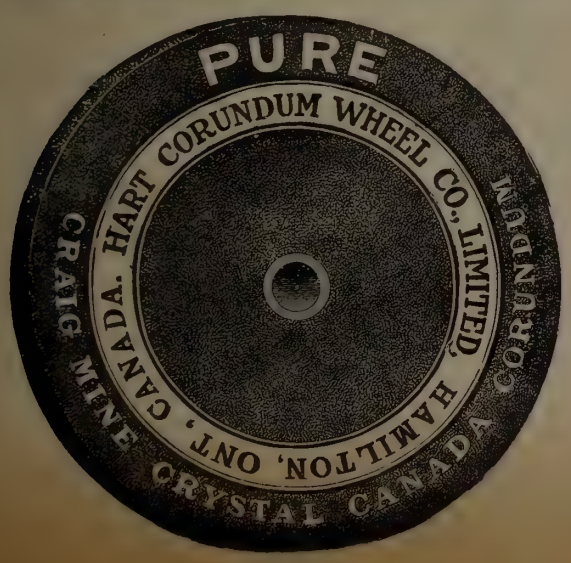
—The Tobique River Log Driving Company, of Woodstock, N. B., desire amendments to their act of incorporation to change the date and place of meeting to the first Wednesday in April of each year at Fredericton and giving the right to the company to receive tenders for the driving of logs instead of sale by public auction as at present provided.

—Lemon, Gonnasson & Company, of Vancouver, B.C., are making extensive improvements and additions to their planing mill and sash and door factory. A new saw mill, with a daily capacity of 20,000 feet and 130x40 feet in size, is in course of erection, the boilers for which will be supplied by R. Seabrook, of Victoria. The company expect to have the new plant in operation within three months.

—The Sarnia Bay Timber & Salt Company has been incorporated, with a capital of $300,000, to acquire the business of the late Edmund Hall at Sarnia and Nairn Centre, Ont. The new company is composed of W. D. Lummis, of Toronto; J. J. McFadden, of Sault Ste. Marie; W. J. Bell, of Sudbury; John Ferguson, of Renfrew; Lorne Hale, of Pembroke, and William Anderson, of Ottawa, all well-known lumbermen.

—E. Stewart, Dominion Superintendent of Forestry, has recently been in the west, and when in Winnipeg consulted with government officials regarding the advisability of selling portions of permanent timber reserves in Manitoba on which settlers have encroached. The reserve particularly affected is in the Riding Mountains, south of Dauphin, where a large number of people have squatted and have made improvements in spite of repeated warnings. It is understood that in order to stop future encroachments of this kind on permanent timber reserves an act will be passed by the Legislature defining the boundaries of timber reserves and providing that timber lands squatted upon cannot be transferred to any person except by legislative enactment.

CRAIG MINE CRYSTAL CORUNDUM WHEELS



Our Pure Crystal Corundum Saw Gummers have no equal for their rapid, cool, cutting properties.

Read the following from Bulletin 180 of the United States Geological Survey, which says:

"Often a distinction is made between emery and corundum, many persons not recognizing emery as a variety of corundum.

Emery is a mechanical admixture of corundum and magnetite or hematite. It is, of course, the presence of corundum in the emery that gives to it its abrasive qualities and makes it of commercial value, and the abrasive efficiency of emeries varies according to the percentage of corundum they contain."

Emery is imported, mined by Greeks and Turks and contains only about 25% corundum. Our Crystal Corundum is guaranteed to be 98% pure alumina, a Canadian product, mined and manufactured by anadians for Canadians.

HART CORUNDUM WHEEL COMPANY, Limited, Hamilton, Ont., Can.

THE Wood-Worker and Retailer

AN ELECTRICALLY OPERATED SASH AND DOOR FACTORY.

The new mill of the Baltimore Sash & Door Company, at the corner of Sharp and West streets, Baltimore, Md., is a good example of modern methods, and illustrates the great advance made in machine installation and factory equipment during recent years. The arrangement of apparatus shows careful and skillful planning and permits easy handling of material, with a maximum saving of time and labor. No space is wasted, and yet about each machine there is abundant room for operation, together with free head-room and a noticeable absence of the intricate belting and shafting usually found in wood-working establishments. Good light abounds everywhere. These obvious advantages are largely due to the foresight of the managers of this company in adopting a system of electric distribution of power and a well thought out plan of motor drive. The plan of driving larger machines each by its own motor is skillfully combined with group driving for lighter apparatus, the conditions peculiar to the work to be done being the determining factor in this division.

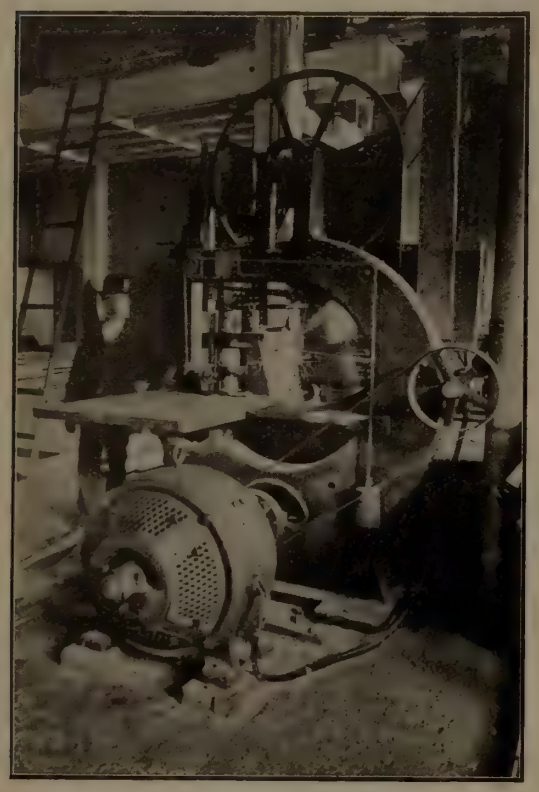


FIG. 1.—40 INCH BAND SAW.

The mill has a present capacity of five hundred doors and six hundred complete window sashe p er day of ten hours, or approximately one hundred and fifty thousand doors and one hundred and eighty thousand sashes in an ordinary working year. A specialty is made of high grade cypress and white pine.

The main building contains two floors, the first occupied by the door and moulding departments, while the second is largely devoted to the manafacture of sashes. An electrically operated elevator connects the two and provides adequate facilities for handling the necessary material and machinery.

Exhaust pipes over each machine collect the sawdust and shavings and feed into a storage tank over the boiler-house outside the main building. In this way cleanliness is always secured, and fuel sufficient for the power needed is delivered to the boilers, practically without handling and at an almost negligible cost. Draught for this purpose is provided by a 55 inch Sturtevant blower, mounted on a platform under the ceiling of the first floor and driven by a 42 h.p. Westinghouse open type multipolar motor. The entire system of blower, piping, storage tank, etc., was installed by the Dixey Blowpipe Company, of Baltimore.

The power plant is located in a separate building. Steam at eighty pounds pressure is developed in a pair of horizontal return tubular boilers, installed by the Thomas Brassher Company, of Baltimore, and equipped with the appliances necessary for burning sawdust fuel. All dust and dirt of fuel are confined within automatic feed pipes leading to the furnace. Boiler and engine-room adjoin but are separated by a brick partition.

FIG. 2.—CUT-OFF SAW.

A 155 h.p. Ball & Wood simple automatic engine, direct connected to a 100 k. w. 250 volt direct current Westinghouse generator, is at present in service. A second unit will be added later, as the mill is to be enlarged. A marble switch-board, with all requisite apparatus, furnishes control for the power and lighting circuits, which are run to distributing panels on each floor of the main building. From these distributing centers branch lines run to the various motors and lamps in each department. Means are also provided for the control of each motor at the machine or group of machines which it drives. Semi-enclosed Westinghouse direct current Type "S" motors have been adopted as standard; though a few of the multipolar open type are also used. There are, at present, about thirty motors with approximate total capacity of 250 h. p.

The machine equipment consists, in part, of: 16 inch cut off saw, 4,000 ft. per minute, made by J. A. Fay & Company, with 3½ h. p., 700 r. p. m. motor; end paneller, made by E. B. Hayes Machine Company, with 3½ h. p. 700 r. p. m. motor; panel raiser, capacity 600 panels per day, E. B. Hayes Machine Company, with 15 h. p. 600 r. p. m. motor; 14″ moulder,

FIG. 3.—SASH STICKER.

J. A. Fay & Company, with 15 h. p., 900 r. p. m. motor; 9″ moulder, J. A. Fay & Company, with 10 h. p., 1000 r. p. m. motor; No. 4 "American" 40″ band resaw, with 10 h. p., 630 r. p. m. motor; "American" double surfacer, with 7 h. p., 900 r. p. m. motor; 42″ band resaw, with 10 h. p., 600 r. p. m. motor; 16″ swing saw with 3½ h. p., 1600 r. p. m. motor; vertical shaft variety moulder, 3000 r. p. m., J. A. Fay & Company, with 2 h. p., 1200 r. p. m. motor; 42″ sander, J. A. Fay & Company, with 15 h. p., 650 r. p. m. motor; scroll saw with 2 h. p., 1200 r. p. m. motor; eight drill rail borer, E. B. Hayes Machine Company, capacity 600 rails per day, with 6 h. p., 700 r. p. m. motor; door clamp, E. B. Hayes machine Co., one door per minute, with

3½ h. p., 1120 r. p. m. motor; dowell driver, E. B. Hayes Machine Company, with 3½ h. p., 700 r. p. m. motor; double end tenoning machine, E. B. Hayes Machine Company, with 15 h. p., 1100 r. p. m. motor; 28 in. drill stile borer, E. B. Hayes Machine Company, with 10 h. p., 630 r. p. m. motor. This machine will in one day turn out material for 1200 doors.

On the first floor a 3½ h. p. motor operates

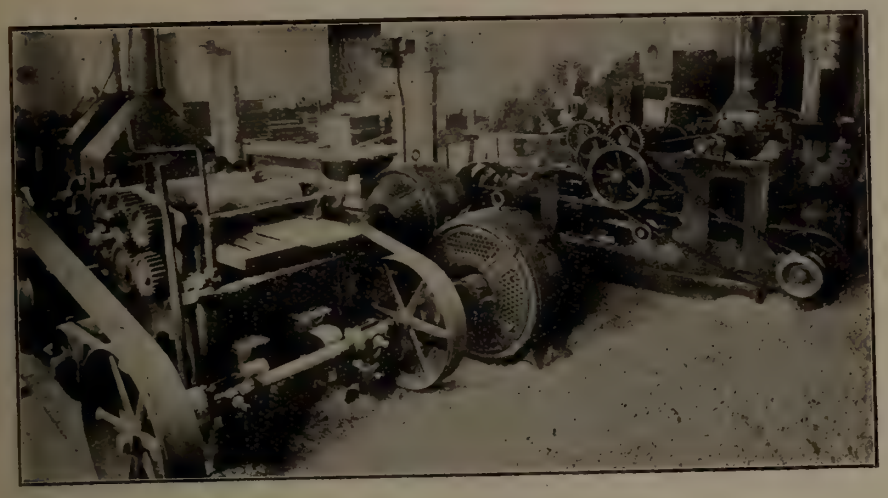

Fig. 4.—Moulder and Panel Raiser.

a small group of emery wheels and saw files in the repair shop. In the sash department 10 h. p. and 15 h. p. motors, respectively, operate two short line shafts, to one of which is belted two "American" sash stickers, one hollow chisel, one franking machine, one buzz planer and one gang rip saw, while the other drives a six inch, four sided moulder, one combination saw, one single end tenoning machine, one "American" sash dove-tailer, one chain mortiser, one pony planer, and one emery grinder.

During six months' operation the mill has more than filled the expectations of its owners, and has again demonstrated the convenience and economy of motor drive for work of this character. Large orders have already covered the entire output and made an increase in capacity necessary. Additions are being prepared and largely increased facilities provided to meet the growing demand for a well made product.

AMERICAN NO. 15 DOUBLE SURFACER.

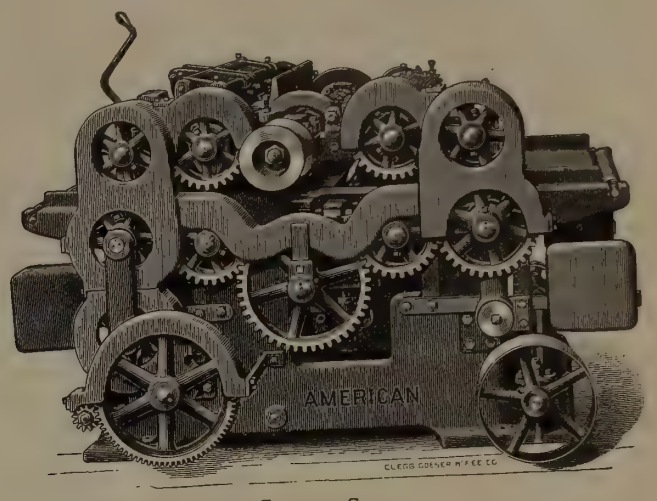
The accompanying illustrations represent a new machine just brought out by the American Woodworking Machinery Company. It is intended for general planing mill work and box factories and is built in two sizes to work 26 or 30 inches wide by 8 inches thick.

The bed raises and lowers by means of four large screws with bronze nuts, connected and operated by bevel gears and worked by a single crank. The bed is built in the most substantial manner, all working surfaces being planed and fitted and the whole strongly braced.

The feed consists of four rolls driven by heavy gearing made from accurately cut patterns. The lower boxes are adjustable without the use of wrenches. All pressure is obtained by weights and all gears are protected by housings. The top in-feed roll is divided so as to receive two pieces of lumber of uneven thickness and the pressure is equally applied to both the centre and outside boxes. The divisions of the roller have a parallel lift by means of connected yokes.

The cylinders are of hammered crucible steel, carrying three knives. The journals are of large diameter, running in long, self-oiling boxes lined with the best babbitt metal.

The top cylinder is double belted. The bottom cylinder is carried in heavy yoked boxes and arranged to slide out from the working side of the machine for sharpening and adjusting the knives. The yoke is clamped rigidly to the frame and has a vertical adjustment on gibbed ways by means of screws and worm gearing. The lower delivery roll is carried on the same casting, requiring no independent adjustment in changing from a double to a single surfacer.



Geared Side.

The lower cylinder is provided with a spout and the upper cylinder can be hooded, to which are attached pipes to take care of the dust and shavings.

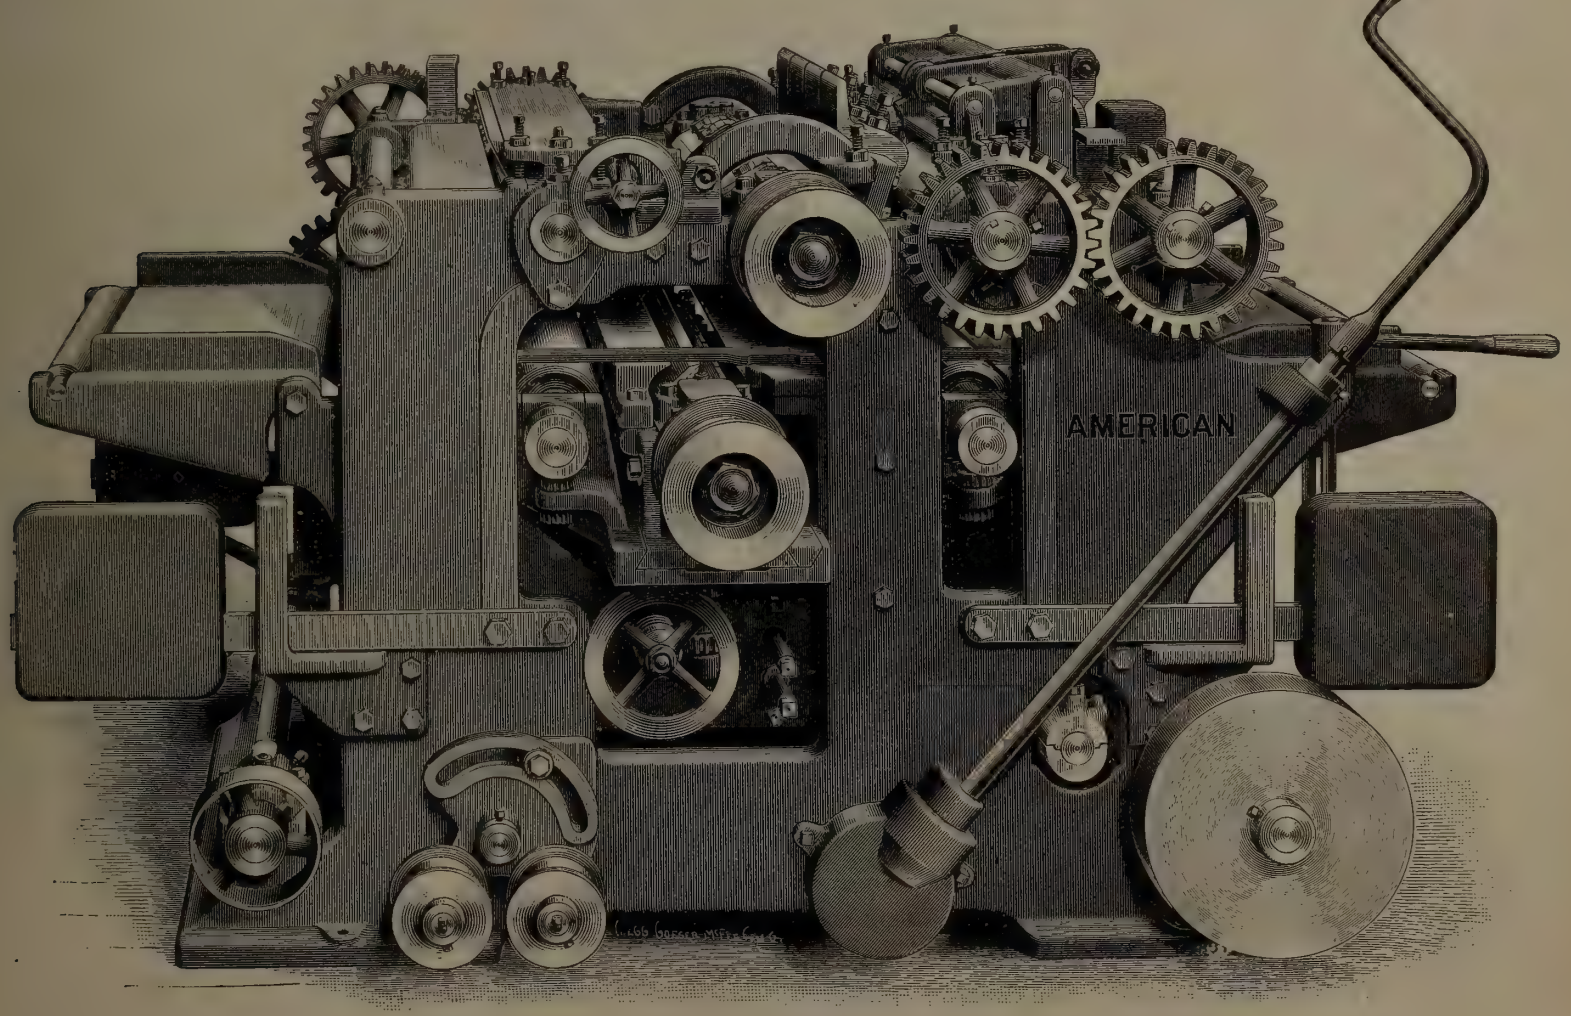
The chip breaker is made in four sections, each of which rises independently.

The pressure bar for the upper cylinder forms the bed plate for the lower cylinder and is adjustable by connected screw and worm gearing, worked by one hand wheel.

The expansion gear system is the most modern construction, heavy and strong, allowing a wide range of feed and making the machine a very powerful feeder.

Every part or piece of the machine is lettered or numbered for convenience in ordering.

For fuller description and prices on the above, or any other woodworking machinery, we would refer our readers to the American Woodworking Machinery Company, 136 Liberty street, New York City, and 43-45 South Canal street, Chicago.



No. 15 Double Surfacer—Built by American Wood-Working Machinery Company.

THE LUMBERMEN'S ASSOCIATION OF ONTARIO.

The annual meeting of the Lumbermen's Association of Ontario was held at the Queen's Hotel, Toronto, on Thursday, March 17th, succeeding a luncheon provided by the Board of Management. Among the members and guests present were Mr. W. D. Lummis, president; Hon. E. J. Davis, Commissioner of Crown Lands, and Messrs. John Bertram, Aubrey White, Thomas Southworth, W. B. Tindall, R. Laidlaw, J. S. Playfair, W. B. McLean, W. P. Bull, Toronto ; John McLelland, Parry Sound ; James Playfair, D. L. White, jr., and D. Turner, Midland ; Robert Watt, Wiarton ; R. Cook, South River ; W. T. Toner, Collingwood.

The Secretary, Mr. W. B. Tindall, read the minutes of the previous meeting, also the following statistical report :

STATISTICAL REPORT.

PRODUCTION OF WHITE PINE LUMBER.—The total production of mills in North-Western Ontario, which embraces all mills on the Georgian Bay, Northern Division of the Grand Trunk Railway to Callender, and Canadian Pacific Railway, North Bay to Rat Portage, in 1903 was 485 million feet. The comparison with former years is as follows: 1899, 351,000,000 feet ; 1900, 476,000,000 feet ; 1901, 466,000,000 feet ; 1902, 510,000,000 feet ; 1903, 485,000,000 feet, a decrease between 1903 and 1902 of 25,000,000 feet.

STOCKS ON HAND.—There is in pile at the mills about 150,000,000 feet, of which 100,000,000 is sold waiting spring delivery, and the balance is unsold. From all I can learn there seems to be a great scarcity of the low grade lumber, absolutely none in first hands, and what is available being held by dealers for distribution. The comparison with previous years follows : 1899, 120,000,000 feet ; 1900, 216,349,000 feet ; 1901, 181,000,000 feet ; 1902, 170,000,000 feet ; 1903, 150,000,000 feet.

PROBABLE PRODUCTION OF 1904 LOGS.—I estimate this at 420,000,000 feet.

The answers to the enquiry as to whether last year's prices would be maintained or not, are unanimous that they would, and a good many are looking for a 10 per cent. increase, and one has to consider that the increased cost of log production this winter in the greater portion of the district will require fully a 10 per cent. increase to be in the same position as last year.

It is of interest to look for a short time at the statistics given for the competing points of the United States. The figure given for the states of Michigan, Minnesota and Wisconsin are as follows :

PRODUCTION.—1899, 6,056,508,000 feet; 1900, 5,485,261,000 feet, decrease 571,247,000 feet; 1901, 5,336,448,000 feet, decrease 48,813,000 feet from 1900 ; 1902, 5,294,395,000 feet, decrease 42,053,000 feet from 1901 ; 1903, 4,791,852,000 feet, decrease 502,543,000 feet from 1902.

STOCKS ON HAND (Same Period.)—1899, 2,728,271,000 feet ; 1900, 2,839,706,000 feet, increase 111,435,000 feet; 1901, 2,388,256,000 feet, decrease 451,450,000 feet ; 1902, 2,112,719,000 feet, decrease 275,537,000 feet ; 1903, 1,964,532,000 feet, decrease 148,187,000 feet. Total decrease since 1900, 875,274,000 feet.

In reference to these districts I would like to call your attention to the fact that it is the first time since 1879 that their output had dropped to the 4,000 million figure. In 1899 it stood at 4,806,943,000. The highest point was reached in 1890, being 8,597,623,000, and the falling off in 13 years to 1904 has been 3,805,771,000 feet or 44.26 per cent., the decrease being steady since 1898.

The cut of hemlock for the same period in the same district is as follows :

Total Cut—1889, 868,410,000 feet ; 1900, 1,166,288,000 feet ; 1901, 1,264,943,000 feet ; 1902, 1,277,814,000 feet ; 1903, 1,334,404,000 feet. Increase from 1899 to 1903, 465,994,000 feet in total cut.

Stocks—1899, 287,820,000 feet ; 1900, 622,312,000 feet ; 1901, 574,406,000 feet ; 1902, 441,634,000 feet ; 1903, 515,935,000 feet.

A communication was read from Gillies Bros., of Braeside, regarding the freight rates on cedar railway ties and lumber, and urging that the Association take up the question with the railway companies with a view to obtaining the removal of the present discrimination against cedar products ; also one from the British Timber Trades Federation regarding the cutting of lumber to meet the particular requirements of the British market.

The president submitted his annual address, which was, in part, as follows :

PRESIDENT'S ADDRESS.

It is a pleasure to me as President of the Lumbermens' Association of Ontario to welcome so large a number of the members of the association and also to welcome the prominent gentlemen who are with us as guests at our annual meeting.

The conditions which prevail to-day in the lumber business in Ontario are in most respects similar to those which obtained a year ago, and it is felt from present appearances that the prices will be in most respects similar to those of last year. In fact, we hear that in the Ottawa district some lumbermen have secured an advance of 10 per cent. on sales already made and they are holding out for this advance for future sales.

The lumber market has been such that the cost of banking logs is fully as great, if not greater, than it has been heretofore. There has been virtually no variation in the cost of supplies or horses.

Unfortunately for the lumber business, this winter's severe weather has greatly retarded all industries, as a result of which we are at a loss to estimate the exact bearing the delayed shipments of lumber will have on the future outlook of the trade. It is a very difficult matter to consume a twelve month's supply of lumber in the space of ten months, and the shipments of lumber for the past two months have been practically nil. As against this, however, there is the fact that in some districts, owing to the heavy snow storms, comparatively small stocks have been taken out for the current year.

It is a fact, however, that the railroad equipment is hardly sufficient for the demand, as lumbermen at all seasons of the year experience delay and difficulty in obtaining cars. This matter your Committee is taking steps to have laid in proper shape before the railway authorities.

It affords us pleasure to recall the result of the Government sales held in December last, at which several features were worthy of note, among which we might mention, first, the fact that Mr. Thomas Mackie, M.P., paid at the rate of $31,500 a mile, which is the highest amount ever paid in Ontario for standing timber; second, the sale realized in all the sum of about $3,700,000, which is the largest amount ever realized at any sale of standing timber held in the Province; third, the Crown dues and annual rentals were larger than had previously existed, and the timber sold was limited strictly to pine and to a period of fifteen years. The sale as originally called specified a ten year limit, but your Board of Management waited upon the Government and secured an additional five years—although we urged the Government to make the time twenty years, which, in our opinion, is a sufficiently short period.

The perusal of the records of the sale shows that the timber limits were sold to a large number of individual operators, and this, we feel, is a guarantee that the prices paid would be held with a firm hand even should a depression come, as there are no large holdings in any place that would be forced on the market in such a way as to cause a depression or slump in the value or price of standing timber for the future.

We are pleased to note that the present season's output in as far as can be ascertained shows a reduction of 25 per cent. on the output of a year ago. This, together with the assured outlook for building operations, not only in the cities and towns of Ontario, but also throughout the rural districts here as well as in Manitoba and the Northwest, added to which we might mention the large public works already under way and in contemplation and the large influx into Canada of immigrants of some substance both from Europe and the United States who are settling in New Ontario and throughout the West—these conditions with others that might be mentioned will be sufficient, we feel, to tide us over to a very large extent the dull times which are already being felt across the line.

Our Association should as soon as practicable take into consideration the question of establishing a standard for the grading of the lumber products of Ontario in such a way that the grades would be uniform and have a recognized standard in the markets both in Ontario and in the importing countries to which our stocks are shipped.

The President added in substantiation of his remarks as to the restricted log production, that last year 223,000,000 feet of new logs came through the Spanish river booms, while this year the estimated quantity was 146,000,000 feet.

Mr. John Bertram said he thought the time had arrived when the question of perpetuating the lumber business should receive consideration. According to the estimates of the Department of Crown Lands, the Government would not say that they had more than 10,000,000,000 feet of white pine timber still unsold. Assuming this estimate to be correct, it meant that the supply would not last much over ten years, and it was very necessary that if the lumbermen were to continue in business they should operate their limits with great conservatism. He urged that as far as possible individual operators should restrict their cut. He was much impressed with the fact that certain lumber firms in the United States were employing expert foresters to investigate and recommend such plans for the operation of their timber tracts as would produce the best results, having regard to the perpetuation of the business. One firm had voluntarily redneed their cut from 40,000,000 feet to 20,000,000 feet annually, and expected to be able to continue lumbering indefinitely.

Mr. Bertram said the policy of selling the pine timber only would soon lead to the extinction of the pine, for pine would not grow under the shade of hardwoods. He had seen pine trees 30 years old less than an inch in diameter, the reason being that the conditions for growth were unfavorable. The sun must get to the soil before the pine seeds would germinate. He suggested that the Government should change their regulations so as to permit of the cutting of other timber, which would then give the pine a chance to grow. It was his intention to cut all the coniferous trees on his own limits from a forestry standpoint. He thought there would in the near future be a demand for all classes and sizes of timber and that nothing need be permitted to go to waste.

Mr. John McLelland expressed his approval of Mr. Berrtam's remarks, adding that in Germany the settlers were interested in forestry and in the perpetuation of the timber supply. He cited examples of pine growth on rocky lands to show that pine timber would grow where there is very little soil.

After further discussion, in which Messrs. Watt, Turner and others took part, the following resolution was unanimously carried:

"Moved by James Playfair, seconded by W. B. McLean, that a special committee of five, consisting of Messrs. W. D. Lummis, Robert Laidlaw, and A. A.

FOR THE CAMP—

We have a very suitable lot of goods for camp supplies. We make this kind of trade a specialty. You who are not getting suited just as well as you would like, try us for your next order, and give us a chance to demonstrate our ability to give you satisfaction in this very important department of your business.

H. P. ECKARDT & CO.

Wholesale Grocers - - TORONTO

Wright, of Toronto, John McLelland, of Parry Sound, and D. L. White, jr., of Midland, be appointed to consider and report to a meeting of the Association on the policy of the Department of Crown Lands in selling the pine only to license holders, and to investigate if it would not be better forest policy to encourage the cutting of hardwoods and coniferous trees, and in this way give the young pine an opportunity of propogating itself and greater assistance in reaching sound mature growth than is possible under the present regulations."

As affecting the car shortage, it was stated that there is probably 1500 car-loads of lumber waiting shipment along the line of railway between Orillia and Midland. The following resolution was adopted :

"Moved by W. P. Bull, seconded by Robert Laidlaw, that the Board of Management take such steps as may be necessary to lay before the Railway and Transportation Commission and railway authorities the views of this Association as to the shortage of cars and the freight rates on railway ties and cedar posts and lumber, as outlined in the letter from Gillies Bros., of Braeside."

A discussion arose as to the advisability of the members of the Association meeting together more frequently, and arrangements may be made for monthly meetings, to partake somewhat of a social character. Such meetings would afford an opportunity of discussing trade conditions, even if there should be no important association matters to be considered.

The Board of Management and officers of last year were re-elected, as follows: President, W. D. Lummis, Toronto; first vice-president, R. Laidlaw, Toronto; second vice-president, Geo. Thomson, Goderich; secretary-treasurer, W. B. Tindall, Toronto; J. B. Miller, W. B. McLean, W. P. Bull, Toronto; R. H. Roys, Sandwich; James Playfair, D. L. White, jr., Midland; W. J. Sheppard, Waubaushene; W. J. Ard, South River.

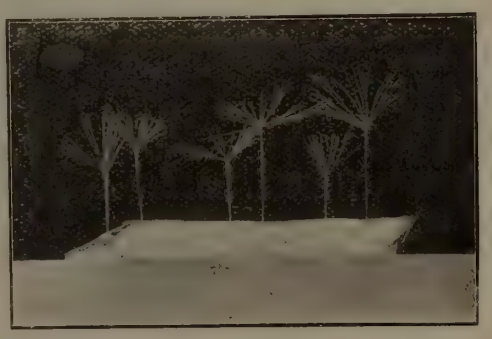
WHITE PINE SAPLINGS.

The white pine saplings represented by the accompanying illustration were grown by Mr. Marcell Hoehn, of Berlin, Ont., who exhibited two specimens at the recent forestry convention in Toronto. They were less than eleven months old and about three inches in height.

Concerning the experiment, Mr. Hoehn, who is deeply interested in the subject of forestry, writes THE CANADA LUMBERMAN as follows:

"The seed was sown on April 28th, 1903. They germinated in a couple of months, and the fact that I had pines three or four inches high, proves that the seed does not require years to germinate as is generally supposed. These plants received no particular attention, as I simply sowed the seeds in a few of the unfrequented spots in the town park of Berlin. I simply cleared away the dead leaves, then scattered the seed broadcast and covered the seed with a light covering of the dead leaves which lay on the ground. I certainly felt interested in this, and I watched carefully the progress of the seed sown.

At the end of 40 days from the date of sowing I first noticed that the seeds were beginning to germinate. At the end of 60 days the seeds had sent up a tiny stem one-fourth inch high.



PINE TREES GROWN FROM SEED SOWN APRIL 28, 1903.

I noticed that the seed sown on hardwood soil made better progress than that sown on pine or light soil. You will please note that these plants were grown in among the trees in the park, as stated before, and in such places which were more or less shaded, and no doubt the results might have been still more favorable had the seed been sown in open ground, but my experiments led me to believe that to sow in the fall or spring of the year in soil prepared for same, and left untouched until such time as the small trees need thinning, is the proper way to grow pine trees. You need not fear that the trees will be hindered in their growth by the grass which will grow up among them, but on the contrary, it will rather facilitate their growth."

The Scott Lumber Company, of Fredericton, N.B., have completed extensive improvements to the Victoria saw mill and expect to commence work this month. They intend building a new shingle mill this spring.

H. A. Jones, representing certain capitalists, is making arrangements for the erection of a large saw mill on Burrard Inlet, Vancouver, B.C., work on which will be commenced, it is said, as soon as foreshore rights are granted.

PERSONAL.

Mr. T. C. O'Rourke, a well known lumber merchant of Chatham, Ont., died last month.

Mr. Alexander McLean, of Ottawa, has been appointed Canadian Commercial Agent in Japan. Mr. McLean was at one time joint owner of the Montreal Herald.

Mr. W. E. Spashett, foreman of the Windsor Turned Goods Company, has accepted the position of superintendent of the Crown Lumber Company, of Woodstock, Ont.

Many persons learned with regret of the recent death of Mr. Nicholas Murphy, which occurred in Montreal. Mr. Murphy was for some time manager of the Batiscan mills for Price Bros.

Mr. J. B. McWilliams, Crown Timber Agent, Peterborough, Ont., received a scalp wound as the result of a railway accident near Sault Ste. Marie, but we are pleased to learn that he has now almost recovered.

Mr. J. G. Jardine, Canadian Trade Commissioner, who has been in Canada for some time, will leave on April 20th on his return to South Africa. He is at present in Toronto, his address being 11 Colborne street.

Mr. Alexander Gibson, sr., New Brunswick's lumber king, had the misfortune to fall down the whole length of a flight of stairs at his residence at Marysville, sustaining quite serious injuries. Though in his eighty-fifth year, Mr. Gibson has of late been in the enjoyment of excellent health, and his numerous friends will rejoice to see him around again in a short time.

The capital stock of the Blonde Lumber Company, Chatham, Ont., has been increased from $80,000 to $150,000.

WOOD PULP DEPARTMENT

THE METABETCHOUAN PULP COMPANY.

The Metabetchouan Pulp Company, of Quebec, have under construction at St. Andre the preliminary work for a pulp mill. The dam, which has been completed and which is shown in the accompanying illustration, is 464 feet long and 27 feet high, and is estimated to produce 7,000 horse power. The mill, which will be built this spring, will have at the beginning nine grinders, and it is proposed to manufacture thirty tons of cardboard per day.

A branch railway thirteen miles long, connecting the mill with the Lake St. John Railway, has just been completed.

The company has the complete control of the

WORKS OF THE METABETCHOUAN PULP COMPANY.

Metabetchouan river above St. Andre, which is situated nine miles from St. John. Two other powers, each 7,000 horse power and situated respectively seven and eight miles above St. Andre, are also the property of the company.

Twelve miles from St. Andre the company has 175 square miles of timber limits extending along each side of the river, all in virgin forest and heavily wooded with gray and black spruce. In addition the company will get the benefit of at least one hundred square miles of timber limits around St. Andre, where the settlers are beginning to clear the land.

The president of the Metabetchouan Pulp Company is Mr. A. Racine, and the secretary Mr. J. E. Caron, both of Quebec.

The Methot's Mill Lumber Company has been formed at St. Agapit, Que., for the manufacture and sale of pulp wood.

PAPER FROM PINE REFUSE.

The Wood Distillates and Fibre Company, capitalized at $500,000 and incorporated under the laws of Arizona, has been organized at Chicago to do business in Louisiana and the Southwest. It has for its object the utilization of the refuse of hundreds of saw mills throughout the State, which means a new source of revenue to the lumbermen.

For years millions of dollars worth of pine refuse has been used for fuel by the saw mills, because there was no other disposition to be made of it, and for several years efforts have been made to discover some process by which this refuse could be turned into money, along with the stumps in the field. Several processes have been brought to the fore during the last few years, but they were too expensive and the results in many cases were unsatisfactory. It is now stated upon good authority that the cost of these plants has been materially reduced, and it is possible to utilize every pound of the saw mill refuse.

Charles M. Dobson, a consulting engineer, has made a study of timber conditions the last two years, and has secured data bearing on the subject of refuse at the mills, showing that there will be ample material to work on for years to come, and that by this latest process turpentine, pine tar, wood alcohol, lime acetate and fibre can be produced from it. The fibre is to be used for the manufacture of brown wrapping paper, such as is used by grocers and butchers.

Mr. Dobson stated recently that there was no question as to the success of the enterprise, as nearly every one interested in it is a lumberman, who realizes what a plant of this kind means to the lumber interests of this section. Several of the larger saw mills in the vicinity of New Orleans have been making enquiries into the different processes for utilizing the refuse of their mills, and a plant is now in operation at Hattiesburg, Miss., with another being installed at Lumberton.

Mr. Dobson says: "We can utilize every pound of this refuse, a cord of which shows the following result under test: Turpentine, fifteen gallons, ten gallons crude; 160 pounds acetate of lime, six gallons wood alcohol and one barrel of tar, with a gross value of $23.25, and all this material is now going to waste here, as it has been ever since yellow pine became an established industry in the State. In addition to the above products, each cord of this refuse will net two tons of fibre for paper making. It is our purpose to make one of our plants an adjunct to every saw mill in this section."

PULP NOTES.

At the annual meeting of the Canada Paper Company, held recently in Montreal, it was stated that the pulp and paper mills at St. Francis are operating successfully and the prospects for the coming year are considered to be promising.

R. C. Ferguson is credited with the statement that all the calculated output of the Oriental Power & Pulp Company at Swanson Bay, B. C., has been disposed of. The erection of the mill, which is estimated to cost $1,000,000, will be commenced this spring.

The Peribonka Pulp Company recently elected the following directors: President, Hon. A. Robitaille; Vice-President, N. Bernatchez; Secretary-Treasurer, A. E. Vallerand; manager at Peribonka, T. D. Tremblay; assistant-manager at Roberval, P. A. Potvin.

Mayor Johnston, of Parry Sound, Ont., and associates have applied to the Ontario Government for the lease of a valuable water power at Canal Rapids, on the Magnetawan river, near the Georgian Bay. The proposal is to build a large pulp mill and other industries.

The Labrador Electric & Pulp Company, of which A. E. Beauvais, 7 la St. James street, Montreal, is secretary-treasurer, recently invited tenders for $50,000 six per cent. debentures, secured by first mortgage on a water power of the company at Murray Bay, Que., and on the plant generally.

The North Shore Power, Railway & Navigation Company, of which Mr. Thomas Meaney is manager, will resume operations on construction work as soon as navigation opens. Ten miles of railway have been completed and much headway has been made towards the construction of a dam, pulp mill and other buildings.

The Maritime Sulphite Fibre Company's properties at Chatham, N.B., were sold by auction on February 25th to the Bank of Montreal for the sum of $120,000. There were two other bids, $100,000 and $110,000. The referee in equity accepted the bank's bid, thereby confirming its title to all the property, including the lumber rights in 262 square miles of timber limits. Negotiations for the sale of the property to American capitalists are in progress.

The Ontario Government has granted a pulp concession to the Dryden Board Mills Company, Limited, of Dryden, Ont., of which T. A. Gordon and Chas. B. Gordon are president and secretary respectively. The company agrees to expend $200,000 in the erection of a pulp and paper mill which shall have an output of thirty tons of pulp per day and be commenced within six months of the date of ratification and completed within two years. The company receives the exclusive right to the water power of Wabigoon Falls, near Dryden, estimated to yield 2000 horse power, also the exclusive right for twenty-one years to cut pulp wood on certain timber lands on the Wabigoon river, the stumpage dues to be charged to be 40 cents per cord for spruce and 10 cents per cord for poplar and other inferior pulpwoods.

PRACTICAL SAW TOPICS.

Saw filers should be interested in any method or machine or tool that is well calculated to improve or facilitate saw fitting. Their service is mental and mechanical rather than physical. Hence, intelligence and skill in a filer are better recommendations than physical strength, or a disposition to hammer and file from morning till night. It is not a question of quantity but quality of work.

The quantity and quality of the lumber cut, and the steady employment of the common labor, depend largely upon fine fitting of the saws, and the filer is therefore a profitable or profitless man for his employer.

Mill men and factory operators are rapidly coming to appreciate the importance of a perfect filing room equipment and are usually ready to buy anything calculated to improve or facilitate the filer's work, if they have confidence in his ability and judgment. There are never too many good men in any calling, and with regard to saw filers, the good filer is the one who makes his services indispensable to his employer. Such a man can command his price.

Every saw filer should seek to become well informed, in the broadest possible manner, upon everything pertaining to his trade. The experience of no one man is universal, hence the need of constant effort to familiarize one's self with all changing conditions in saw and mill management and operation, that, as each new condition arises, one may better meet it successfully. The competent filer or sawyer should understand millwright work, at least to the extent that he may ascertain when faults lie in the saw, in the mill, the carriage, the track or any portion of the plant directly under his personal supervision. Defects may lie in any one of these places which, if not remedied, will render only partially effective the best efforts tending to improvement in the care of saws.

The service of a filer may be invaluable at $3 to $8 per day, or expensive at $2 per day. One filer may increase the cut of well-manufactured lumber from 2,000 to 10,000 feet per day; another may not only lessen the average cut but also impair the quality of the output, a double loss.

LUMBER IMPORTS HEAVY.

For the enlightenment of those who may contend that the quantity of lumber imported into Canada from the United States is insignificant, we append a statement showing the value of timber and lumber products imported during the month of December last. The figures are obtained from the unrevised monthly statements of imports and exports compiled by the Dominion Government and are no doubt approximately correct. The total quantity of ordinary lumber imported during that month exceeded 14,000,000 feet. Multiplying these figures by twelve would give a total annual importation of 168,000,000 feet. It is fair to assume that the importation during the month of December was below that of an average month owing to climatic conditions, freight blockades and the consequent partial suspension of work in which lumber is consumed. The figures therefore may be regarded as conservative. The items follow :

Sawed or split boards, planks, deals and other lumber	$133,835
Logs and round unmanufactured timber	11,168
Timber or lumber, hewn or sawed, square or sided	20,408
Cherry, chestnut, gumwood, hickory and whitewood	34,523
Mahogany	11,166
Oak	115,561
Pitch pine	38,740
Spanish cedar	310
Sycamore	20
Walnut	3,222
White ash	4,926
Red cedar, satin wood, etc.	41
Pine and spruce clapboards	$ 60
Laths	1,830
Shingles	995
Staves	19,034
Fence posts and railroad ties	20,939
Hubs for wheels, posts, last blocks, etc.	909
Hickory spokes, rough turned	20,375
Handle, heading, stave and shingle bolts	1,799
Felloes of hickory wood	780
Shovel handles	2,108
Corkwood	5,263
Total	$448,012

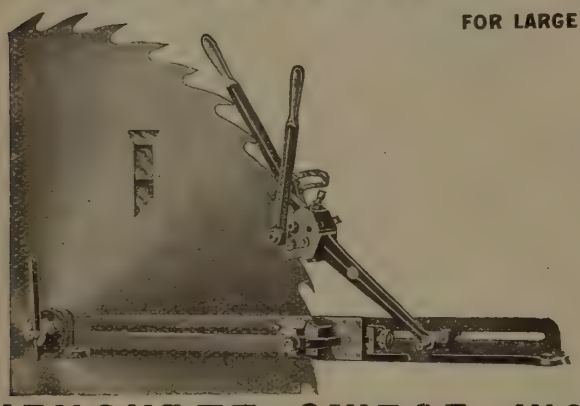
THE HANCHETT ADJUSTABLE SAW SWAGE

FOR LARGE AND SMALL CIRCULARS, BANDS, GANGS, CYLINDERS, AND BAND RESAWS.



FILERS.

A few of the reasons why you should have a Hanchett Swage in your filing room are:—They will wear a life time, are rapid to operate, do good work, adjustments are perfect, and easily made. They are compact, solid and strong. The anvil die is of such a shape that it may be easily and accurately ground, which is necessary to keep any Swage in perfect working order.

A REMARKABLE CATALOG.

Probably the best known piece of saw mill literature ever published was William E. Hill & Company's 1901 catalog, better known as "A Trip Through a Saw Mill." This catalog was a direct departure from every other manufacturer's standard in arrangement and description, and was a noticeable improvement over all others in illustration, paper and presswork.

This, however, is an age of progress, and the catalog which caused so much favorable comment three years ago is now obsolete. In its place we have the 1904 catalog, issued by the same firm, which is as far ahead of their last one as that one was ahead of all others. It is a book of 132 pages, sumptuously bound in dark brown, printed on heaviest plate paper from new clear type, and in fact from a printer's standpoint is perfect. The cuts, of which there are 130, would not seem out of place in an edition de luxe.

A great many mill men imagine that William E. Hill & Company only build steam niggers, and these will be surprised to find that they make every kind of machinery that goes into the biggest and most up-to-date mills. They are prepared to furnish complete machinery outfits and draw up plans and specifications for any kind of mill. Among the machines illustrated are their line of band mills, circular mills, carriages, edgers, splitters, etc.

The arrangement is, generally speaking, the same as in their last catalog, and the reader takes a veritable "trip through a saw mill", starting with the haul-up, and ending at the other end of the mill. Almost every subject is treated with a completeness that makes the book a work of reference for the mill men. Ten pages are devoted to jackers and car haul-up rigs and thirteen different styles are shown, each described in detail. The section devoted to carriages, set-works, etc., is the most complete ever published, and the same is true of the parts which describe edgers, trimmers and lath machinery. A section which will be of interest to stave, shingle, pulp or cord wood mills is the one headed, "Machinery for Cutting and Handling Logs and Wood." Here are described many styles of cut-off machines, including the famous "Hill Steam Drag Saws," also steam dogs, steam splitters, heading, bolters, etc. The last division of the catalog is devoted to power transmission, conveyor rigs and drives, etc. Here you will find all standard power transmission tables and a number of standard conveyor drives never before illustrated, each one of which is described in detail. This was never tried until now and this feature alone makes the book a most valuable one.

Taken as a whole this catalog is the finest we have ever seen and is a credit to the enterprising firm which issued it. It is worth dollars to every mill man, but will be sent free to anyone interested who will address William E. Hill & Co., 415 North Rose street, Kalamazoo, Mich., and ask for Catalog B. In writing kindly mention this paper.

MADAWASKA LOG DRIVING COMPANY.

A meeting of the Madawaska Log Driving Company was held at Van Buren, Me., on March 9th, for the purpose of electing directors and transacting other important business.

It was the aim of the St. John Lumber Company and the Van Buren Lumber Company to elect directors enough to control the company, which drives all the logs on the St. John river cut above Grand Falls. This influence the milling companies (whose plants are situated a few miles above Grand Falls on the American side) intended to use with the object of placing piers and booms at Van Buren to stop all the logs on their way down river and separate their own. This, of course, would have meant a severe blow to all the lumber manufacturers whose mills are situated below Grand Falls, for considering the limited season of freshet during only which the logs can be driven, a delay for sorting purposes would mean an almost certain hang up this and ensuing years. The manufacturers of the Lower St. John resolved to combat these intentions and accordingly Mr. Geo. V. Cunliffe, of Fort Kent, Me., attended the meeting armed with proxies from all these gentlemen. Each 100,000 of logs in the river above Grand Falls or cut and in the woods entitles the owner thereof to one vote. The result was that the lower country operators succeeded in electing as directors Messrs. G. V. Cunliffe, John Sweeney, Neil McLean and John Kilburn. Mr. F. Brown was the only representative of the milling companies elected. The first four gentlemen named are contractors on a large scale for St. John City mill owners. The contract for driving the logs was awarded to Messrs. L. W. & E. W. Pond.

It was announced that the season's cut above Grand Falls amounted to 120,000,000 feet, which with the lumber hung up last season made a total of 165,000,000 feet. Of the total, 25,000,000 is for the St. John Lumber Company and 16,000,000 for the Van Buren Lumber Company. The balance will go to the Fredericton booms.

MOUNTAIN LUMBER MANUFACTURERS' ASSOCIATION.

The Mountain Lumber Manufacturers' Association held their annual meeting at Cranbrook, B.C., recently, at which the question of tariff was very fully discussed. It was decided to memorialize the Dominion Government for further protection against the unfair competition of United States mills. The demand in this respect is an exceedingly modest one, and is only necessary on account of the special conditions which exist in respect to competition in the North-West and Manitoba. The United States manufacturers have had a surplus of lumber, and sooner than sacrifice that surplus in their own territory they have dumped it into the Canadian North-West and thus saved their own market from demoralization. It is only fair to Canadian industries that they should be protected from such competition.

TRADE NOTES.

The Albion Iron Works Company, Limited, of Victoria, B.C., has been re-incorporated, with a capital of $500,000.

At the annual meeting of the Canadian Rubber Company held in Montreal last month, the election of directors resulted in one change, Mr. J. O. 'Gravel retiring and Lieut-Col. Prevost succeeding him.

Ross & Howard, who conduct a large foundry and manufacture saw mill machinery, boilers, engines, etc., at Vancouver, B.C., contemplate a large addition to their plant. They have asked the City Council for a bonus of $100,000.

"CHAMPION" SAWS AND GAS ENGINES.

The Champion Saw Company, of Beaver Falls, Pa., was organized in 1887 and re-organized in 1897 under the name of "Champion Saw & Gas Engine Company," with a capital stock of $100,000. At this latter time in addition to saws, they began the manufacture of the Champion gas and gasoline engines. They have had marked success in both departments and are to-day producing saws and gas engines that have no superiors. Their saws are manufactured from the best grade of saw steel and their patent method of tempering saws gives to this steel life and toughness.

Hammering a saw to the proper tension to suit the speed and feed of the mill is very important. In this they excel, as all their saws are examined by an expert before leaving the factory. These claims for their saws are substantiated by two of the many testimonials they are receiving all the time.

Bancroft, Sons & Company, of Orange, Texas, write as follows: "We have been using your saws for years and so far are well pleased with them. They give entire satisfaction. Ship us as soon as possible two 56 in., 6 gauge straight, solid tooth saws, with 90 teeth, speed 800, feed 12 in. Make them exact duplicates of those already received."

R. R. Howell & Co., Minneapolis, Minn., in a letter dated June 9th, 1903, write: "Regarding the saws which we have been purchasing from you now for several years, will say that they have given the very best satisfaction to our customers. We use your saws exclusively on our entire line of saw mill and woodworking machinery. During our long business career we have used all the leading makes of saw blades, but we must say candidly and sincerely that your saws have given better all round satisfaction than any of them. This is an important item for us, for thereby they assist us in selling our saw mills, for there have been cases where parties would condemn a whole outfit of saw mill machinery simply on account of defective saw blades. Nothing of this kind has happened since we have been using your saws. We are very much pleased with them and our intention is to continue the use of them. We have been buying from you heavily for several years because we are not only manufacturers of saw mill machinery, but also jobbers of all kinds of saw mill supplies. We are purchasing from you every year about 600 to 700 various kinds of saw blades."

They also manufacture the Champion chisel bit saw, one of the best inserted tooth saws on the market. The holders and bits receive all the wear, thus protecting the blade, and the bits are so fitted that they cannot fly out and cause the trouble that so many users of inserted tooth saws experience. We quote below from one of the many letters they receive, showing what their customers think of these saws: "I am pleased to say that my saw is a good one and cannot be beat. It is the best one I have run in my life and there is no better made. Signed, J. W. Baylor, Eby, W. Va."

They also have special facilities for doing repair work and have recently lowered their prices on this work very materially.

The Champion Saw and Gas Engine Company manufacture the Champion gas engine, which is conceded to be one of the best gas engines on the market, being constructed on scientific principles. They are simple and for durability, efficiency and economy in use of fuel, have no superior. The power produced by the gas engine is claimed to cost less than one-fourth that of steam power. It can be used successfully for any purpose where power is needed. Hence if you are in need of anything in their line, send for their catalogs and prices. Their sizes range from 2 h.p. to 75 h.p., and are fully guaranteed.

Mr. S. Pomeroy is adding to his planing mill at Orillia, Ont., an engine room, and is installing therein a new engine and boiler. He is also putting in a new dry kiln and otherwise improving the plant.

Mr. John D. Sinclair has taken over the new double cutting band mill of the British Columbia Box & Lumber Company at Vancouver, and is now prepared to fill orders for cedar lumber and shingles on short notice. He makes a specialty of kiln-dried lumber and edge-grain cedar and spruce.

Mr. G. P. Altenberg, manager of the foreign department of J. A. Fay & Egan Company, is on his way to Europe. He will first visit England a few weeks, and will then tour the continent. Letters will reach him if addresed as follows: G. P. Altenberg, No. 31 Boulevard Haussmann, Paris, France.
